

# Are You Open To A New Point Of View?

**N**ow more than ever, you need the most advanced and powerful network management software you can find.

That's why so many network managers today are switching to Network/I<sup>TM</sup> Pro. Because it gives you total control—exactly what you need to deliver the quality of service your users have all been demanding.

Not only can you identify the impact network problems have on your business, you can resolve them before users are ever affected. Network/I Pro optimizes performance, provides enhanced manageability, and dramatically reduces downtime.

It also provides substantially more functionality than any other network management solution. Whether it's ATM, Frame Relay or Switch, TCP/IP or IPX, DECnet or SNA, Network/I Pro gives you a consistent way to manage your entire network, across any platform, protocol, or network operating system.

Network/I Pro views your entire network from a business perspective.

And with its centralized, policy-based approach, aligning network management to business objectives has finally become a reality.

Best of all, Network/I Pro is part of CA's family of acclaimed management products built on a common

framework. So, as your role evolves to encompass other enterprise requirements, you can incrementally implement additional solutions in an integrated fashion. Just what you would expect from the industry leader in network and systems management.

To change your network management point of view, visit our website at [www.cai.com/ads/networkipro](http://www.cai.com/ads/networkipro) or call 1-877-2 GO FOR IT.

## IT'S A LINUX WORLD

4 The world's largest hotel franchiser, impressed by Linux's stability, is rolling it out at 4,000 sites.

12 SAP hops on the Linux bandwagon, planning a version of R/3 for it.

12 Linux users want enough standards to keep it from fragmenting, but no real limits.

34 Linux breaks the rules, but CIOs have to take it seriously anyway, Dan Gillmor argues.

74 Sure, it's all over TV and the news, but Linux is still just software, Frank Hayes writes.

## AT DEADLINE

### Air-Traffic Control Upgrade Late

The U.S. Federal Aviation Administration's air-traffic control modernization project is six years behind schedule and \$100 million over budget, the agency conceded last week. The 4-year-old project is expected to cost more than \$1 billion and take 15 years to complete. Separately, the FAA said it expects to finish all year 2000 certification by July.

### Think Tank on Y2K Law Formed

A new group has formed to address year 2000 legal issues. It's composed of professors from 175 top universities, members of U.S. and U.K. think tanks, individual consultants, law firms and other professional services firms. Round Table Group Inc., a consortium of consulting professors in Chicago, initiated the effort.

### Raytheon Seeks Online Users' IDs

Defense contractor Raytheon Corp. in Lexington, Mass., has gone to court to get Yahoo Inc. in Santa Clara, Calif., to turn over the identities of 21 message-board headers who Raytheon believes - but can't prove - are Raytheon employees discussing confidential company information. Spokesmen for Yahoo, which hosts the boards, declined to comment.

### Short Takes

Porto-based telephone equipment maker ALCATEL SA last week agreed to acquire LAN switch and WAN products vendor UTM and CORP. in Colabene, Calif., for about \$2 billion. . . MICROSOFT CORP. plans to ship by midyear a service pack that, among other things, will prevent Windows 95/98 PCs from freezing after 48.7 consecutive days of operation. . . Linux hardware, software and services vendor IUS RESEARCH INC. plans to build a portal site around its newly acquired Web address (www.ius.com). It will use Dandelion Corp. to provide on-site services.

# IS TIME ON INTEL'S SIDE IN FTC TRIAL?

Some say changes in PC landscape since FTC filed suit aid chip maker's defense

BY STACY COLLETT

**A**S INTEL CORP. prepares to face off against the Federal Trade Commission (FTC) in court tomorrow, observers say changes that have occurred in the PC industry since the suit was filed last June will work in Intel's favor.

For example, in January Intel was knocked out of the No. 1 position in desktop PC processors by Advanced Micro Devices Inc. (AMD) in Sunnyvale, Calif. AMD's chips now reside in 44% of all U.S. PCs sold — as compared with Intel's 40%.

And resellers for the company's products have been boldly stepping up to the plate to demand changes in some system components.

#### Unbowed

Meanwhile, some observers say Intel toned down its market-leader arrogance after it was sued by Huntsville, Ala.-based Intergraph Corp. more than a year ago for allegedly cutting off the workstation market from technical information and chip prototypes after Intergraph demanded royalties for its intellectual property.

"The market dynamic is changing," said Rob Enderle, an analyst at Giga Information Group Inc. in San Jose, Calif., who added that Intel is now feeling the heat of competition in the microprocessor market.

When dealing with monopoly cases, antitrust guidelines consider the ease of entry that competitors have in the market and how quickly the industry's technology is changing.

"What often looks like a position of insuperable market power may be undercut because technology just leapfrogs," said Tyler Baker, an attorney and former lawyer at the Department of Justice antitrust division.

It's also helpful — although antitrust and intellectual prop-

erty rights are well-established — that the question of how to apply these laws in the high-tech industry, where the principal asset is knowledge, is uncharted territory, according to Baker.

The FTC alleged in a suit filed last year that Intel monopolized the market for microprocessors by withholding the right to use its intellectual property from three companies — Digital Equipment Corp. in Maynard, Mass., Compaq Computer Corp. and

Intergraph — after the three companies had either sued or threatened to sue Intel for patent infringements.

In its pretrial brief, Intel used the government's economic expert's testimony to bolster its assertion that its actions didn't affect

research or market prices. Attorneys for the chip maker will further contend that Intel didn't violate antitrust laws when it withheld information from customers and that even if it holds a dominant market

position, there is room for competition.

But in a brief filed last week, the FTC countered that ad-

## Cendant Will Book Linux Into 4,000 Hotels

Hotel franchisor eyes low cost, stability of Linux, but says it has its drawbacks

BY DAVID GREENSTEIN

Cendant Corp., the world's largest franchisor of hotels, is rolling out Linux servers at about 4,000 hotels to run the company's hotel management software.

Cendant, whose hotels include Days Inn and Ramada, began the massive rollout early last year and expects to finish in September, said project technical lead Damon Covey.

Most companies are only now becoming aware of Linux, a Unix variant distributed for free or at nominal cost. Few rollouts on this scale have occurred or are planned.

Although Linux's low cost helped influence the franchisor's decision to use it, the operating system's highly regarded stability is what made

the sale, Covey said. He also cited the "ease with which you can make the system Internet-ready."

The servers, running Caldera Systems Inc.'s OpenLinux Version 1.1, will deliver the applications to Windows 95 desktops running a terminal-emulation program. The hotel management software runs all facets of each hotel's operations and integrates with Cendant's central reservation system, Covey said.

The rollout is proceeding on schedule, but Covey said the company has learned that working with Linux can sometimes be difficult. After IBM switched the video card in its PC300GL line of PCs, for example, Cendant couldn't find a Linux driver that would make

vances by AMD and other competitors fall mostly in the low-end PC market, where profits are small. Intel dominates the high end. Also, about 85% of the world's PCs run on Intel chips, despite the loss of U.S. market share.

To date, the FTC has shown fewer examples of Intel's exclusionary behavior than government lawyers did in Microsoft Corp.'s antitrust trial. But, like the Justice Department's case, more evidence may come to light in the course of discovery, Baker said.

Industry watchers don't expect the same smoking-gun e-mails and explosive videotape that rocked the Microsoft trial. "The typical FTC remedy is a cease-and-desist," said Paul Rogers, professor of antitrust law at Southern Methodist University in Dallas.

The commission can also provide guidelines for future behavior. But the more dramatic the remedy, the more likely the case will be reversed on appeal at the federal circuit court level, Baker said. ■

### MORE THIS ISSUE

Intel hopes faster notebook chips will persuade corporate customers to buy more notebooks, fewer desktops. [see page 68](#)

the display work properly. Also, installing application software isn't as easy as on other operating systems, he said.

"Linux is flexible in some areas and archaic in other areas," Covey said. "Until we can do the same things on Linux as we can on Windows 95 with relative ease of use, I'm not sure Linux will ever reach its full potential."

Linux's less-mature setup infrastructure increases the upfront work required to deploy an application, said Andrew Allison, an independent analyst in Carmel, Calif., but companies find the struggle worthwhile because Linux is more stable than Windows NT. ■

### MORE THIS ISSUE

To read more about Linux, see the articles on page 32. Also, turn to page 34 to find out why Dan Gilman thinks IT executives should pay close attention to the Linux variant, and discover the secret about Linux that Frank Hayes reveals on page 74.

## Scarcity of AS/400 Resources a Concern

**Talent, apps for IBM system in short supply**

BY AJAHMUR VILAVAN

Growing concerns about programmer and application availability could dampen some of the enthusiasm surrounding the IBM AS/400's continued popularity at this year's Common user show in San Francisco.

In an international survey conducted by Common (an AS/400 group) asking users to list their top worries in 1999, those two issues ranked as the highest user concerns.

"Total cost of ownership is probably the biggest selling point of the AS/400, but how can that cost remain low when salaries continue to skyrocket due to a lack of available talent?" asked Dean Amussen, president of Enterprise Systems Consulting Inc., a consultant AS/400 user and long-time in Fujitsu-Varina, N.C.

Similarly, there are few new RPG/Cobol packaged applications to replace old packages across most of the AS/400 segments, such as manufacturing, distribution and retail, according to IBM.

Although labor constraints also are being felt in other

areas, "the AS/400 adds a wrinkle in that...there aren't that many new RPG developers coming out of the technical schools or universities," said Michael Crump, a technical project leader at Bell-Foster Glass Container Corp. in Muncie, Ind.

And those in the field are

getting paid more. Figures from Nate Viall and Associates, an AS/400 recruiting firm in Des Moines, Iowa, show that average AS/400 programmer salaries grew by 6.8% to \$47,200 last year.

Added to that are concerns about application availability. Many customers looking to fix year 2000 issues by replacing old AS/400 applications discover that there aren't many

packaged options available and that they need to develop new applications or modify existing ones, said Walt Ling, vice president of AS/400 customer satisfaction at IBM. And many of the new packages require moving to Java, Windows NT or Unix application development environments, Ling said.

IBM's efforts to address those issues include the Partners in Development program, designed to encourage software vendors to port new applications to the AS/400.

A program to get universi-

ties to teach AS/400-related courses launched in 1996 now has 400 participating schools, Ling said.

And the AS/400 continues to rack up sales. Expected AS/400 hardware revenue of \$3.6 billion this year should represent a 10% growth compared with 1998, according to Salomon Smith Barney in New York. ■

## SENATE Y2K PANEL APPLAUDS FIRMS' IRON-FIST APPROACH

**Nestle, Kroger cited for taking extra steps**

BY PATRICK THIBODEAU  
WASHINGTON

**F**OOD GIANT Nestle USA Inc. has been connecting shipping companies both in the U.S. and abroad, warning them that they have to demonstrate year 2000 compliance by May — or else.

The Kroger Co. isn't assuming its 1,400 grocery stores and

34 manufacturing plants will have electric power on Jan. 1, 2000. Company officials are going door-to-door to local utilities to examine their plans for exterminating the millennium bug.

Both Kroger and Nestle won praise last week from the U.S. Senate Special Committee on the Year 2000 Technology Problem because of the pre-tough steps they have taken to address the date rollover

problem. Committee Chairman Sen. Robert Bennett (R-Utah) urged companies to be more aggressive in finding out

how year 2000 will

impact them — and not just rely on survey data. Committee members were openly skeptical of the survey data that industry

groups and trade associations have been bringing them. "People want to hide things; people want to be overly optimistic," Bennett said.

### JUST THE FACTS

The Senate's 100-page report on the year 2000 problem is available at [www.senate.gov/y2k/index.html](http://www.senate.gov/y2k/index.html).

"For anybody who really counts on Nestle as we count on particular suppliers, a survey isn't enough," said Jett Bender, CIO of the Glendale, Calif.-based company Nestle is relying on face-to-face meetings and demonstrations of year 2000 compliance from key partners, she said.

Michael Herschel, executive vice president of information systems and services at Cincinnati-based Kroger, said the company is conducting testing with key partners. Also, officials from various company locations are personally contacting local utilities to make sure "we feel comfortable" with their year 2000 plans, he said.

### Vague Warnings

The Senate committee last week released a 160-page report that offers only general assessments about the impact of year 2000 computer glitches in various vertical industries. For instance, in examining electric utility readiness, the report warns of "possible" outages at some of the nation's 3,200 utilities.

The report is more alarming when it covers international concerns. Flight rerouting "is highly possible" for some foreign destinations and disruptions to global trade are "highly likely," it said. ■

## Unisource: Takeover Unlikely to Squelch IT, ERP Makeover

**Plans to shut down R/3 apps will proceed**

BY CRAIG STEEDMAN

The wild ride continues for Unisource Worldwide Inc. and its IT staff.

A year ago, the \$7 billion paper distributor scrapped a \$108 million SAP R/3 project. Then it began a sweeping makeover of its homegrown systems last summer. And last week, Unisource said it agreed to be bought by an energy company in a \$1.5 billion deal.

At least for now, the planned sale to UGI Corp. isn't expected to derail the information technology overhaul at Berryn, Pa.-based Unisource,

which is consolidating systems and moving more processing to a new corporate data center.

The revamp, part of a wider restructuring aimed at cutting costs by \$150 million per year, also includes a decision announced internally last month — and confirmed by a Unisource spokesman — to shut down R/3 order-processing and logistics applications being used at Unisource's Philadelphia customer service center.

That will bring down the final curtain on what was to be a rollout of the SAP AG software at all 11 of Unisource's regional order-taking facilities.

The Unisource spokesman said it's "just premature at this point" to talk about

a long-term technology strategy under UGI. Unisource CIO Ken Carroll couldn't be reached for comment on the planned acquisition by UGI, a \$1.4 billion propane gas distributor and energy services firm in Valley Forge, Pa.

According to a 10-K form filed in December, Unisource is tossing more than 20 small-scale applications and shifting more work to its corporate data center, which runs about 15% of its computer operations.

It also eventually plans to replace 23 major systems with a single, companywide set of applications. R/3 originally was supposed to be that single logistics and distribution system, but Unisource stopped development work with SAP's software early last year. Instead, the company began to implement year 2000 fixes on its

homegrown systems after its plan to customize R/3 to fit the different operating procedures at individual business units proved too complex.

R/3 did go into use in Philadelphia, and a source said it was working satisfactorily. But Unisource decided maintaining R/3 for one site was too expensive and now plans to replace it by August with an IBM AS/400-based homegrown application that's already used at a customer service center in St. Louis, the source said.

R/3 or other ERP applications are best-suited to being rolled out across a company along with common procedures for all business units, said David Dobrin, an analyst at Benchmarking Partners Inc. in Cambridge, Mass. The cost of running R/3 at just one site "can be prohibitive," he said. ■

## BRIEFS

## Raytheon To Pick Outsourcer

Following a series of mergers and acquisitions, Raytheon Co. is close to outsourcing a significant portion of its information technology operations. The deal is aimed at reducing IT costs by up to 10% by consolidating e-mail and networks. The deal is IBM and Computer Sciences Corp. in El Segundo, Calif. Raytheon expects to make a decision by May.

## New Domain Name Group Starts in May

The Internet's new Domain Name Supporting Organization will manage domain name issues in May, according to the Internet Corporation for Assigned Names and Numbers (ICANN). The U.S. ICANN has announced the registration of top-level domains: .com, .org and .net.

## Net Businesses Not Ready for Set-Tops

By 2002, 5 million digital set-top boxes are expected to be in U.S. homes, but only 25% of the Web's leading electronic-commerce vendors are prepared for the opportunity, according to a study by Jupiter Communications Inc. in New York. The firm said the vendors should partner with cable modem providers and Internet providers.

## Short Tales

REPUBLIC BANK OF NEW YORK has outsourced its data center, help desk, network and communications operations to COMPUTER SCIENCES CORP., ... U.S. CENTRAL CREDIT UNION, the nation's wholesale credit union for corporate credit unions, has hired ELECTRONIC DATA SYSTEMS CORP. in Plano, Texas, to develop a Web-based network that will link 10,000 credit unions, ... INTEL CORP. bought LEVEL ONE COMMUNICATIONS INC. in Sacramento, Calif., in a \$2.2 billion stock swap, ... To protect musicians' copyrights, the EUROPEAN PARLIAMENT has adopted a proposal to require Web sites to get artists' permission before caching content on their servers.

## PC FEATURES AIMED AT CUTTING COSTS

Price of ownership targeted with software that tracks upgrades, easier-to-open boxes

BY MATT HAMBLER

**M**ORE DESKTOP vendors last week offered corporate customers hardware and software features designed to make PCs easier to manage and cheaper to own during their lifetimes.

Several vendors recently have unveiled Pentium III desktop machines that include easy-open chassis for repairs or replacing new circuit cards. In addition, some offer standard motherboard cards that work on different models and CPUs.

The features are intended to lessen the amount of time it takes information technology

staff to update machines with hardware or software or lessen the number of times a new software portfolio must be installed and verified by IT staff during a desktop rollout.

"Offering corporate buyers ways to lower total cost of ownership is one of the last areas of differentiation as desktops become commodities," said Kevin Knox, an analyst at Gartner Group Inc. in Stamford, Conn. "It's a hot area" for the vendors, he said.

Toshiba America Information Systems Inc. in Irvine, Calif., began a year ago to offer new management features, including a motherboard common to three models that's

## Solving Some Money

Desktop management features that can lower ownership costs:

**Common motherboard** that works with several models and CPUs.

**Easy opening chassis**, including on-screen or a side entry.

**Software agents** that record the software portfolio and allow upgrades for new cards or drivers.

usable with 11 CPUs. But Toshiba got little attention until Hewlett-Packard Co. last week announced its common motherboard design with Pentium III machines, analysts said.

Other leading PC makers such as Compaq Computer Corp. and IBM offer software

upgrades that track what applications and settings are included in a standard software image, making it easier to swap out an old device and driver, analysts said.

Greg Houston, manager of PC services at J.D. Edwards World Solutions Co. in Denver, said his company began to use nearly 1,000 new Toshiba desktops last summer, in addition to IBM and HP machines, because the Toshiba's were designed to lower costs. The consistency of the Toshiba motherboard means we don't have to change the software image each time we get a new motherboard," Houston said.

Don Vennema, vice president of IT at Pawtucket Mutual Insurance Co. in Pawtucket, R.I., said the new desktop management features are "a fairly high priority" because upgrades are so common. ■

## Ariba Reduces Hassle in Online Purchasing

Joins trend in simplifying catalog process for suppliers, which in turn helps buyers

BY CAROL SLIVER

Buyer and supplier companies should have fewer hassles in the online purchasing process thanks to business-to-business commerce networks being set up by major Web-based software-procurement vendors.

Ariba Technologies Inc. in Sunnyvale, Calif., considered

to be the market leader by many analysts, last week put its stamp on the trend, unveiling its Ariba.com Network, which promises to make transaction integration and time-consuming catalog management easier for both buyers and suppliers. "It keeps them out in front," said Bob Parker, an analyst at

AMR Research Inc. in Boston.

Other Web-based procurement vendors taking similar tactics include Walnut Creek, Calif.-based Commerce One Inc., which launched its MarketSite last year, and New York-based Intelliplex Electronic Commerce LLC, which plans to launch Intelliplex.com in June.

Ariba's direction comes as good news to early adopters such as Canadian Imperial Bank of Commerce (CIBC) in Toronto and Boehringer Ingelheim Pharmaceuticals Inc. in Ridgefield, Conn. They validate, store and maintain their supplier's catalogs internally.

"It's a burden," admitted Holger Huels, chief financial officer at Boehringer Ingelheim, an Ariba user.

With the Ariba.com Network, suppliers will validate and manage the catalogs and gain the following options:

• Keeping catalogs local in their internal systems.

• Having Ariba.com host their catalogs, which will be stored in data centers run by Hewlett-Packard Co., Ariba's partner in the venture.

Under the current Ariba system, suppliers must make their product catalogs available in Ariba's Catalog Interchange Format, with the customer-negotiated pricing and products.

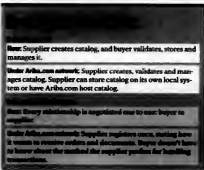

Under the new system, suppliers register once with the Ariba.com Network, and they can indicate how they want to handle transactions — by e-mail, fax, electronic data interchange or the Extensible Markup Language — with any buyers that use Ariba.com.

John Dante, western regional information technology manager at Delray Beach, Fla.-based Office Depot Inc., said the ability to scale quickly to more customers would be an advantage that his supplier would gain from joining the Ariba.com Network.

Suppliers may be able to get up and running more quickly, so buyer companies such as Ariba customer CIBC plan to increase their rosters of suppliers. "This is going to cause us to go back and review whether we should be hosting catalogs or not," said Jack Mills, CIBC's chief purchasing officer. ■

## MORE ONLINE

## Users Laud IBM Megadeal to Supply Dell With Technology

BY MATT HAMLEN

A \$6 billion, seven-year technology pact between Dell Computer Corp. and IBM

could address shortcomings corporate customers said they face with Dell.

In what analysts called the

largest-ever deal of its kind, Dell will purchase IBM storage, memory, networking and flat-panel displays for use in its

computers. The deal could be expanded to include access to many other IBM technologies but isn't so broad that it in-

cludes IBM services, officials from the two companies said. Services once were rumored to be part of the deal, something that would have made the agreement much more important, said Roger Kay, an analyst at International Data Corp. in Framingham, Mass.

"I think the IBM deal will enhance the Dell line, especially if it means they are using a single, strong vendor for more of their parts," said Robert Fillmore, PC administrator at American Cyanamid Co. in Princeton, N.J., which has 2,000 desktops from several vendors.

"IBM definitely helps Dell, especially if it means IBM will freeze the parts Dell leaves in models for longer," added Greg Houston, manager of PC services at J. D. Edwards & Co. in Denver, which has 5,000 desktops, including IBM models.

### Too Many Changes

Houston said business sales for Round Rock, Texas-based Dell are "dragged down now" because the company frequently changes internal components in its machines without issuing a new model, which means companies must spend time and money to update software configurations more often. In effect, Dell is adding work for end users with its incremental changes.

Beyond those issues, the \$6 billion commitment should give Dell a technological edge over desktop competitor Compaq Computer Corp., which will need to find a similar partner to stay competitive, Fillmore said.

A spokesman for Compaq said the Dell announcement doesn't pose an unusual threat because IBM isn't exclusively tied to Dell.

The first Dell computers affected will be sold to companies. They will include workstations, networked servers and storage devices used in enterprise data banks, a Dell spokeswoman said. IBM disk drives already are used in Dell laptops and desktops.

IBM wouldn't comment on the deal's impact on its own PC product line. "There is a potential for weakening IBM's PC business if the Dell/IBM marriage works," Kay said. But Dell "has been weak with enterprise customers and internationally" in areas where IBM is strong, he added. ■

# CHOICE, NOT STANDARDS, DRIVES LINUX USERS

*But standards group is working to make versions more compatible*

BY DAVID ROSENTHAL  
SAN JOSE, CALIF.

**T**HE LINUX community should impose only the minimum development standards required to prevent the operating system from fragmenting, said users at the Linux World Conference & Expo here last week.

The Linux culture, and that of many of the 6,000 people who attended the show, values choice above tightly managed standards. But because commercial firms have begun distributing slightly different configurations, called "distributions," not all applications run on all versions of Linux.

"You've got to be able to know that if you get a Linux binary that you can run it no matter what distribution you are running," said Michael Zornka,

a lead programmer at the Cleveland-based manufacturer Eaton Corp., which doesn't use Linux but is evaluating it.

To aid compatibility, the Linux Standards Base (LSB), a vendor consortium in Santa Clara, Calif., plans to produce within a year a specification, a test suite and a sample implementation that vendors can use to make products LSB-compatible.

But Daniel Quinlan, LSB's chairman, said LSB doesn't want to mandate desktop interfaces, Java virtual machines or other supporting technologies.

## User Backing

Users agreed with that philosophy. "They seem to be drawing the line at the correct place," said Drayl Strauss, manager of software development at Digital Domain Inc., a special effects studio in Los Angeles that uses Linux in

high-end image rendering.

Emmett Plant, information systems director at Fun-Time International Inc., a maker of novelty drinking straws in Philadelphia, said he prefers to have a choice among three competing Linux desktop in-

- Incompatible C libraries for applications
- Inconsistent names for important procedures, such as adding a user
- Different methods to register system information
- Different methods of installing packages, or modules, of applications

terfaces and would discourage vendors from standardizing on one.

Vendors last week took different approaches to managing Linux's diversity, including the following:

- Computer Associates International Inc. said its Unica TNG application framework has been tested and ported

only to Red Hat Software Inc.'s version of Linux.

■ VA Research Inc., which sells computers with a choice of four distributions, may have to drop one because testing four is too burdensome, said CEO Larry Augustine.

■ IBM said it will support the four major distributions: Corel Corp. said it will distribute its own Linux version.

■ The GNU Project's Free Software Foundation Inc. in Boston, released a graphical interface for Linux, called Gnome, that will ship with Red Hat's distribution but also runs on other Linux versions. ■

## Cyberattacks on the Rise

*Security group's survey shows increase, which may come from better detection*

BY ANN HARRISON

The Computer Security Institute last week released a study concluding that wider use of security tools has failed to significantly decrease the number of successful cyberattacks or stem resulting financial losses, which rose to more than \$800 million for the third straight year.

The Institute's survey of 521 security managers found that security breaches by outside crackers increased for the third year in a row, with 30% of the respondents reporting intrusions, up from 24% last year.

An Internet connection was a frequent point of attack for 57% of the respondents, and 26% had detected unauthorized access or misuse of their Web sites in the past year. One-third weren't sure if their sites had been hacked or not, according to the survey by the San Francisco-based institute.

## On the Outside Looking In

The number of attacks from outside crackers is catching up to the frequency of unauthorized access from insiders. Insider attacks also rose for the third straight year, with 55% of the respondents reporting incidents, a 10% increase from last year.

Dan Erwin, a specialist in information security strategy and planning at Dow Chemical Co. in Midland, Mich., questioned whether the figures

simply reflect the wider application of intrusion-detection tools and expansion of electronic commerce, intranets and extranets.

Erwin also noted that many companies have opened themselves to attack by installing a firewall without dedicating resources to manage it effectively. Effective security requires an adequate budget, staff training and management support, he emphasized. "A firewall is not a one-time silver bullet. They have to be managed professionally and audited regularly, both internally and externally," Erwin said.

Richard Power, editorial director at CSI, said security management accounts for less than 3% of information technology budgets and that, on average, there is only one security staffer per every 1,000 users. Companies are wasting money buying technology if they don't create the human infrastructure, policies and procedures to curb abuses, Power warned.

Security tools developer Marcus Ranum, known as the "father of the firewall," noted that many companies also don't take the time to install patches for known vulnerabilities.

"The best thing you can do for security is to keep your software up to the [latest] revision level," said Ranum, now CEO of Network Flight Recorder in Woodbine, Md. ■

## SAP AG To Release Linux Version of R/3

*Analysts say 18 months until users ready, but some say big potential exists*

BY CRAIG STEWART

The fast-moving Linux bandwagon picked up a heavy-duty rider last week when SAP AG hopped on board.

SAP, the biggest vendor of enterprise resource planning (ERP) applications, said a Linux version of its R/3 software is due for initial shipment in the third quarter. The German company said it got "a significant number of serious customer requests" for a Linux-based R/3 release.

But analysts predicted it will be at least 18 months before many users are willing to run their corporate ERP systems on the free Unix variant, which now is used mainly as an e-mail, file or Web server.

SAP isn't the only ERP vendor that's embracing Linux,

Oracle Corp., which last week said its applications were being ported to the operating system, demonstrated the software at last week's Linux World Conference & Expo and said shipments should start in the next couple of months.

But PeopleSoft Inc., Buan Co. and J. D. Edwards & Co. said they haven't seen enough user demand to justify doing Linux ports of their ERP applications at this point.

Even so, the idea has some appeal, according to Robert Rubin, CIO at R/3 user Elf Atochem North America Inc. The Philadelphia-based chemical maker has no immediate plans to use Linux, but Rubin said it could be a viable alternative to Windows NT, especially for stand-alone ERP sys-

tems at individual business units.

"There's no question that Linux is for real," he said.

Scott Benninghoff, a systems analyst at Hydro Agri North America Inc. in Tampa, Fla., said he's lobbying to test Linux on PCs or a database application that takes feeds of order data from its R/3 system as a prelude to any ERP usage.

Linux "can definitely handle an ERP application, probably better than NT can," said Matthew Nordan, an analyst at Forrester Research Inc. in Cambridge, Mass.

But corporate Linux know-how often is still limited, and technical support by vendors is just emerging, he said.

Even Kevin McKay, CEO of SAP's U.S.-based subsidiary in Newtown Square, Pa., said it's too early to tell how much demand there will be for R/3 on Linux. ■

Wired Up to the Future

## BRIEFS

Telco Year 2K Group:  
Phones Pass Y2K Test

The Telco Year 2000 Forum last week said phone call processing is expected to continue without major disruption when 2000 arrives. The group of the nation's largest local phone companies finished six months of successful interoperability testing in 20 labs and has posted results at [www.telcoyear2000.org](http://www.telcoyear2000.org).

Pentagon Confirms  
Cyber Attack

The U.S. Defense Department is investigating what it calls an ongoing and sophisticated attack on its military computer systems. A Pentagon spokesman said classified networks have been breached, and investigators are checking whether the attack was a coordinated effort.

Retrain Non-IT Staff  
to Fill Tech Openings

Researchers at International Data Corp. in Framingham, Mass., said 772,000 information technology professionals will need to be hired in the U.S. this year. It recommends that companies retrain non-IT workers to fill the vacancies or recruit non-IT majors out of college.

Feds To Probe  
Online Druggists

A Congressional panel last week ordered a study of online pharmacies. The concern is that Web-based druggists may be filling prescriptions authorized by doctors who had no in-person contact with patients.

## Short Takes

In a case involving encryption software, an Ohio professor and the AMERICAN CIVIL LIBERTIES UNION have appealed a federal court ruling that source code doesn't have the same constitutional protection as speech. . . . SUN MICROSYSTEMS INC. has licensed its Java Media technology to the Linux Foundation June 2 pending tests.

ANTITRUST TRIAL GIVES  
OEMs BREATHING ROOM

**Strong DOJ showing encourages remedy  
pitches, public show of support for Linux**

BY PATRICK THIBODEAU  
WASHINGTON

**T**HE GOVERNMENT'S attack on Microsoft Corp. has emboldened its competitors and business partners to take on the software company in very public ways they might not have dared before.

The Software & Information Industry Association (SIIA), a group that represents both Microsoft's partners and competitors, recently sent the U.S. Department of Justice a report recommending that the company break up into a collection of so-called "Baby Bills."

In addition, some analysts said the slew of recent Linux-related announcements by longtime Microsoft licensees such as Dell Computer Corp. and Compaq Computer Corp. is evidence that vendors are

less afraid of Microsoft.

Still, the companies are stepping gingerly. SIIA members voted for the remedy by secret ballot. And the Linux vendors aren't challenging Microsoft in the area the government claims Microsoft is using its monopoly power: on the desktop.

"Microsoft is not in a position to do many of the things that it might have done in the past," said Dan Kozmetsky, an analyst at International Data Corp. in Framingham, Mass.

For example, the government has alleged that Microsoft used the financial terms in its Windows license agreements to convince vendors not to put rival Netscape Communications Corp.'s Navigator browser on the Windows desktop. Microsoft said that never was the case.

One of the government's strongest pieces of evidence

was presented just before the trial broke on Feb. 26 for a six-week recess. A Gateway official told the court that after the PC maker began offering the Navigator browser, Microsoft representatives "repeatedly" told Gateway its decision was a "serious issue that could affect our working relationship."

## User Demand

Spokesmen at Compaq and Dell said Microsoft's legal problems have nothing to do with their product decisions. "It's just strictly customer demand," said Compaq spokesman Dick Calandrella. User interest in driving vendors, agreed Sandra Potter, an analyst at Aberdeen Group Inc. in Boston. "Linux has a life of its own," she said.

For now, vendors are focusing on workstations and servers but aren't ruling out desktops.

The SIIA's remedy recommendation only matters if the government wins its case. A Microsoft spokesman called the SIIA's recommendation

"wishful thinking." Microsoft executive vice president Bob Herbold claimed the recommendation was made by only a subset of the SIIA's member companies and doesn't reflect the general membership's feelings.

The SIIA's action was criticized by another IT industry group, the Association for Competitive Technology, as "out of touch." It cited its own recent independent poll of 408 IT executives, 62% of whom opposed a break-up of Microsoft. The year-old group, which claims 9,000 members, has been lobbying for Microsoft during the trial.

Kenneth Glick, senior director for governmental affairs at Oracle Corp., an SIIA member, said if the 1,400-member group doesn't weigh in, the fate of the software industry will be left to "the lawyers and regulators at the Justice Department." ■

Online reporter Karlheim Ohlson contributed to this report.

## Gates Pitches NT Support for E-Commerce

**Partners, products target support for high-volume online business**

BY KIM S. HAHN

Microsoft Corp. CEO Bill Gates last week announced a series of e-commerce partnerships with other vendors, a plan to host small-business Web sites and an upgrade to the company's electronic-commerce software.

Analysts said Microsoft had to orchestrate the high-profile San Francisco event to try to ease doubts about whether its products — Windows NT and the upcoming Windows 2000 operating system, in particular — are up to snuff for high-volume online business.

"Microsoft really needs to show they're capable of scaling, for purposes of selling NT," said Scott Smith, an analyst at Current Analysis Inc. in Sterling, Va.

"They've had specialized

**MICROSOFT COMMERCE SERVER**, an upgrade to Microsoft's electronic-commerce Web server due after Windows 2000 sometime next year

**BIZTALK SERVER**, software that supports the Extensible Markup Language and was designed to let Microsoft's Web servers communicate with products from other vendors

**MICROSOFT SMALL BUSINESS COMMERCE SERVICES**, a package of Web development tools and hosting services available via Microsoft's MSN Web site

applications of BackOffice for retail and transportation," for example, but little to appeal to the general electronic-commerce market, Smith said.

Well-publicized setbacks haven't helped Microsoft's cause. One example: Toys R Us Inc. installed Unix Web servers when its existing Windows NT servers got over-

whelmed by a Christmashime rush at the retailer's Web site.

But Microsoft points to some large customers that vouch for Windows NT's strength. Office Depot Inc. in Delray Beach, Fla., has standardized on Microsoft products and "couldn't be happier," said CIO Bill Seltzer in a recent interview.

Office Depot runs NT at its online store and plans to install the operating system at its 750 physical stores.

Gates talked about a couple of new products, including BizTalk, a set of interchange services and data templates based on the Extensible Markup Language and designed to let merchants and customers exchange business data. SAP AG, PeopleSoft Inc. and J.D. Edwards & Co. said they will support BizTalk, which is slated for beta testing in July. Commercial release isn't expected until next year.

Also due next year is an upgrade to Microsoft's Site Server Commerce Edition, a Web server for online commerce (see chart). The upgrade, Microsoft Commerce Server, isn't due until several months after Windows 2000 ships — and that's not expected until late this year or early next. ■

West Coast bureau chief Galem Gruman contributed to this report from San Francisco.

Only **8%** of internet businesses **ARE PREPARED**  
for a computer system disaster.\*

*[ Here's how to avoid becoming a statistic. ]*

Computer system disasters cost companies millions. Indeed, it can lead to the company's destruction. What, you may ask, can assure your company's survival? Only an airtight, proven data backup plan. An essential ingredient of which is DLTape technology, the industry standard in reliable tape backup systems. And DLTape system vendors, working in conjunction with a number of disaster recovery experts, can provide you with the information, tools and expertise you need to survive a catastrophe. To find out how secure your company is, contact us at [www.DLTape.com/ProveIt](http://www.DLTape.com/ProveIt) or 1-888-DLTape.

## HP Breakup

its energies and resources better on its core computing business, said Scott Manning, manager of midrange systems at Sales Fifth Avenue in Lawrenceville, N.J.

"They need to have a strategy that says, 'This is what we can help you build, and these are the resources we can bring to bear to help you do us,'" said David Krauthamer, IT director at Advanced Fibre Communications Inc., an HP user and a manufacturer of telecommunications equipment in Petaluma, Calif.

As laid out by HP Chairman and CEO Lewis E. Platt, HP will be split into two pieces: a \$76 billion measurement company — to be spun off as an independently traded company later this year — and a separate, \$30.5 billion computing and imaging organization that will retain the HP name. It will focus on all of HP's enterprise computing hardware, software, middleware, PCs, printing and imaging technologies.

The breakup, which should be completed in about 18 months, was driven by growing differences in the business models of the measurement organization and the computer business, Platt said.

No layoffs are planned. Platt plans to leave after the transition is completed.

The restructuring of HP — one of the biggest of its kind in

IT history — comes at a time when the company has been struggling to regain its momentum of the early 1990s. Though HP remains profitable, much of its previously galloping growth rate, which was in excess of 20% as recently as 1996, has slowed.

Product revenue has been sluggish, and the company has fought to cut mushrooming operating expenses with a series of cost-cutting moves last year. HP also has blamed the Asian financial crisis, currency fluctuations and PC price wars for its tepid performance in the past few quarters.

Accustomed to a high-margin proprietary server business, HP also has had a hard time bringing operating costs in line with a commodity hardware business.

### Mixed Messages

Users meanwhile, have groused that the company sends conflicting messages about its strategic direction — most notably in the Internet arena.

During the past year or so, HP has taken significant steps to address these issues.

A couple of major internal reorganizations last year — under which HP merged its vast IT consulting and enterprise computing organizations and aligned its Unix and Windows NT sales forces — have shown users that different groups "are on the same side," said Vance McCarthy, editor of HP World, a user publication owned by the HP user group Interex. ■

## Component change in router interface cards puts data on Token Ring packets at risk

BY BOB WALLACE

**C**ISCO SYSTEMS INC. last week confirmed that it's recalling interface boards for its popular high-end routers because of a problem that can corrupt mission-critical data in Token Ring packets.

The networking giant estimated that roughly 1,600 boards for its 7000 and 7500 high-end routers underwent a component change that leads to the data corruption. Cisco is providing replacement units free of charge.

Eric Teagarden, Cisco's Token Ring switching product manager, said the problem was brought to the vendor's atten-

tion recently by a user whom Cisco refused to identify. He said he doesn't know how many users have the affected boards.

Although an unspecified number of users with the boards likely run transport protocols such as TCP that can correct the problem, Teagarden said Cisco decided not to rely on that, opting instead to replace all the boards. The vendor last week posted a recall notice on its Web site.

### Serious Problem

And analysts said the problem could be serious. "This problem is severe enough for users to do the board replacement, as Token Ring networks

are used for more mission-critical mainframe applications than Ethernet," said Eric Hindin, an analyst at The Yankee Group Inc. in Boston. "In a stock transaction it could mean a decimal point is moved."

Pinpointing the problem could be a tall task for users, said Stan Schart, a director at Giga Information Group Inc.'s San Diego office. "When corrupted data is sent over a WAN, it's not going to be self-apparent that the cause is a router problem," Schart said. IT staff will think the problem is with a WAN line rather than the router, he said.

Cisco's efforts to track down users of the affected boards is complicated by the fact that the vendor sells much of these products through channels, which can prompt identifying the bad units. ■

Continued from page 1

## Health Y2K

The recommendations are expected to be adopted by much of the health care industry. Backed by heavyweights that include Actina Inc., SmithKline Beecham and HighMark Blue Cross/Blue Shield, the plan was developed under the auspices of Odlin Group LLC, a Nashville research firm.

"The health care system is fully interdependent, and we either all win or we all lose," said Daniel Nutkis, chairman of Odlin Group.

The group will publish guidelines for alternate operating procedures that cover things like how hospitals can order medications if their computerized supply systems aren't working or how they could be paid if insurers can't cut computerized checks.

The guidelines also include the following:

- Tips for establishing alternate operating procedures with trading partners.
- An assessment of the top 150 functions that are related to

year 2000 compliance and patient safety.

■ Case studies and examples detailing recommended approaches if systems fail.

"We are assuming that a certain amount of failure will occur, and [we] are trying to get the health care industry to think about contingency plans," said Brad Armstrong, a partner at Deloitte Consulting's health care information technology practice and initiative member.

Fairview Health System, which operates 700 beds at two Cleveland-area hospitals, plans to wrap up the remediation of its biomedical devices and computer systems by June so that it can test its contingency plan. That includes having generators and a backup water supply on hand, said Chris Clancy, director of technical services.

Clancy said he's interested in the Odlin Group work "even just to use as a comparison to what we're coming up with." He added that it could be key to smaller hospitals. "We were called by some small hospitals last year who were looking for the names of some Y2K consultants. . . . We were pretty

shocked that they were just getting around to thinking about it," he said.

Indeed, the health care industry has come under fire recently in congressional reports that single it out as the worst-prepared for the year 2000. According to the Senate's Special Committee on the Year 2000 Technology Problem, 6,000 hospitals, 400,000 doctors and 50,000 nursing homes may be unprepared for the year 2000.

"Now, the industry is starting to look at contingency plans," said Maureen Mudron, counsel for the American Hospital Association (AHA) in Washington. AHA already has distributed some of the Odlin Group's year 2000 research to its 5,000 members.

Dick Hutcell, information officer at Catholic Healthcare West in Los Altos Hills, Calif., a network of 48 hospitals, said, "I think a lot of hospitals are just starting to think about contingency plans. So anything that might help them is good." ■

## Retailer Orders Outsourcing

BY SHARON MACHLIS

Montgomery Ward & Co. has signed a five-year contract to outsource its information technology operation in order to cut costs and, it said, to offer more career opportunities to its IT employees.

The Chicago-based retailer is in the midst of a Chapter 11 bankruptcy reorganization.

Outsourcer Acwcom Corp. in Conway, Ark., said it will move Ward's data center from the retailer's Chicago headquarters to an Acwcom site in Downers Grove, Ill.

The deal covers mainframe, midrange, desktop and network operations.

Action, which estimated the contract will be worth \$90 million, will offer jobs to more than 100 Ward IT employees.

In a statement issued last week, Ward CIO Karl Taylor said the company chose the outsourcing arrangement because of cost efficiencies, ability to deploy new technologies and long-term career opportunities for IT workers.

It's fairly common for companies in financial difficulty to look to outsource IT in cut costs and make it easier to hire and retain IT talent, said Brian Hume, president of Martec International Inc., an Atlanta-based retail consulting firm. ■

# New! APC Symmetra™ Power Array™ provides 7 x 24 protection for recentralized datacenters

You've survived downsizing and rightsizing. You've seen the main-frame come and go a few times. Users who once demanded the power of distributed client/server are now asking you to take back what you gave them and make it available 99.999% of the time.

APC's Award-winning Symmetra™ Power Array™ can help. Designed to handle complex computing environments, the Symmetra protects 7 x 24 datacenters and enterprise server farms like no other machine. With Symmetra's advanced Power Array technology, you cease to worry about power problems and you focus on keeping your end users happy.

We protect more networks and systems than any other brand. Call APC today for your FREE Enterprise Solutions Kit.

For site-wide protection, ask about the new APC Silicon DP300E with solutions starting at 10 kVA.

"APC has innovative technology which promises reliability. Symmetra™ interacts smoothly with both hardware and software."

Ken O'Brien, Field Support  
Formerly Manager/IS,  
Toyota Motor Sales, USA

#### Reliability factors

- Downtime risk is reduced through N+1 redundancy
- 4-16 kVA scalability allows modular expansion and reconfiguration as your datacenter grows
- APC is preferred 8-1 for reliability over any other brand (Computerworld magazine study)
- Extended battery frames mean virtually unlimited runtime
- Easy manageability through PowerChute™ plus software improves your crisis response time
- Simple maintenance dramatically lowers cost of ownership

Installing or reconfiguring your modular Power Array couldn't be any simpler.

If you only know Compaq for PCs and servers, do you really know Compaq?

*The world's 10  
largest telecom and  
computer enterprise  
systems  
and the next 10  
And the  
10 after that*

All over the world, the IT bedrock that companies build on comes from Compaq. We've created enterprise systems for 18 of the top 20 U.S. banks. Over 100 stock exchanges worldwide.

Sixty percent of the planet's power generation/distribution systems.

Ninety percent of the world's microprocessor production.

And this isn't just hardware. Compaq delivers complete enterprise solutions. The mission-critical systems that keep business in business.

**Who out-integrates the top integrators? Including IBM?**

It may surprise you. It's Compaq. In fact, Compaq beat out the biggest names in IT integration in *InformationWeek's* annual poll of IT professionals, finishing second by the slimmest of margins. If you need to get the most out of your IT investment, we don't just have the answer. We are the answer.

*Where in the world  
do you do business?  
No matter  
over 27,000 service  
professionals call  
114 countries home.*

Whose systems run 17 of the 20 largest stock exchanges, worldwide?

It's the same folks who enable over 60% of the world's interbank transactions. Compaq. With systems and support services that allow hundreds of millions of dollars to flow safely all over the world, every second of every day. It's the ultimate in mission-critical, fault-tolerant NonStop® computing.

The kind we provide, not just for the financial world, but for all kinds of industries.

**Who knows SAP R/3 like no one else (except, of course, SAP)?**

We have over 5,000 R/3 installations under our belts—more than any other competitor. To put R/3's enormous power to work in your business,

why not go with some of the people who know it best?

**Who outruns everyone under the sun (including Sun)?**

Compaq's lead in high-performance 64-bit UNIX® computing is huge, and growing. For example, we set an all-time TPC-C® record running Oracle8™ on clustered AlphaServer® systems. What does this mean in real life, you ask? It means that we can help you do things in a few seconds that used to take you days.

**Who helps millions of e-mail users explain, expound, collaborate and just plain talk?**

Compaq systems and support people help run many of the world's largest e-mail systems.

# Compaq?

We're also the number one integrator of Microsoft Exchange®, with over 400 global customers. If you've got a large project ahead, remember: We can be a big help.

**Where does the enterprise store its gigabytes, terabytes and googolbytes?**

Once again, we're the answer. Compaq StorageWorks® delivers the widest array of multi-user storage products in the business. And they're designed to solve storage problems for any enterprise, no matter which hardware and software you already use: ours, theirs, anyone's.

# AltaVista™

AltaVista—created by Compaq, running on Compaq AlphaServer systems—handles 1 billion Internet searches per month.

*All of the world's top 10 aerospace companies fly a 486 Compaq. (There's no better launch platform for technical computing than Compaq 64-bit UNIX.)*

When telephone companies all over the world dial 911, who picks up?

Did you know that all of the top 30 telcos depend on Compaq for everything from fault-tolerant NonStop computing to comprehensive disaster relief? So do more than 170 other telecommunications companies. If your company could use that kind of reliable, bulletproof computing, why not give us a call?

# Who knew?

Ever buy stock online?  
Or bank in your pajamas?

Three quarters of the top ISPs choose Compaq to keep millions of subscribers connected. Four out of the five most popular Web sites are powered by Compaq. Microsoft chose us to implement and manage the infrastructure for MSN.com.\*

And AltaVista\*, the most powerful and useful guide to the Internet? We don't just run it. We invented it.

*Even a virtual storefront needs a rock-solid foundation. So thousands of e-businesses, large and small, top Compaq for systems, solutions, support.*

In other words, as enterprise computing moves onto the Internet, it's also moving onto Compaq.

# INDUSTRY PLAYERS SET PLANS FOR WEB DEVICES

Standards may be years away, but U.K. retailer sees promise now

BY STACY COLLETT

**T**HE BUSINESS alliances announced last week are laying the groundwork for Web-based standards in interconnected cell phones, personal digital assistants and even home appliances.

Some 15 high-tech companies, including IBM, Sun Microsystems Inc. and Oracle Corp., plan to create Java-based programming standards for Internet service providers, network operators and equipment manufacturers.

And in a separate announcement, Motorola Inc., Lucent Technologies Inc. and AT&T Corp. said they formed the Voice Extensible Markup Language (VXML) Forum, which will promote VXML standards for creating Web content and services to be accessed by phone.

"Standardization is about five to 10 years out," said Greg Blatnick, an analyst at Zona Research Inc. in Redwood City, Calif.

But some corporate infor-

## Standardization is about five to 10 years out.

GREG BLATNICK, ANALYST,  
ZONA RESEARCH INC.

mation technology departments are already exploring the use of non-PC devices and the technological challenges that go with them.

Safeway Stores PLC, a U.K.-based grocery chain, developed with IBM a remote shopping service that lets customers use palm-size electronic organizers to build and submit grocery orders.

### grocery list

A scanner in the devices, developed by 3Com Corp., lets customers scan products at home to compile a list. A modern transmits the order

through Safeway's intranet to a server, where IT staff use browser-based applications to identify and retrieve a customer's groceries.

Customers can pick up their order within eight hours of transmitting at one of 160 stores.

"We have no plans on expanding our IT staff, but as we

move the project forward we will expand our skills in Java and Web-based technologies," said Jeremy Wyman, business solutions manager at Safeway in Middlesbrough, England.

Safeway distributed 200 handheld devices in February. Its 500 U.K. stores could deploy a half-million devices in the next four years, according to Wyman. He added that Safeway's future customer service projects involving mobile phones and set-top boxes that

will use the Web.

IBM officials said the company is working with unidentified pharmaceutical companies to test thin-client devices for placing drug orders and with companies in the automobile industry to test car-mounted devices that provide logistics and fleet-management information.

As thin-client technology advances, industry observers said users will face challenges such as securing valuable data on small devices that are easily lost or stolen, managing applications on a large scale and transcoding information to ensure that different devices can communicate with one another. ■

## Ben & Jerry's: Serve Yourself on Site

With no time for personal replies to fans, ice cream maker uses Web to dish scoop

BY BARR COLE-RODOLSKI

In the early days of its business, the founders of Ben & Jerry's Homemade Inc. would scratch handwritten notes in response to consumers' letters. Now, when it comes to e-mail answers, the company known for its homemade ice cream flavors is asking customers to serve themselves.

Since it launched its Web site ([www.benjerry.com](http://www.benjerry.com)) in 1995, the South Burlington, Vt., ice cream maker has seen its e-mail volume climb to as many as 500 messages per week.

Using Bozeman, Mont.-based Right Now Technologies Inc.'s Right Now Web, Ben & Jerry's built a searchable database of frequently asked questions in which ice cream fans can find the status of their favorite flavors and locate stores. If they still want to send e-mail, the system, installed Feb. 15, will channel the message to a specific person.

### Culture Clash?

The decision to install the software was a tough one for the culture-conscious company.

"We feared that it would feel overautomated," said Lucas Jensen, marketing strategy and research manager at Ben & Jerry's. However, "we feel we can

maintain the personal feeling by allowing consumers to read other peoples' questions," he said.

David Baltuse, an analyst at Current Analysis Inc., a research firm in Sterling, Va., applauded the move.

"Customers want to know the answer to their questions, and they want a positive experience in dealing with the company," Baltuse said. "But they don't have to interact directly with somebody," a move that can save a company time and money, he said.

Jensen said the system should help Ben & Jerry's avoid having to grow its three-person customer affairs group.

It isn't likely to eliminate the queries completely, however. "No matter how easy you make it for people to find answers, some don't make the effort to find the information themselves," he said.

To handle fan mail and flavor suggestions, the company is constructing new areas of its site where fans can leave notes. And it's readying Chunkmail, an e-mail service that will keep customers who sign up informed about new flavors and special deals.

"It's not like we are trying to eliminate contact with our customers," Jensen said. They're just trying to make that contact more productive, he said. ■

# Here's Your 2 Fame And

## Computer Associates Software Achievement Awards

If you missed out on last year's action, here's your chance to grab some limelight—all just for doing something you love: developing software! Due to the overwhelming response of last year's contest, CA's Software Achievement Awards are back and better than ever. Now open to applications developed with Unicenter TNG® or Jasmine®, the Software Achievement Awards represent a unique opportunity to recognize the best and the brightest our industry has to offer.

### Big Prizes.

Here's a rare chance to show off your skills as you gain world-wide recognition as one of the best developers around. And, as if that's not enough, each winner also receives \$100,000\* of CA software! What's more, a single Grand Prize Winner\*\* will receive a \$100,000 check made out to their favorite charity.

### It's Quick And Easy To Develop Your Winning Solutions.

Whether it's a state-of-the-art Web application built with Jasmine, or a business-critical Unicenter TNG intelligent agent, CA has all the tools you need to build your winning solution.

The Unicenter TNG® Framework™ and Jasmine Developer Edition can save you years of development time. They provide an instant foundation for virtually any kind of application you need, complete with common services and multimedia support.

# nd Chance For Fortune.

## Who Can Enter?

Whether you are an employee of an ISV, a CA Business Partner®, a CA client, or a consultant working from your home—no matter who you are (except CA employees and their families of course), you're welcome to enter.

**A Million Dollars In Prizes!**

## No Purchase Required!

All contest entrants are eligible to receive these FREE CDs: Unicenter TNG Framework, Unicenter TNG Software Development Kit (SDK), and Jasmine Developer Edition. Use any or all of them to develop what may be the winning entry!

## Software Achievement Awards

1. Most Humanitarian Jasmine Application
2. Most Creative Jasmine Application
3. Greatest Jasmine Business Benefit
4. Best Unicenter TNG Neugents™ Technical
5. Best Unicenter TNG IT Intelligent Agent
6. Best Unicenter TNG Internet Technology
7. Best Unicenter TNG Non-IT Device
8. Best Unicenter TNG Application Agent
9. Most Creative Unicenter TNG Application
10. Greatest Unicenter TNG Business Benefit

Grand Prize Winner

## Enter As Often As You Like In One Or All Ten Categories.

Are you a security expert? An Internet addict?

A specialist in intelligent agents? Or perhaps you have a new idea that's totally outside of what you do 9–5. Maybe it's something you've always wanted to write. Something very different than your traditional IT applications. Or even something that makes the world a little bit better place. No matter what kind of application or agent you want to create, this contest gives you a chance to do what you do best—with an opportunity for recognition and reward!

## So What Are You Waiting For?

The opportunity of a lifetime awaits you. A distinguished group of industry experts will judge all entries and choose the winners. Individual category winners will be announced July 1, 1999. The Grand Prize Winner will be announced at CA-World 1999, July 18–23 in New Orleans. Don't delay—the contest deadline is April 30, 1999.

# WEB MERCHANTS STUNG BY FRAUD

Authorities rarely interested in catching credit-card crooks

**T**his new subscribers' credit cards were fake, which puzzled webmaster Danny Sullivan. His Searchengine watch.com, an online zine near Britain's Stonehenge, was hardly a ripe target for thieves.

So Sullivan traced the transactions to their source, uncovering a scam that bilked companies such as Amazon.com Inc. and Cyberian Outpost Inc. out of hundreds of thousands of dollars in computers, software, books, music and other merchandise.

Along the way, Sullivan also uncovered one of the Internet's dirtiest secrets: Credit-card fraud is alive and well on the Web — but its victims are mostly electronic-commerce merchants, not consumers. Criminals use stolen credit-card numbers to ring up online purchases — usually of high-ticket electronic items or downloadable products such as software and images — and stick online merchants with the tab.

In some cases, fraudulent transactions accounted for

20% or more of Web merchants' sales until managers got wise and installed anti-fraud software. "There were days when we had more fraud than legitimate sales," one chief technology officer said.

Worse, law enforcement officials, banks and credit-card associations often are too busy, too untrained or too indifferent to help catch the crooks.

Sullivan found that the thieves — who turned out to be five university students — used the site to test credit-card numbers and then used successful numbers to scam U.S. merchants. Finding the thieves was easy compared with finding someone who could stop them. "I finally called the '800 numbers on back of my credit cards, saying, 'Please help, someone is being ripped off,'" he said. A few weeks later, authorities finally responded and arrested the thieves.

## Police Apathy

Similarly, the team who covered for NETRapeous Inc.'s Stephanie Sebeck during her vacation failed to notice that orders for the company's Internet marketing materials on

three different credit cards were going in the same address. When angry cardholders denied the charges, Sebeck called the police. "We found the thief, told them where he lived, what he took, sent the paperwork. [The police] said, 'We have more important things to do than chase down \$1,500,'" said Sebeck, vice president of operations at the Olney, Md., firm.

The experience prompted NETRapeous owners Audri and Jim Lanford to start Scambusters (www.scambusters.org), a fraud-alert Web site for online retailers. More than 50,000 merchants have subscribed to the free site. Judging from their tales, online credit-card fraud is rising fast, Audri Lanford said.

Banks that issue the credit cards don't cover the cost of the scams. "We don't take any loss via the Internet because we can charge it all back [to the merchant] using Visa and MasterCard rules. The merchant, not us, bears the cost," said Rob Milson, manager of fraud operations at Mellon Bank in Pittsburgh.

Like their counterparts in the mail- and telephone-order businesses, Internet credit-card transactions lack a signature or the identification-carrying magnetic stripe on the back of the card. Merchants who accept them agree to pay full cost — and often penalty fees — if a sale is invalid.

"Banks aren't going to protect merchants. We certainly understand that their first duty is to cardholders. If we don't want people stealing from us, that's our problem," said Jim Shanks, CIO at computer equipment retailer CDW Inc. in Vernon Hills, Ill.

An online merchant who asked not to be named said one bank had dropped him for having unacceptably high fraud rates, forcing him to turn to a far more expensive, "high-risk" bank to continue accepting customer cards. "We got our fraud down now, but if it ever exceeds 1% of our total, we're out. That, of course, means instant bankruptcy," he said.

Fraud nearly vanquished San Francisco-based BuyDirect Inc. when it opened for business in 1996, said William Headpohl, president of the online software store. "Our fraud rate was unacceptably high and banks wanted to drop us. If we hadn't had strong fi-

nanancial backing and worked hard to reduce our fraud rates, we would have been put out of business pretty quickly."

Using anti-fraud software and elaborate screening systems, the company reduced its fraud rate to under 1%.

Credit-card associations and many merchants said online fraud constitutes under 1% of all transactions. But anecdotal evidence suggests the rate may be far higher — especially for sites that are poorly maintained or sell big-ticket merchandise. Merchants simply don't see the benefit of reporting thefts. "Most [online merchants] no longer even bother to get in touch with the authorities," Headpohl explained. "It would cost too much to track thieves down and prosecute. And if they're international, you don't even know where to begin. Who's got jurisdiction?"

Selling internationally is one of the key reasons for starting an electronic-commerce site, yet foreign sales are the riskiest of all. "Our international fraud rates were so bad in the beginning, we thought we were going to have to exclude overseas sales altogether," Headpohl said. "Companies like ours were routinely seeing fraud rates in excess of 20%."

The greatest concentrations of credit-card thieves come from Romania, Egypt, Russia, Belarus, Israel, Thailand, Pakistan and Mexico, merchants and law enforcement officials said. The problem is so bad, in fact, that many merchants refuse to do business with buyers in these countries.

Usually, the amounts lost in online transactions are too small to warrant attention by law enforcement officials. "Everyone we've talked with had absolutely no success getting police interested, even for amounts as high as \$50,000," said Scambusters' Audri Lanford.

Instead, most successful Web merchants avoid fraud by outsourcing credit-card verification to third parties with sophisticated (and expensive) neural-net anti-fraud software. Or they develop their own anti-fraud systems. Another approach is to take verification procedures off-line and check cards manually.

A combination of these procedures, analysts said, provides the best of both worlds: expert authorization handling and expert knowledge of the company's customer base.

"You shouldn't have to rely on banks or the law for fraud protection," Shanks said. "You should know your own customers better than anyone else, so you should also be the best at telling when someone's trying to steal from you."

"Fraud can make the difference between profit or no profit," Shanks added. "Look, if it's your pile of money, who do you want guarding it? Somebody else?"

## Seedy Sites Provide Fertile Ground

Many credit-card thieves hone their skills in the most fraud-filled sites of all: adult entertainment and offshore gaming.

"We have a rule that we will not take on adult Web sites, dating services and gaming sites because they are rife with fraud," said John Gould, vice president of transaction processor Internet Commerce Services Corp. in Nashua, N.H. "We don't need the headaches, frankly."

Minnesota physician John Faughnan stumbled on to just such a headache when he learned that mysterious small charges on his business credit card were for an adult Web-site subscription.

With the help of a Seattle-based adult site portal owner,

Jane Davell, Faughnan traced the charges back to Kenneth H. Taves. Taves ran high-risk credit-card processing services for adult sites, allegedly steering card numbers from customers and buying off online.

Prosecutors are presenting evidence that Taves, who is currently on trial, may have netted as much as \$40 million.

Adult site owners say they aren't surprised; massive fraud is common in their business.

"There are no consumer-protection groups for pornography customers. What state's attorney general is going to take on protecting the people who sell pornography online?" David said.

— Cynthia Morgan

## IBM Pushes E-Commerce Plans to Partners

BY JAINUMAR VUJANIK  
NEW ORLEANS

IBM built its reputation mainly on its big iron and other hard-

ware. Increasingly, however, the company is hoping to be recognized for its electronic-commerce technologies and

services. Seeking to hammer home that message at a recent conference attended by more than 4,000 business partners,

IBM outlined a wide-ranging series of new programs for software vendors, systems integrators and resellers to help users quickly deploy Web applications.

"IBM really is the only ven-

dor who has been very aggressive in telling customers that e-business is a major thrust for them and that they want to be your major partner," said Jerry Rode, director of information systems at Saab Cars USA Inc. in Norcross, Ga.

IBM's strategy is to deliver a range of electronic-commerce software, middleware and service bundles that small and midsize businesses in particular can quickly sew into their existing environments.

For instance, the company has announced a multiplatform version of its Start Now technologies that will allow Windows NT, AIX and Solaris users to set up online storefronts.

IBM will rely on resellers, systems integrators and software developers to help customers with the necessary backward integration, customization and support of such electronic-business suites in the small and midsize business markets, said William Zeiler, general manager of sales and marketing for IBM's corporate software group (see story, page 65).

### Leaving Its Mark

The latest moves should boost IBM's mind share among its electronic-commerce customer base, Rode said. Saab last year built a Web-based business-to-business network using IBM technology to link dealers nationwide back to its headquarters in Georgia. The company is considering IBM offerings for its online shopping and commerce site planned for later this year, Rode said.

"A lot of other companies have been talking the talk, but IBM is one of the few vendors who have really been walking the walk," said Laurie McCabe, an analyst at Summit Strategies Inc. in Boston.

IBM corporate Web technologies like Start Now, Net.Commerce for online catalog sales and WebSphere application servers build on its vast array of operating systems, hardware, management, messaging and middleware technologies, McCabe said.

Together, "It has given them a lot of cross-platform capabilities and has positioned IBM very well" for users looking to extend existing IT infrastructures to the Internet, she said. ■

INVEST IN WHAT YOU KNOW

**Business-to-business  
e-commerce revenues are  
projected to reach \$326 billion in  
2002, up from \$8 billion in 1997 –  
an increase of over 3900%.**

## BRIEFS

## Baan Suffers Loss

Baan Co. last week reported a \$295 million loss for last year's fourth quarter - \$45 million deeper in the red than the struggling Dutch company predicted two months ago (CW, Jan. 25). The company said it set aside more reserves for restructuring charges than planned because of the weakening demand for enterprise resource planning applications that rival vendors also have seen this year.

SAP America Loses  
CEO to Siebel Systems

Jeremy Costa last week resigned as president of SAP AG's U.S. subsidiary in Newton Square, Pa. Costa was in charge of SAP's six vertical industry sales groups in the U.S. and Canada, which now will report directly to SAP America Inc. CEO Kevin McElroy. Three other executives have left the company during the past year.

Costa plans to join sales force automation vendor Siebel Systems Inc. in San Mateo, Calif., as vice president of North American operations, according to SAP officials.

PeopleSoft Gets  
New Sales Manager

PeopleSoft Inc., an application rival to SAP AG and Baan Co., is changing its sales management in the wake of a weak fourth-quarter showing. The Pleasanton, Calif., company said Al Duffield - the brother of CEO Dave Duffield - will give up his job as senior vice president of field operations and retire from the company later this year. Taking over the top sales spot will be Howard Orlin, who has been head of international sales.

## Short Takes

Internet consultant ANSWERTHINK CONSULTING GROUP INC. in Miami has acquired TRISPAR INC., a Philadelphia company that offers electronic-commerce development products. . . . QUANTUM CORP., a drive maker in Milpitas, Calif., plans to develop hybrid tape and disk systems and network storage devices to help offset lower profits in its traditional drive products.

SUN WARMS UP TO  
WEB-BASED SOFTWARE

*'Com.' offering to provide companies  
with ability to build business portals*

BY CAROL BLUM

WITH ITS "com" announcement this week, Sun Microsystems Inc. will make a concerted push to get the world to take it seriously as a major player in the Internet-centric software space.

But the Palo Alto, Calif., vendor's latest attempt to shift its image from a hardware-driven company to software maker will be an uphill climb, analysts said.

"Just because you throw up a marketing blitz doesn't make you a software company," said Craig Roth, an analyst at Stamford, Conn.-based Meta Group Inc. "It'll take a sustained presence in this market before companies start thinking of Sun as a software company."

It also will take a change in corporate behavior, said Phil Costa, an analyst at Giga Information Group Inc. in Cambridge, Mass. So far, "they're talking about the right things," Costa said, noting that Sun is changing its sales approach and software support structure

and training its employees to deal with both hardware and software offerings.

In its latest marketing push, Sun claims it has all the ingredients to enable a company to build business portals to help it connect with customers, partners, suppliers and employees.

## Strategic Server

A central piece of that strategy is Version 5.0 of the NetDynamics application server that Sun will launch this week. The software - which sits in the middle layer of a multitier application - can help companies build applications that help Web clients access back-end databases and services.

To give customers more op-

tions, the NetDynamics application server supports rival Microsoft Corp.'s Component Object Model in addition to the Java-centric, multipatform Common Object Request Broker Architecture that Sun promotes.

Support for Windows will have to continue if Sun wants to be successful on the software side, said Dave Kelly, an analyst at Harwitz Group Inc. in Framingham, Mass. "There has to be some level of independence in the software division," he said.

Sun acquired NetDynamics Inc. last summer to fill an important gap in its product offerings. A deal that has yet to be finalized with America Online Inc. and Netscape Communications Corp. should take care of another gap - giving Sun access to Netscape's electronic-commerce products and browser and a key vehicle

to deliver its Java programming language.

"Ultimately, Sun doesn't have a position in the Internet [market], and it would strike me as likely that for the [money] they contributed to the AOL-Netscape deal, they will end up with some kind of play on the Internet," said Tim Slone, an analyst at Boston-based Partners Seydell Group. "But exactly when, how, where, when is all up in the air still."

Kelly said Sun has to overcome the following obstacles:

- Integrating the software it acquires through the pending AOL-Netscape deal.

- Acquiring additional technologies (such as messaging).
- Continuing to build a developer base.

"That's a big challenge," he said.

Two of Sun's major rivals - Microsoft and IBM - have a similar breadth of "com" offerings to help their customers launch the sort of business portals that help companies exchange information and engage in electronic commerce. ■

## Y2K Firm Sees Future in Enterprise Portals

*Larger portal projects pose biggest threat*

BY MARCY DILLON

If Jan. 1, 2000 comes and goes without a hitch, year 2000 computer services firms will have served their customers well. Unfortunately, they will have helped put themselves out of business in the process.

But Alydax Software Corp. has a contingency plan. Last month, the year 2000 software firm in Charlotte, N.C., changed its name to Information Architects Corp. and began to reposition itself as a consulting and services provider in the growing market for "enterprise information portals."

"They have good clients and a good [year 2000] business - but looking down the road, they weren't seeing much upside for their price-to-earnings ratio," said Otto Grote, an analyst at Derby Securities Inc. in New York.

Apparently, investors didn't see much upside, either. Alydax's stock sailed as high as \$19 in March of last year, but by

October it was as low as \$5.25.

"It's the perception on the street that Y2K is driving this change," said Information Architects CEO Robert Grader. "But the [enterprise portals] market has a lot to do with legacy integration. So it's not a big stretch for our staff. It's a natural evolution."

An enterprise information portal works by taking internal company information - such as data in legacy systems, enterprise resource planning systems and client/server applications - and making it accessible via an intranet application via a Web browser. One analyst said using a corporate portal is like putting all of a company's data into a searchable Yahoo!-like taxonomy.

The total enterprise portal market was about \$4.4 billion last year, said Julie Tymian, an analyst at Merrill Lynch & Co. in San Francisco. Tymian said those revenues could reach almost \$15 billion by 2002.

She said little-known com-

panies such as Information Architects "will probably face huge challenges" as they attempt to take on large portal projects, although the market is still wide open.

"To general, though, we think the big players like IBM and Oracle [Corp.] will be able to bring all the [portal] elements together a lot faster than companies without such deep pockets," Tymian said.

## A Possible Player

Grote said he's impressed with Information Architects' progress so far. "We didn't believe the CEO when he said he was going to make the change. But he's doing it. It will be an uphill battle, but it looks to me like he's made some good acquisitions."

Last month alone, the company acquired Data Systems Network Corp., a network integrator in Farmington Hills, Mich.; Tumble Interactive Media Inc., a Web-design firm in New York; and New York-based Internet service provider Web Communications. ■

**Performance.** A range of screaming-fast Intel® Pentium® II processors up to 366MHz. Spacious hard drives up to 6.4 billion bytes. No matter which Satellite® 4000 series model you choose, you can count on plenty of horsepower and capacity at a very competitive price.

**Brilliance.** Stunningly vivid TFT active-matrix displays rival the viewable area of desktop screens. 3-D sound systems with Stereo Bass Reflex speakers ensure dramatic audio. Features like these enhance your most demanding multimedia applications with extraordinary dynamic impact.

When you have to trim the budget,  
but you can't afford to cut performance.

**Connectivity.** 56K V.90 modems accelerate Internet and remote access to the new standard in high-speed communications. The Satellite 4000 series connects easily to desktop accessories and networks through convenient built-in ports or optional docking accessories.

**Design.** The slim, convenient all-in-one design, including built-in 24X max. speed CD-ROM, floppy and hard disk drives, gives you the tools you need without any add-ons or plug-ins. So you get top performance at an affordable price from the world leader in portable computing. Call 1-800-TOSHIBA or visit [www.toshiba.com](http://www.toshiba.com).

PAUL GILLIN

# The pain of success

**C**HARLES SCHWAB'S stock trading servers shut down last week for the fourth time in the last two months. ETrade crashed three times in February alone. Ameritrade also suffered a recent outage. Is this any way to run a business? You bet it is. In fact, you should be so lucky as to have such problems. What online brokerages are experiencing are the growing pains of phenomenal success. ETrade's goal is to add 1 million customer accounts this year. Schwab already is processing 60% of its volume online. Call this a paradigm shift, a structural change, a realignment or whatever. An age-old industry is being reinvented under our noses and those companies are leading the way.

Silicon Valley guru Geoffrey Moore has said he knows a technology company is going to be successful when he starts to hear stories about its customer service problems. That means the company can't keep pace with demand from people who want to use its products. Remember America Online's horrific busy signal problems two years ago? Have you looked at AOL's stock price lately?

The popularity of a new technology always brings with it a revenge effect of disruption and frustration. The risk of an auto accident doesn't stop most of us from driving. Fre-

PAUL GILLIN is editor in chief of Computerworld. You can contact him at paul.gillin@computerworld.com.

quent outages in early telephone systems and electrical power grids didn't stop those technologies from spreading. We even put up with Microsoft Windows.

The stock trading failures of the past few weeks won't prevent a certain amount of caterwauling from people who complain that those systems are inherently unreliable. They're right. And you know what? It doesn't matter.

If you're running IT for electronic commerce, get used to

uncertainty. IT people are generally paid to make stuff run reliably. But in a quick-change world like this, it's sufficient to put up with a manageable amount of disruption.

No one is going to stop trading online because they couldn't get into their ETrade account for 20 minutes. This stuff is additive, and Schwab, ETrade, Ameritrade, Datek and others are feeding the habit. Copy their model. ■

DAN GILLMOR

# Why IT execs should pay close attention to Linux

**D**EAR MR. CIO: Your life is difficult enough already. You're grappling with the ever-alarming Y2K, the ever-later W2K (Windows 2000) and a variety of other crises. And now you have to deal with Linux. It's not that Linux is a bad thing. Far from it. Actually, Linux could be one of the best things to have happened to your enterprise in a long time.

If you have a bright IT staff, Linux has already infiltrated your organization. Somebody's probably running a server or three (maybe part of the intranet) on Linux and other open-source software like Apache. Your staff already knows Linux is a better technical solution for some jobs than Windows NT—and a lot cheaper.

Lately, you're hearing the increasing buzz about Linux and wondering if you should pay more attention.

Yes. You should, even though you're uncomfortable.

Several issues spark your natural discomfort. First, Linux is an outgrowth of the free-software movement, with whose political aims you will almost surely disagree. The Free Software Foundation (FSF) ([www.fsf.org](http://www.fsf.org)) promotes the idea that software users should be able to freely copy, distribute, modify and pretty much do anything with the code. Admit it: This conflicts with your basic ideas about intellectual property, whatever that is.

But Linux as we know it would not be around in its current form if not for its roots in the GNU project that the FSF's founder, Richard Stallman, launched long ago. Disagree with Stallman's politics if you wish, but admire the results when it comes to Linux, perhaps better named GNU Linux.

Second, Linux raises questions of control. If the source code is freely available, it's easier to fix bugs but also easier to muck with it. So establish policies that prevent major problems in your organization.

Third, you haven't found in Linux all the applications you expect from a "real" operating system. Well, that's changing, with a velocity that surprises almost everyone.

All the big software companies (except for a company in Redmond that talks a lot about cus-

DAN GILLMOR is technology columnist at the San Jose Mercury News. Contact him at dgillmor@mercurynews.com.

The New Defense

tioner choice) are porting key software to Linux.

Finally, and maybe most importantly, you could much rather pay for software and know you can call somebody when you need help with it. Until recently that hasn't been simple with Linux.

But that's changing, too — big-time. Look for IBM and Hewlett-Packard and other high hardware vendors to offer 24-by-7 support.

If that's too expensive, check out LinuxCare ([www.linuxcare.com](http://www.linuxcare.com)), a start-up that's attracted serious money from venture capitalists.

Bottom line: Give Linux a close look. Yes, it'll add some complications. But it may well be better for some jobs. It also could be the lever you need when your favorite monopolist comes calling with a price hike.

Impress your staff today — and your boss at budget time. ■

DAVID MOSCHELLA

## Microsoft will own Web authoring, thanks to IT's tacit support

**B**Y NOW we should all be used to the pattern. Whenever Microsoft introduces a major new version of its desktop office software, pundits all around the globe tell us that this time, IT buyers will sit on their hands and take their sweet time migrating. The reasons are nearly always the same. The new software is too expensive; the incremental

functionality is geared mostly toward power users; the training and installation costs are too high; and the return on investment is questionable.

IT, we are told, has more important priorities than rushing out to buy Microsoft's latest and greatest bloatware. This time, the cash spigot will

DAVID MOSCHELLA is an author, independent consultant and weekly columnist for Computerworld. Contact him at [dmoschella@earthlink.net](mailto:dmoschella@earthlink.net).

let loose only a trickle.

But as logical as these arguments always sound, they inevitably prove wrong. Between software hounded on new PCs, bearable upgrade prices and the need to maintain compatibility both inside and outside the enterprise, both individual and corporate buyers generally find it is easier to switch than fight. Dealing with the euro and nailing down the 2000 situation might delay things for a few months, but they will do little to

stop the eventual Office 2000 stampede.

Unlike Office 97, this time the functionality is clearly there. The ability to easily go back and forth between text and HTML formats makes Office 2000 a milestone in word processing, perhaps the biggest advance since the original Windows-based versions. As the Web becomes the world's principal information publishing platform, it will change the very nature of document creation, even the act of writing itself. In the future, when children learn English composition, knowing how to include links and support Web formats will be nearly as fundamental as mastering grammar and syntax.

HTML support will prove even more important in business. Corporations are already feeling the pressure to enable highly distributed Web authoring. They will steadily move away from the idea of running everything through a central Web publishing group. Eventually, all departments and most individuals will need to become their own Web publishers, with Web-ready documents flowing out of our daily work routines. This requires tools that every one of us can use.

All of this means more megabucks for Microsoft. Although its prices often seem high, they are not high enough to trigger a rebellion. For most users, Office 2000 will cost just a few

hundred dollars, but when this is multiplied by as many as 100 million copies, the rewards become astronomical. Once again, Microsoft will generate more cash than it can possibly use. The recent class-action-style lawsuits filed against Microsoft in Texas and California won't change this.

Microsoft has several viable office software competitors who make comparable and cheaper products. Is it Microsoft's fault that consumers simply refuse to buy from them?

It's a shame that the word processing, spreadsheet and presentation graphics businesses aren't more competitive. If there were several relatively equal vendors in each area, office software prices would likely fall by an order of magnitude. They might even become advertising-supported in the way that browsers are.

With the rise of both e-mail and HTML, document creation and management are being revolutionized, but alas, it does seem that it will be a revolution brought to you almost exclusively by Microsoft.

As always, the answer is not to stop buying new software, but to support non-Microsoft alternatives. This corporate customers consistently decline to do. Microsoft has a near monopoly on desktop office software because, apparently, that is what customers want. ■

## READERS' LETTERS

### Employee retention: The solution is simple

**I**T WAS very interesting reading about the successes of various IT professionals ("Looking Back," CW, Jan. 4). I read one statement that seemed to stand out on its own. There is a trend that has been the subject of many headlines, and it was summarized in the portion about Loc Kshum, which states that "nothing can guarantee retention in today's free-agent IT market."

I don't deny that retention is a very difficult, if not impossible, goal. I would like to prove that not all IT professionals need to ride the majority wave.

Personally, I enjoy the stability of being with one company. There are actually a large number of companies (though they remain the minority) that have exactly what it takes to retain talent. The company I

work for has done everything right. They pay well. They provide excellent benefits. They guarantee every employee a piece of the company.

In the almost two years that I've worked here, I haven't heard one complaint from my co-workers.

The companies that have problems retaining their staff are the ones not willing to go the extra mile. I think if more companies tried to care more about their employees than the bottom line figures on their quarterly earnings reports, they would discover this.

Jeremy Likness  
Woodstock, Ga.  
[JLikness@computer.org](mailto:JLikness@computer.org)

### When the workweek ends, stop working

**I** TAKE STRONG exception to the comment, "What do you think weekends are for?" in Susan Kay Rothman's letter on Ed Youdon's col-

umns (CW, Dec. 21).

Weekends are for spending time with your family or whatever leisure time activities you choose.

Weekends are not a pool of unpaid labor that management can use to compensate for poor planning and inadequate staffing.

If from time to time I choose to put in overtime, that does not set a precedent.

Seymour J. Weitz  
Annandale, Va.  
[Shmuel@AOL.org](mailto:Shmuel@AOL.org)

### Job-hunting at shows can be a losing game

**I** NCREased when I read the article about finding a job at a conference ("The Trade Show Find-A-Job Game," CW, Jan. 25).

Like the Society for Information Management, the Oracle Applications Users Group (OAUG) doesn't permit any type of recruiting at

our conferences, nor do we allow recruiters to attend or join. We're ferocious about enforcing this rule, and we've escorted people out of past conferences for violations.

Your readers should be very, very careful where they play this game, or they could find themselves being escorted out the door. Try explaining that to your manager.  
Laura Bray  
OAUG Communications Manager  
San Antonio

J. MICHAEL BROWER

## U.S. government must maintain control of Internet

**T**HE U.S. GOVERNMENT is privatizing the Internet — eliminating its benign stewardship and bringing us into the brave new world of voodoo Internet economics. Despite defending the surfing public's interests by sponsoring an initiative to protect online buyers, the White House at the same time has set in motion a policy that will drive up Internet-access costs monopolistically and make Internet access more exclusive.

Through the Commerce Department's National Telecommunications and Information Administration, the Clinton administration in 1997 proposed a nonprofit corporation to manage Internet domains.

J. MICHAEL BROWER is a contact person at a federal agency. Contact him at [jmichael@nita.gov](mailto:jmichael@nita.gov).

Today, a newly created private entity, the Internet Corporation for Assigned Names and Numbers (ICANN) is eclipsing the Internet Assigned Numbers Authority (IANA), a government-subsidized agency, to control the work formerly done exclusively by Network Solutions Inc.

Users could depend on the Internet — which was created in the U.S. using taxpayer dollars and nurtured by the government to become a key element in the global infrastructure — remaining a stable entity under that system for both individual and business users.

But as a private enterprise, ICANN could be bought or sold, perhaps to an owner unconcerned about ensuring broad access and usage, and perhaps to a foreign company or government that would seek to use the Internet as an economic or political tool.

That's a possibility under the current privatization move. There's still hope, despite the privatization move.

The contract with Network Solutions has been extended until the autumn of 2000. The privatization effort was to be consummated by Sept. 30, 1998, but (fortunately) still is under study. For the moment, IANA will continue the work of issuing numerical IP addresses and Network Solutions will administer domain name services. Network Solutions will continue to administer domains it has previously distributed.

It isn't too late — nor is it mere neo-pan Americanism — to suggest that the Internet be declared a strategic resource by its creator, the U.S. government, and not be left to possible domination by a

foreign entity through market manipulation. Maintaining the root server system that maps the domains to IP addresses must stay within the grasp of the same American public whose taxes originally underwrote the Internet.

Ironically, Web privatization will only cause consumers to demand reintroduction of federal oversight. The computing and online-service community can't self-regulate in areas of consumer protection nor with one voice respond to electronic-commerce taxation and encryption challenges. The only reliable guarantor of the Internet as a free medium is the U.S. government in its limited oversight role. Anything less forfeits consumer protection to unscrupulous profiteers and sacrifices the protection of children to the globalization of the Web.

The U.S. can't afford a global, private-sector dictatorship of this indispensable public resource. The very raison d'être of the Internet is the universal and virtually cost-free exchange of information. Without public oversight, for-profit motivations — in the guise of nonprofit companies — will impinge on our privacy and pocket-books.

This piece of information technology is ours and it shouldn't be for sale. ■

LENNY LIEBMANN

## Lesson from the toy factory: Treat IT as raw material

**M**OST ORGANIZATIONS are still struggling to understand the new role

information technology is playing in their business. Yes, executives realize that their strategic growth plans now include things like Web commerce and extranet bonding. But IT funding remains relatively flat, especially when it comes to infrastructure. One reason many companies are reluctant to invest more in infrastructure is that it's looked at as, well, infrastructure. It's considered "plumbing" and is therefore treated as a fixed-cost budget item like office space or manufacturing equipment.

But in the New E-economy, disk space and bandwidth are actually more like raw materials than capital assets. And that's a shift in thinking made by few executives — inside or outside of IT.

Look at it this way. Say you're running a toy factory and demand goes up. Do you get on the

phone and order more plastic so you can make more toys? Of course you do. You need that raw material to meet escalating demand. Would you decide not to order more plastic because you only budgeted for X tons of the stuff? No! You understand that raw materials represent a variable cost that changes according to market needs.

Similarly, in today's dynamic business-technology environment, things like bandwidth and CPU capacity have become our raw materials. We still have fixed "infrastructure" costs — salaries, network operations centers, development software licenses — but network pipes and Web servers don't necessarily fit into that category. A variable-cost view of IT resources that have conventionally been thought of as fixed assets has a variety of implications that suggest the following courses of action:

**1. Stop funding things like Web site capacity out of IT's line-item budget.**

If more people come to a site to order stuff, you need to be able to throw more money there without detracting from other fixed IT costs. Does Computerworld limit its number of subscribers based on paper and ink budget? Of course not. As IT initiatives generate more revenue, we have to apply the same logic to IT spending.

**2. Re-examine chargeback.** To use the toy factory analogy again, you don't simply have a corporate budget for plastic. You account for how much of it is being used for each product line. If you have to produce more Beltway Barbies, you charge your additional raw-material costs against that increased production cost. You don't simply amortize it across every doll line (including the Special Prosecutor Ken) that's struck on the shelves. Bandwidth is the same way. If a business unit is producing revenue and can justify higher bandwidth expenses accordingly, accommodate it. But a fixed-enterprise budget that has no link to specific business activities/drivers doesn't make much sense.

**3. Reorder outsourcing.** Right now, many executives look at outsourcing as a "like-for-like for less" deal. But if you look at network bandwidth and Web site capacity as raw materials, then the question you're really asking is whether you want to have a vertically integrated company. Does a toy company go into the plastic resin business? Maybe, maybe not. But it bases that decision on its need to control the quality and price of its plastic supply and/or whether it can make money selling plastic to other companies. Outsourcing should be a strategic acquisition/divestiture decision, not just a bookkeeping one.

Viewing certain aspects of IT from a raw materials/variable-cost perspective isn't easy, because we still think of systems as furniture ("desktops") and networks as plumbing ("pipes"). They're not. They're really just the visible evidence of the invisible activities they host — the moving, shipping and assembling of bits and bytes to create value.

By getting past preconceptions about what constitutes infrastructure, we can do a better job of focusing on that value creation and make smarter bottom-line business decisions. ■

Year 2000..... 42

MONTGOMERY WARD'S MORTON MEASE says the National Retail Federation's Year 2000 Survival Committee put competition on hold to concentrate on Y2K issues.

## WHERE IS THE WORLD ON Y2K?

IN MOST OF THE WORLD, the year 2000 picture is a bleak one. But competitors in some industries are teaming up to fix global problems and are posting their findings to help other year 2000 project managers. Financial services companies lead the way, but telecoms, airlines and retail groups also are forming alliances to stave off problems from the deadline no one can avoid.

# 58

## BRIEFS

## Competitor Comparison

What the nation's top two railroad companies are spending on year 2000

	CSX	UP
Portside 2000 made	164	167
Estimates of total year 2000 costs	200M	207M
Costs through Q3 1998	\$38.5M*	\$33M

\* As of April 22, 1998

\* Union Pacific said it had spent more than half of its estimated \$300M

Source: RAILROADS, NOVEMBER 1998, P. 12. RAILROADS WITH THE SECURITIES AND EXCHANGE COMMISSION

## Railway Starts Testing

The Canadian National Railway Co. in Toronto has awarded Mountain View, Calif.-based Fluorion Inc. a contract to verify its year 2000-readiness of its information systems applications that have been redesigned to meet the date change. Fluorion will use its Inspector II tool set to inspect and audit selected Cobol code from the railway's application portfolio.

## Health Care Pact

L.A. Care Health Plan, a nonprofit, publicly governed health plan serving Los Angeles, has hired Bethesda, Md.-based Computer Technology Associates Inc. (CTA) to provide it with year 2000 assessment and contingency planning services. Under the terms of the agreement, CTA will assist L.A. Care in evaluating the year 2000-readiness of its current health plan partners, including Kaiser Permanente Health Plan Inc. and Blue Cross of California.

## Utility Is Ready

Arctic Corp., a Spokane, Wash.-based electric utility, said it has completed year 2000 testing on all 11 of its power plants. After assessing nearly 15,000 embedded software components, the company's year 2000 team found fewer than 500 items that had any date-sensitivity - primarily metering, monitoring and data-collection devices.

## Feds Get 'C+' Grade for System Readiness

Clinton administration lauds improvement, but critics skeptical of government's progress

BY MATT HAMBLER

A congressional committee recently gave a "C+" grade to 24 federal agencies for their year 2000 preparedness, winning cheers from the Clinton administration because of the improvement from previous reports. However, one analyst questioned the grade, saying it doesn't make sense for the government to be outperforming the private sector.

U.S. Rep. Stephen Horn (R-Calif.), chairman of the subcommittee that issues the report cards, noted the "truly remarkable progress" during the past three quarterly reports, which were an "F" and two "D" grades, respectively. But he added that a "C" is disappointing.

Grades are assigned to the agencies by the House Subcommittee on Government

Management, Information and Technology based primarily on the percentage of mission-critical systems reported to be compliant. Those in the 90%-to-100% range get an "A"; 70% to 82% get a "C"; and 61% or below receive an "F." "Compliant" refers to a system that can process dates properly and has been tested to do so.

## March 31 Deadline

Horn said 89% of all 6,404 mission-critical systems in 24 federal agencies should be compliant by March 31. John Koskinen, chairman of the President's Council on Year 2000 Conversion, said he expects the level of compliance to be more than 90%. The original goal was 100% compliance. After March 31, federal systems are supposed to begin extensive testing.

Year 2000 analyst Howard Rubin is skeptical about the government's progress. "It is hard to believe the federal government is now overachieving and exceeding the readiness rate of private industry," said Rubin, president of Rubin Systems Inc. in Pound Ridge, N.Y. He said that, in general, the private sector is running 10% to

30% behind where it expected to be by now.

Cathy Hotka, vice president of information technology at the National Retail Federation (NRF) in Washington, said her organization is impressed that "some federal agencies are doing well." Nonetheless, the NRF's member pharmacies worry about the government's processing of Medicare claims, which could hinder prescription-drug payments, she said. ■

## DOCTOR OFFICE RISK NOT FATAL

Consultant: Senate concerns of Y2K ignorance no safety threat

BY BARR COLE-GOMOLINSKI

THE HEALTH CARE industry recently was singled out by the U.S. Senate as one of the most ill-prepared for year 2000, but that indictment exaggerates the risk to patients, according to industry observers.

According to the Senate's Special Committee on the Year 2000 Technology Problem, 90% of doctors' offices are unaware of the year 2000 bug, and many small hospitals are behind in compliance efforts.

The worry is that even if large health organizations fix their systems, they may become "infected" by exchanging data with doctors' offices or smaller health care providers that haven't.

That's unlikely, according to observers. "The truth is that

most doctors' offices are not that technologically complex," said Woody Taylor, a partner at KPMG Healthcare Consulting in White Plains, N.Y. If doctors had electronic links to hospitals, those links would usually be managed by the hospital's information technology department, Taylor said.

In fact, the nation's largest

hospitals have made year 2000 a top priority. According to the American Hospital Association (AHA) in Washington, eight out of 10 hospitals will complete their projects sometime this year. The AHA said that the year 2000 matter is placing a big financial burden on hospitals (see chart). It has called on the Food and Drug Administration to encourage medical device manufacturers to report on the year 2000 readiness of their products.

George Lewis, MIS director at Rural Health Services Consortium Inc. in Rogersville, Tenn., said the company, which acts as an administrator for nine area medical groups, is one of the lucky ones because it has an IT department. Some rural health care systems don't - and have as little as \$50,000 to spend fixing their systems

and hiring local consultants to do it, he said.

But Lewis doesn't see that as a public health risk. "In the worst case, we would do a lot of our work manually," he said.

"We might not get paid very quickly, but I think that's about the extent of it," Taylor said. "Still, health care is an intricate web of providers, insurers and suppliers, and health systems do have to look outside their own IT departments when assessing their Y2K position."

To that end, health care providers, pharmaceutical companies and insurers working under the auspices of The Odin Group, a research firm in Nashville, last week published a set of guidelines for developing year 2000 contingency plans at health care companies.

Columbia/HCA Healthcare Corp. in Nashville, said it plans to modify the Odin Group plan for its own use. That will involve agreeing with its business partners ahead of time on a set of alternative procedures that would let them function if systems fail. "The goal is to have a common approach across the industry," said Bob Springer, assistant vice president at Columbia/HCA. ■

100 beds or fewer	\$450,000
101 to 300 beds	\$1.2M
301 to 400 beds	\$2.4M
401 to 600 beds	\$3.6M

# CAR-BUYING SITE COULD HELP PUT GM ON THE ROAD AGAIN

Internet could boost automaker's market share, flagging since recent worker strike

BY BOB WALLACE

GENERAL MOTORS Corp. is tight-lipped about BuyPower, the online car-buying service it will debut this week. But experts said it could really stand out against online competitors like Autobytel.com Inc., Microsoft Corp.'s CarPoint, Cars.com and AutoWeb.com if it can effectively use information on dealer inventory and pricing that its competitors don't possess.

But without differentiating features, GM's service, quickly could be relegated to also-ran status against competing offerings from independent incumbents, experts warned.

Of the Big Three U.S. automakers, GM is ahead of Ford Motor Co., which is piloting an online new-car sales service. DaimlerChrysler also is piloting a service that would let consumers send vehicle con-

figurations to dealers, who would send price quotes via e-mail.

"The Internet is a very powerful tool, which could dramatically improve the efficiency of the sales process for GM and help it regain the market share it lost during the strike — something GM wants back dearly," said Richard A. Henderson, auto analyst at the Pershing division of Donaldson, Lufkin & Jenrette Inc. in Jersey City, N.J. GM's share of the U.S. auto market dipped from 30.4% in January 1998 to 28.2% a year later, mostly because of last year's strike, Henderson said.

The ability to scan dealers' new-car inventories would be an attractive enhancement because it would help customers find a dealer that has in stock the specific configuration they're looking for, experts said. The existing services let customers configure their

STAGE	PEOPLE USING ONLINE	
	1998	2000
Research and select vehicle	2.9M	7.9M
Find a dealer and price	800,000	5.2M
Choose financing, insurance and warranty	0.0*	300,000
Close the deal	0.0*	500,000

SOURCE: FORRESTER RESEARCH INC. \*BASED ON 1998 DATA

dream car but refers them to local dealers that may not have the car in stock.

"Tying in to new-vehicle inventories would change this and be a big potential benefit for GM because none of the independents can do it," said Chris Denovo, auto industry analyst at J.D. Power & Associates in Agoura Hills, Calif.

The GM service also could benefit the company by providing pricing information on competing vehicles, which could prevent users from leaving to browse a rival's lineup. "If I'm on the GM site looking at minivans, I want to see pric-

ing for minivans from other companies without having to leave the site," said James McQuivey, an analyst at Forrester Research Inc. in Cambridge, Mass.

Online shoppers also would welcome easy access to the prices that GM charges dealers for vehicles. But dealers would likely oppose such a feature — even though the information is already available on the Net — because they prefer to negotiate by starting from the higher sticker price.

"They'll all kick and scream, but it will happen," McQuivey predicted. ▀

## Online Shoppers Want On-time Delivery

Service asks buyers about Web experience

How do you know if customers are happy with online purchases? Ask them, says Farhad Mohit, president and CEO of BizRate.com in Los Angeles, a service that queries online buyers about their shopping experiences at Internet stores.

But you have to ask customers if they're still happy when they receive the merchandise, not just when they buy it, says Mohit, whose service has more than 600 Internet stores as subscribers. (BizRate offers basic feedback free to online merchants but charges for more detailed analysis of surveys.) BizRate

BIZRATE'S FARHAD MOHIT says online shoppers love the product selection

follows up with a second questionnaire on the date of delivery.

Computerworld senior editor Sharon Machlis spoke with Mohit last week at the Direct Marketing Association's Net-marketing conference held in Los Angeles.

**Q: What are consumers' biggest complaints about shopping online?**  
**A:** The biggest frustration complaint is it's not easy enough to order — they make you jump through hoops. It's surprising that sites don't make it easy.

[The biggest] back-end [complaint], far and away: out-time delivery. [Retailers have

to] set the expectations and meet the expectations. If you say two weeks and it's [delivered] in two weeks, you're cool. ... You lose 50% of your customers if you don't do something as simple as that. [According to BizRate.com surveys, 85% of those who received their merchandise on time say they would shop at that Internet store again, but only 33% of those who didn't get their order when promised say they would shop at that store again.]

**Q: What things make people happiest when they're shopping online?**  
**A:** By and large, they love the product selection. A lot of comments are, 'I could never have found this in my hometown.' They like searching a million books, looking at reviews before they buy, listening to music snippets before they buy. These are value-adds.

**Q: What issues do you expect Internet retailers to be addressing in the next six to 12 months?**

**A:** Increased competition. There are very few people in the [retail world] who are not thinking about taking whatever they're doing online, being disintermediated by manufacturers [take out of the sales loop]. We hear from merchants all the time who are worried.

We are steadily seeing a decline in our [consumer satisfaction index]. Consumers have become more savvy online. There is higher scrutiny and expectations.

Everyone is talking about how the trend is moving from 'land grab' [trying to acquire as much market share as possible] to converting [buyers] into loyal, repeat customers.

I don't subscribe to the 'land grab' is over. There's a plethora of [new] people coming in. You have to do the land grab as well as service the customers you already have. ▀

## BRIEFS

### Grocer News

Online grocer Peapack Inc. in Slacks, N.J., plans to open a distribution center in the San Francisco area during this year's second quarter, marking the third metropolitan area in which the company has moved from partnering with local grocers to using its own warehouse centers.

### No E-mail, Please

The Direct Marketing Association ([www.dma.org](http://www.dma.org)) in July will create an "opt-out" e-mail program through which consumers can register to not receive unsolicited commercial e-mail. President and CEO H. Robert Wientzen said last week. The program will be similar to others through which consumers can ask to be taken off telephone and U.S. Postal Service marketing lists.

### Portal Reach

A study recently released by International Data Corp. in Framingham, Mass., finds that 22 million home Web users may not be faithful to a particular Internet portal site, but many leading sites are building a loyal user base. "The Power of Portals: Who's Using Them and How" presents metrics for determining the success of Internet portal sites — measurement tools such as audience reach, visit duration and visitor loyalty. The top portal site profiled is Yahoo Inc., with a reach of 47% of the total home population. The research also gives a methodology for determining the cost of obtaining a referred visitor.

### Top Types of Online Brand Abuse

- 1 Unauthorized use of logos and images
- 2 Use of hidden and visible text
- 3 Unauthorized use of a company's name or product in meta-tags
- 4 Software, music and video piracy
- 5 Unauthorized distribution or sale of consumer goods

## VIRTUAL REALITY SAVES ON TRAINING

*Productivity, confidence up for new loggers who use it*

BY DAVID GREENSTEIN

**E**VENTUALLY, FORESTRY students at the Education Center in Abildalen, Sweden, have to train in a real tree harvester, but logging some hours in a virtual reality simulator is proving to be the clear-cut choice for safe and cost-effective training.

This winter, teacher Tomas Wiklund experimented with virtual reality as a teaching tool and said he found that students who first used a simulator were more confident and productive when they started driving the real machine. Students who jumped right into operating the intimidating machine—which cuts down and carries 90-ft. pine trees with a 33-ft. arm—were more

nervous and thus more dangerous.

Long a staple in aviation and the military, virtual reality training is only now catching on in other industries, said Roy Latham, editor of the "Real Time Graphics" newsletter and president of Mountain View, Calif.-based CGSD Corp., a virtual reality research and applications firm.

After some premature enthusiasm about virtual reality technology a few years ago, many companies became disillusioned with mediocre technology that simply didn't simulate reality well enough, Latham said. The industry has had to win back credibility as its technology improved. "We are early in that phase," he said.

Although several universities are ac-

tively researching virtual reality training applications, most companies that have invested in virtual reality are more interested in prototyping manufacturing concepts, Latham said. Caterpillar Inc. is one of them, having worked with the University of Illinois for more than four years on virtual reality systems that model products.

According to the journal *I/S Analyzer*, Chicago-based Amoco Corp. has used virtual reality for truck-driver training, and Bethel, Conn.-based Duracell Inc. has used it for improving workers' skills on the factory floor.

Wiklund said the simulator is a bit slow and offers only a frontal view but is a worthwhile asset. Experienced operators can find nuances that don't feel right, giving the simulator limited value for more advanced loggers, he added.

But the simulator, made by Pargas, Finland-based Partek Corp., accounts

**VIRTUAL REALITY** simulators, like this logging simulator from Partek Corp., are becoming viable training solutions

for terrain, weather conditions and the size of each tree and log to simulate both normal and dangerous working conditions. The simulator is based on a Silicon Graphics Inc. Onyx2 server and software developed by Montreal-based Lateral Logic Inc. It costs about \$100,000 less than a \$400,000 harvester, and its 65-in. screen can be used to teach several students at a time.

Wiklund said it also simulates a harvester's onboard computer systems, which calculate where to cut a tree to maximize the value of each log. ■

For the "As Seen on TV" company, measuring marketing success is a snap.

## A Data Warehouse, 18 Months Later

*Cendant cross-markets brands using customer records*

BY JANAMUR VILJAYAN

A huge data warehouse that \$10 billion franchiser HFS Inc. finished before it was acquired by CUC International Inc. is proving to be a powerful cross-marketing tool for the merged company.

The \$5.5 million data warehouse—finished by HFS in August 1997—is helping the new entity, Cendant Corp., find new opportunities by combining HFS's travel-related operations and the giant direct-marketing business of CUC, said Scott Anderson, executive vice president of sales and marketing at Cendant (CW, Aug. 18, 1997).

HFS owns brands including Avis Inc., Howard Johnson International Inc. and Ramada International Hotels & Resorts. CUC, a Stamford, Conn.-based owner of several consumer home-shopping membership clubs, acquired Parsippany, N.J.-based HFS in late 1997.

Cendant used HFS's database to find that 40% of its time-share customers fly to their destinations (where they might need rental cars) and plan trips about 210 days in advance, meaning they could be reached by direct mail. With that information, Avis was able to offer special discounts and promotions in a campaign to which 22% of time-share customers responded, Anderson said.

"It has become apparent that each brand has a unique set of customers who have a unique set of psychographics and demographics" that can be targeted with unique services, he said.

That success now is prompting a similar campaign by Cendant's outdoor fishing and hunting club after the discovery that a high percentage of customers at Cendant's Super 8 motels also like to hunt and fish.

Still, a financial scandal, resulting in the exit of several senior Cendant executives last year, may have slowed technology initiatives like these, said Rob Nickolski, an analyst at U.S. Bancorp Piper Jaffray Inc. in Minneapolis.

"They have been pretty tight-lipped about some of their cross-marketing [initiatives] recently," Nickolski said. But based on the early success of a similar cross-selling venture that involved Cendant's real-estate and mortgage businesses, "I have reason to feel cautiously optimistic," he said.

The warehouse has more than 37 million customer records and 300,000 new ones that pour in monthly; the challenge is to maintain the quality of data and figure out how to use it, said Herb Edelstein, an analyst Two Crows Corp., a consultancy in Potomac, Md. ■

**CENDANT'S SCOTT ANDERSON** says the warehouse has opened out new opportunities

## Borden IT Morphs into Outsourcer

BY JULIA KING

Elmer's Products Inc. chose to outsource the lion's share of its information technology operations for the same reasons a lot of midsize companies do.

It lacked the technical talent to do the job in-house. It also wanted to concentrate on its core business of manufacturing Crazy Glue and other consumer adhesives.

More unusual was where the \$30 million manufacturer turned for help: to a reincarnation of the corporate IT department at its former parent company, Borden Inc. in Columbus, Ohio.

Less than two years after its spin-off from Borden, the multibillion-dollar food conglomerate, Resource Partner Inc. (RPI) has amassed a client base of some 30 midsize companies, including all nine of the independent companies into which Borden was reorganized.

Customers from outside the former Borden's include Dow Chemical Co., Sterling Commerce Inc., Donatos Pizza Inc. and Wendy's International Inc., the fast-food restaurant chain.

### Many Offerings

The IT department-turned-outsourcing vendor has significantly expanded its offerings beyond data center operations and network management services. It also offers design, installation, hosting and management of a wide range of enterprise software, including SAP AG, PeopleSoft Inc. and Denver-based J. D. Edwards & Co. applications. Additionally, RPI offers a range of business-process outsourcing services.

That was a deciding factor for Donatos Pizza's hiring of RPI, said Mike Sosinski, chief financial officer at Donatos, a UP-stored restaurant chain also based in Columbus.

"We were looking for both technical expertise and payroll-and-benefits expertise because there are a lot of [software] interfaces that have to be developed, such as interfaces for direct deposits to banks and interfaces to our group insurance company to pay group premiums," Sosinski said.

Sosinski fired the original systems integrator the company had hired to install People-

Soft's financial applications and once again hired RPI, which had implemented Donatos' human resources appli-

cations in three months. Because RPI also hosts and manages applications after they're installed, it has great incentive

to install them quickly and correctly the first time, according to RPI CEO Randy Kautto.

Compared with other applications and business-process outsourcing such as Electronic Data Systems Corp., RPI is a

David among Goliaths.

G2R/Dataquest analyst Roberto Larrigue is projecting RPI will prosper in the growing business-process outsourcing market, which is expected to reach \$900 billion by 2002. ■

# IT-SAVVY WINERIES TAKE A GRAPE LEAP FORWARD

Business systems, crop surveillance help vintners maximize yields

BY STEWART DEAN

**R**OOTED in soil, steeped in tradition and restrained by an aging process that can't be rushed, U.S. winemakers for many years weren't in a hurry to adopt new technology.

But that's changed in the past decade, since the L500 commercial wineries across the U.S. struggled to come back from a major industry recession. Now they seek to optimize business performance.

"Now, anyone with a vineyard over 20 acres uses some kind of data collection methods. And they are just beginning to see the results of their investments pay off in higher-quality grapes," said Richard Cartiere, editor and publisher of *The Wine Market Report*, a Calistoga, Calif.-based wine trade publication.

Levels of technology vary according to the size and sophistication of the operations, but enterprise resource planning applications, wine tank and blend tracking and applications for crop management are popular. Other applications are more exotic: PalmPilots that track vine health; satellite photos to monitor grapes; and in-ground moisture sensors.

## Vintage ERP

Like big companies in other industries, some of the largest vintners have branched into corporate systems that handle many business functions. Fetzer Winery, which makes 11.5 million gallons per year, is installing an SAP AG system to replace more than 20 Prime Computers systems it used for everything from order processing to production and distribution.

"We need to forecast our future costs as much as five years in advance and anticipate varietal trends," explained Scott Engel (scott\_engel@fz.com), a business systems analyst at Fetzer in Hopland, Calif. "The goal of implementing this is to optimize time and help the

upper management make better business decisions."

Delicato Vineyards in Manteca, Calif. — the eighth-largest winery in the U.S., producing 40.4 million gallons per year — also has implemented an SAP-based system. "Our lead times can be as much as

(GIS) and Global Positioning System satellite information, to track the health and maturity of its crop, said Jack Soper, a Gallo spokesman.

Comparing several years worth of data lets vineyard overseers recommend treatments that range from changes

WINERIES LIKE GALLO AND MONDAVI use technology such as satellite photos to monitor grapes and produce the highest-quality wines

six years ... so we have to know everything about our business to balance supply and demand far in advance," said Rita Graham (rita@delicato.com), the San Joaquin Valley-based winery's director of information technology.

But business forecasts aren't the chief challenge of having such a system: blending the strict business rules inherent in such a system with the craft of winemaking is. "Even with strict standards, we have to preserve variability in winemaking" and leave enough room for the winemakers' creativity, Graham explained.

Gallo Wineries, whose products run the gamut from inexpensive jug wine to fine wines, is the world's largest winemaker, with sales of more than \$1 billion and 341 million gallons produced per year. Its use of technology starts with neutron probes that measure soil moisture in the vineyards. It extends upward, combining weather pattern data with aerial and satellite imagery, and geographic information system

Michelle Winery also keeps a very close eye on its grapes. Its 13 vineyard observers walk the rows of plants each day looking for mold diseases, insects and growing patterns, keying the data into PalmPilots. The information is downloaded into a customized database every afternoon at the Woodemville, Wash.-based winery, which produces approximately 1.7 million gallons of wine per year.

"We used to do this all on paper, but now we can load the data much faster and quickly fix [plant] treatment recommendations back to the vineyard that same day," said Eric Wylie, an agricultural engineer at Chateau Ste. Michelle.

## Aerial View

Other vineyards make their observations from afar: by satellite. Some of the bigger vineyards, including Robert Mondavi Corp., contract with NASA for satellite and aerial photos that show leaf color, density and discolor patches.

That helps growers harvest grapes at the optimum level of ripeness, said Daniel Bosch, vineyard technical manager at Mondavi. Detailed aerial photos also can highlight the right grapes for Reserve wine vineyards, Bosch said, which can bring in \$400 per ton of extra revenue per acre.

The Joseph Phelps Winery in St. Helena, Calif., which produces 26,000 gallons per year, doesn't use satellites but does combine digital photography

with precise geographical (GIS-based) data so that it can determine appropriate treatments for individual vineyard rows and sections.

Then the Sonoma County-based vineyard can thin the plant leaves (giving the grapes more light and air and maturing them faster) or change the soil nutrients as needed, explained Craig Williams, the winemaker at Joseph Phelps.

But where technology really saves Williams' time and reduces headaches is in tracking individual tanks of wine through the complex varietal mixing and blending process.

**They are just beginning to see ... their investments pay off in higher-quality grapes.**

**RICHARD CARTIERE,  
THE WINE MARKET REPORT**

For a winemaker, keeping precise blending records is akin to a painter keeping logs of exactly how many tiny drops of paint were combined to achieve distinctive brilliant colors.

Several small to midsize California wineries keep their blending and tank tracking data in software called PC Blend from Blend Winery Software LLC in Petaluma, Calif.

The software also helps them make sure strict federal labeling guidelines are followed. Chris Munsell (cmunsell@vsn.com), assistant winemaker at Geyser Peak Winery in Geyserville, Calif., said such software also helps Geyser Peak — producer of 2.5 million gallons per year — track the alcohol content in each different tank for tax classifications.

"This type of technology has done wonders here," Munsell said. "Now, I can spend my time making wine rather than sitting at my desk calculating [wine] composition changes." ■

FETZER WINERY IS INSTALLING AN SAP system to handle everything from order processing to production and distribution

## You'll be hearing from them on January 3, 2000.

If your Y2K remediation is complete, congratulations are in order. But there are still questions, especially in case of a lawsuit: has the work been independently verified? Can you prove due diligence? Have you made contingency plans for Y2K emergencies? Have you got business continuity plans in place? ADPAC has the tools and the training to make the answer to all those questions "yes"

ADPAC SVReview is the automated COBOL tool that verifies Y2K changes, regardless of the methodology or vendor used. It provides the independent reports and audit trails that will support due diligence - critical information that companies will need in defending themselves against potential litigation. SVReview also helps you guard against recomputation of remediated code, whether it occurs as a result of routine maintenance, reengineering, or the introduction of new code that's not Y2K compliant.

ADPAC SWAT (System Wide Analysis Team) Training is an intensive, 5 day course that prepares your rapid response team to deal with Y2K emergencies that can cause crashes, inaccurate data, business slowdowns, and more.

You'll find ADPAC tools on IBM and compatible mainframes in many of the world's largest corporations, utilities, university computer systems, and critical government mainframes. Find out more from ADPAC, or from one of our Consulting Partners, including Platinum technology, Renaissance Worldwide, Intertec Communications, The Trotter Group, TranSys, and MTS People's Source. SVReview is one of the ADPAC SystemVision family of tools.

## IT'S UNIX.

Proven in the last two decades, UNIX is here to stay. UNIX is the backbone of the Internet and major industries like finance, manufacturing and retail. IBM is the largest server company in the world, and we're applying all of our knowledge of UNIX systems and software to build powerful e-business solutions that are transforming the way companies are doing business.

### RS/6000 - THE WORLD'S MOST POWERFUL UNIX SERVER

The RS/6000 is IBM's line of powerful, reliable, scalable UNIX servers. How powerful? We built an RS/6000 SP capable of 3.88 trillion peak calculations per second.

RS/6000 technology is so reliable that it was adopted for use by NASA on the Mars Pathfinder mission.

RS/6000 is so reliable that it is the number one UNIX machine for Web operations handled per second - 10% more than its nearest competitor.\*

### RS/6000 - #1-RATED UNIX SERVERS AIX - #1-RATED OPERATING SYSTEM

D.H. Brown Associates, after evaluating the leading UNIX vendors' results on a variety of standard benchmarks, rated IBM RS/6000 servers number one overall - with its competitors far behind!

D.H. Brown Associates also rated IBM's UNIX operating system, AIX, as the overall functional leader, ranking number one in system management and Internet/intranet.† Learn more at [www.dhbrown.com](http://www.dhbrown.com)

### MOST TRAFFICKED WEB SITES IN HISTORY

IBM's UNIX is working. Last year's US Open tennis Web site handled 383 million hits from 157 different countries.

RFL, the Seattle-based retailer of outdoor equipment, has seen its online store become one of its top revenue-producing stores.

CD Warehouse is combining its inventory from over 300 stores into a single database and is making it available online in its entirety.

Every day, Year 2000-ready IBM RS/6000s handle transactions worth billions of dollars.

IBM

## BRIEFS

## Hiring Plans

Second quarter 1999 hiring demand

## CSC Buys Italian Integrator

Computer Sciences Corp. acquired Informatica Group SpA, a \$30 million Italian systems integration company. The Torino, Italy-based company's 500 information technology workers will report to CSC's European headquarters in Farnborough, U.K. Informatica Group's clients include Fiat SpA, Eni, Telecom Italia and the Italian Ministry of Defense.

## Measuring IT Performance

The Computer Group, a Kingwood, Texas-based IT consulting, has created a management tool called the IT Dashboard to help organizations measure the performance of an IT organization in the following six categories: operations, internal operations, financials, innovation and learning, customer and business value. The tool is also intended to provide periodic

updates on what's working and what's not in IT shops.

## New Books

Two books on business and IT have just been published. Co-authors Tom DeMaio and Timothy Lister have edited eight new chapters to their classic on software development projects, teams and people. The second edition of *Peopleware: Productive Projects and Teams* (284 pages, softcover, Dorset House Publishing Co., New York) costs \$39.45, postpaid. In *Free, Perfect and Now*, Marshall Industries CEO Robert Riedel tells how the electronics distributor re-invented itself for the Web. The 254-page hardcover (Simon & Schuster, New York) retails for \$25.

## Read Ads, Earn \$

Cybergold Inc. today is slated to launch a Web portal for authors of "interactive-based" products. At the site ([www.cybergold.com](http://www.cybergold.com)), consumers will earn money or credits toward purchases for responding to advertisements. The site will also feature a section for buying goods such as music, software, maps and news articles at prices starting at 25 cents. Consumers become members of the site with accounts that accrue credits. The portal uses the flat to lower distribution costs so that media content providers can offer potential customers videos and written works, for example, said Steven Parker, the Berkeley, Calif., company's chief operating officer.

## Net Regulars

PETER G. W. KEEN

## IT's next target

THE "INFORMATION ECONOMY," "intellectual capital" and related buzzwords really are about four things: Talking, listening, searching and reading. They're the four ways information comes to us. IT has already expanded our information space in the first three. The next opportunity is reading. We expand talking through audio and videoconferencing, e-mail, voice mail and groupware. We expand

listening in many ways: through CNN and ESPN, by digitizing and distributing education courses and through conference speakers. Obviously, IT makes it practical and easy to look up information. Just think of the convenience of Amazon.com. And consider AltaVista and Yahoo, which accomplished what the Encyclopedia Britannica and your college library never did — made it fun and easy to look things up and play with information.

So far, technology has had little impact on reading. Readers still rely on paper and will do so for years to come. Books, magazines and newspapers offer an ease of access, portability and level of resolution that personal computers still can't match. Take Computerworld: It's a primary information medium for its readers, with the Net version a secondary resource. I doubt if more than a few of its subscribers would, at this time, prefer a fully electronic version.

Over time, the advantages of paper will erode. The first generation of electronic books, such as the Rocket Ebook, aren't yet satisfactory substitutes but will get better fast, just as the Apple Newton failure was the dry run for the wonderful PalmPilot. They promise attractive storage capabilities: from 10 to 30 books easily downloaded from the Web. I'm sure they will transform how college students work. Soon — three years at the most — when students register, they'll have all the reading for a semester's courses on the equivalent of a laptop, with facilities for searching and annotating the text.

When this happens, IT will begin to have the same impact on reading as it's having on talking, listening and searching. Think of an electronic Book of the Month Club: What could be the IT equivalent for both IT professionals and businesspeople? What books would IT like its users and clients to browse through? Is there a

core library of books that should be distributed across the business?

Take a look at the office bookshelves of any senior business managers you visit. From my own eyeball survey, I don't think you will find many books that help you and them build the business-IT dialogue your firm needs.

You don't need to wait for e-books. Use technology now to communicate your recommendations. All you need is to add a Books to Read page to any relevant intranet, sign up to be an Amazon Associate and add a message: "To buy

any of these books, click here" — where "here" is the link to Amazon.com. Amazon.com even pays you a good commission for any sale emanating from your site. In this way, you can improve understanding between IT and business by using books to get the IT message across or by directing IT's own attention toward the best IT-relevant business books.

Why haven't companies done this, even though many managers use Amazon.com? My guess is that it's because the process of reading physical books isn't seen as part of IT. But it is, and IT doesn't have to develop anything. The authors did that.

Books are the most powerful information catalysts of all. Das Kapital and Mein Kampf are evidence of that in the political history of this century. In Search of Excellence and Reinventing the Corporation are business examples. Jeffrey Moore's *The Gorilla Game* and Clayton Christensen's

*The Innovator's Dilemma* are the most influential intellectual forces in Silicon Valley today. What's on your bookshelf is far more of an information asset than what's on your firm's intranet. ■

Keen is the co-editor of a newsletter called "YOU2K Now." For more information, visit his Web site at [www.you2k.com](http://www.you2k.com). His Internet address is [peter@peterkeen.com](mailto:peter@peterkeen.com).

The background of the advertisement is a collage. At the top and bottom, there are horizontal bands showing a close-up of computer circuit boards with various components and connectors. On the right side, there is a vertical strip showing a close-up of a person's eye, looking towards the left. The central text is contained within a white rectangular box that has a black border.

# ABCs & H-1Bs

By Julia King

“

Our hope is that the visa cap won't be reached before the end of the fiscal year. If it is, it'll put another damper on our business.

DALE HEIDER, VP,  
RESOURCE SUPPORT ASSOCIATES

## Living with the new H-1B visa regulations in 1999

**D**ALE HEIDER is worried. This year, U.S. employers can hire 50,000 more foreign workers on H-1B visas than in 1998. Yet Heider is concerned it still may not be enough.

Last year, Heider's company, Resource Support Associates Inc. (RSA), a 450-person information technology consulting firm in Englewood, Colo., forfeited an estimated \$350,000 in business. The reason? It simply couldn't obtain enough H-1B visas to hire foreign-born IT workers.

This year, "Our hope is the visa cap won't be reached prior to the end of the fiscal year. If it is, it'll put another damper on our business," says Heider, who's the company's vice president of finance and general counsel. Approximately half of RSA's IT workers are foreign nationals.

So even with this year's increase, RSA — like most U.S. IT employers — is wasting no time obtaining H-1B visas for the current year. Indeed, between last Oct. 1 — when the cap was raised to 115,000 visas for the 1999 fiscal year — and December more than 59,000 H-1Bs were issued, according to a December report by the U.S. Immigration and Naturalization Service.

"We still have to rush everything for fear that even the new quota will be hit [before the end of this fiscal year]," says Suzy Nesbitt, human resources manager at Cary, N.C.-based SAS Institute Inc. SAS, which develops and sells data warehousing and decision-support software, currently employs approxi-

mately 25 IT workers on H-1B visas.

Last year, all 65,000 H-1B visas available under the old cap had been issued by May — a full five months before the end of the 1998 fiscal year. In 1997, the quota was reached before the end of August.

A company must sponsor a particular foreign worker for an H-1B visa. It can't apply for a visa without a specific worker in mind. This year, in addition to raising the cap on visas, Congress also raised their cost significantly. Subsequent to the congressional ruling, known as the Anticompetitive Workforce Improvement Act of 1998, the U.S. Department of Labor also applied a

number of new, more stringent H-1B qualifications. These include requiring employers to show that no U.S. worker is available to fill positions for which they want to hire foreign nationals.

Congress instituted a \$500 fee when it raised the H-1B cap last summer. The money is placed in a fund to finance training programs for American workers. Additionally, employers pay a \$100 filing fee plus attorneys' costs. All told, companies estimate the cost of obtaining an H-1B visa under the new regulations will range from \$1,300 to \$2,500, including attorneys' fees.

Yet for most IT employers, including Oakdale, Pa.-based Mastech Corp., the additional fee is "simply the price of doing business" in the midst of the ongoing global IT labor shortage, says Sushma Rajagopalan, vice president of global resources.

"Yes, the filing fee has gone up dramatically," Rajagopalan says. Nonetheless, she adds, "we'll continue to recruit from all over the world."

Virtually every kind of company, from retailers to manufacturers, has applied for and obtained H-1B visas for foreign-born IT workers. During the past few years, however, IT consulting and staffing firms have become particularly dependent on H-1B workers.

### Paper Gnat

At Cyber Information Services in Englewood, Colo., the new, higher fees have meant more paperwork, which eats up more of managers', recruiters' and administrators' time, says Karen Frey, director of recruiting.

"The extra \$500 fee for training means more paperwork because that money has to go in with the application. That means getting a check from accounting, then going back to account-

## History of Visa Caps

**1991** First visa cap is introduced

**1996** Visa cap is reached for the first time by year's end

**1997** Visa cap is reached in August — two months prior to the end of the fiscal year

**1998** Visa cap is reached in May, more than five months prior to the end of the fiscal year

**1999** Cap raised to 115,000, beginning with fiscal 1999

SOURCE: U.S. BUREAU OF LABOR STATISTICS

H-1B visas, page 56

# ABCs & H-1Bs

Continued from page 55

ing again later to get another check for attorneys' fees," Frey says.

In the final analysis, "it's not so much the increased cost that is the issue, but for us it's the time commitment. All of the back and forth with paperwork and the phone calls adds up, especially when you multiply it by 100 or more visas a year," Frey says.

At least one IT employer, Kevin Dempsey, director of new business at New York-based Princeton Information, says he's satisfied with the new visa cap. The main reason is that demand for H-1Bs at his company, whose primary business is year 2000 remediation work, is on the wane.

As year 2000 work continues to wind down, "our demand for H-1Bs has actually gone down a little bit," Dempsey says. ■

There's a fear among employees from China and India that... even more people from these countries [will] want green cards.... So the H-1B increase is really a bittersweet pill.

SHEELA MURTHY,  
IMMIGRATION ATTORNEY

## How New H-1B Regulations Are Affecting Employees

**I**N 1994, it took all of four weeks for Koteeswar Subramani, a native of Madras, India, to apply for and obtain an H-1B visa through his employer, Ciber Information Services.

In addition to an undergraduate degree in computer science, Subramani held a graduate degree and had more than six years' experience as a programmer. Yet his education never came up during the H-1B application process.

"Back then, it was all very easy in terms of the number of days it took and the rules and regulations. You could have a degree in art and that would be OK. Or you could have been working in the computer industry without having any degree and that was also acceptable," he recalls.

Today, by contrast, Subramani has colleagues in India who have been waiting more than three months to obtain visas. They, too, have advanced degrees in computer science plus several years of information technology work experience.

### Jobs Are Waiting

They also have U.S. companies that are ready to put them to work immediately. Yet their applications — along with thousands of others — are trapped in a backlog created by last October's raise on the overall cap for H-1Bs.

"The H-1B process has slowed down

## How the H-1B Visa Regulations Have Changed Under the Old Regulations:

- Visa cap of 65,000
- Fines averaged between \$1,000 and \$2,000 per violation
- Employers required to certify payment of prevailing market wage rates to H-1B workers
- Labor Department could investigate an employer only after a formal complaint was filed

## Under the New Regulations:

- Cap raised to 115,000 for fiscal 1999 and 2000, then drops to 107,500 for fiscal 2001
- Fines can reach \$35,000 per violation
- Employers still required to certify payment of prevailing market wage rates
- Employers must pay a new, \$500 fee per visa. Money goes into a training fund for U.S. workers
- Labor Department can conduct random checks for five years at companies with previous H-1B violations

for a while because there are so many backups from when the quota was reached last spring," says Suzy Nesbitt, human resources manager at SAS Institute.

Recruiters and IT managers at other companies also report delays, which disrupt workers' lives, clouding them with uncertainty. Ron Botha, a database administrator from Johannesburg, South Africa, waited almost eight months to obtain his H-1B visa back in December 1997, during a previous application backlog. "It was nerve-racking for me, but it was even more nerve-racking for my wife," Botha says. For almost a year, "she didn't know what was going on" or if and when the pair would be picking up to relocate halfway around the world, he says.

### Strong Wage Guarantees

The good news is that once foreign workers do arrive stateside, they have even stronger wage guarantees under the new H-1B regulations.

Even under the old rules, employers were required to pay visa holders the same rate they would have paid U.S. workers, were they available.

The new rules, however, significantly empower the U.S. Department of Labor's power to ensure that those rates are indeed being paid, says Carl Shusterman, an immigration attorney based in Los Angeles.

Now, for example, government offi-

cials don't need to wait for an official complaint to be filed before launching an investigation of an employer suspected of underpaying workers.

Labor officials also can conduct random checks for five years at companies with previous violations. And fines have been significantly increased, from between \$1,000 and \$2,000 to as much as \$35,000 per violation, Shusterman says.

"This should take care of the [prevalent] issue of cheap foreign [IT] labor once and for all because if there are employers abusing the system, we're going to find out very quickly," Shusterman says.

For some workers, however, there remains at least one catch-22 to the new increase in H-1Bs.

It applies specifically to workers from India and China who are looking to obtain a permanent visa, or "green card," once their H-1B expires after a total of six years.

Due to country quotas, there already is a four- to six-year waiting period for green cards for Chinese and Indian workers, says Sheela Murthy, an immigration attorney in Owings Mills, Md.

"Now, by increasing the number of visas from 65,000 to 115,000, there's a fear among employees from China and India that now there will be even more people from these countries who want green cards, so the backlog and waiting lists will grow to six or seven years," Murthy says. "So the H-1B increase is really a bittersweet pill." ■

King is Computerworld's national correspondent.

# Does Wal-Mart Have A Case Against Amazon?

The core issue at the trial more likely will be whether Wal-Mart took reasonable steps to keep its technology secret from its competitors. The best evidence to prove this comes from Amazon.com's own actions.

DAVID W. JOHNSON, COUNSEL,  
FERWICK & WEST LLP

BY DAVID W. JOHNSON

**Yes!** WHEN AMAZON.COM Inc. went searching for engineers and managers to design and build a complex data warehousing system, it didn't focus on the talent pool in Seattle; Palo Alto, Calif.; Austin, Texas; or Boston. It went straight to the little town of Bentonville, Ark. Why? Because it wanted a unique and market-tested system, and only one such system existed—in Bentonville, the home of Wal-Mart Stores Inc.

But this complex system, many years and millions of dollars in the making, was Wal-Mart's proprietary trade secret. Amazon.com didn't hire just one or two of Wal-Mart's best information technology employees. Rather, it went to Bentonville to hire no fewer than 10 people, including the CIO. Each of these people had one remarkable similarity—close involvement with Wal-Mart's Retail Link and data-management systems.

The case is filed in the state of Washington. It's against the law for a company to solicit or obtain by improper means the valuable trade secret information of another company, especially a direct competitor. The odds against these specific 10 people being hired by

Wal-Mart claims Amazon.com stole trade secrets when it recruited 10 IT employees and is taking its complaint to court. Does Wal-Mart have a case? Two experts in technology law argue for each side

more random chance demonstrates a method in Amazon.com's hiring. At trial, a reasonable jury could easily conclude that Amazon.com had executed a calculated, predatory hiring raid in order to improperly acquire Wal-Mart's technology trade secrets.

The core issue at the trial more likely will be whether Wal-Mart took reasonable steps to keep its technology secret from its competitors. Ironically, the best evidence to prove this comes from Amazon.com's own actions. After all, if Wal-Mart had failed to keep its technology secret, rest assured that Amazon.com could have and would have located the information in the public domain and used it to build its own systems—without having to hire even one Wal-Mart employee.

In this case, Amazon.com's risk is to suffer not just a huge damage award, but permanent damage to its trademark and goodwill, which, in the age of electronic commerce, is perhaps its single most valuable asset.

*Johnson is of counsel in the Litigation and Intellectual Property Groups at Ferwick & West LLP, a Palo Alto law firm specializing in technology. Contact him at [DJJohnson@ferwick.com](mailto:DJJohnson@ferwick.com).*

BY KENNETH K. DORT

**No!** WAL-MART'S ATTEMPT to prevent a group of former IT employees from joining Amazon.com raises far-ranging questions regarding the mobility of skilled technicians in the Information Age. Wal-Mart's case is weak and, if allowed, would create not only bad policy but also bad law.

The law is well-established nationwide that an employer can't prohibit former employees from using their general skills that made them valuable assets. Although officers and directors have a common-law duty not to use trade secrets of their former employers to benefit subsequent employers, courts are very reluctant to apply such a duty to other employees, reasoning that it would likely prevent them from earning a living without bestowing any real benefit on the former employer.

Wal-Mart's claims, therefore, don't appear to involve the protection of any trade secrets. Rather, they seem to be nothing more than an effort to keep talented and valuable employees, or at least to keep them away from competitors. Despite its pretense of "secrecy," Wal-Mart fails to provide any evidence

Wal-Mart's claims... don't appear to involve the protection of any trade secrets.

KENNETH K. DORT, LAW PARTNER,  
GORDON & GLUCKMAN PC

or allegations demonstrating either how its alleged secrets are maintained or that any express agreements were entered with any of the former employees to protect those secrets. Further undercutting Wal-Mart's position is an apparent absence of any written agreement identifying either the scope of Wal-Mart's confidential information or the employees' post-employment duties. In short, requesting a court to impose obligations, which in hindsight may have been a good idea—as Wal-Mart does here—creates bad precedent and places the courts in the position of rewriting agreements, a position for which they were never intended and one they routinely reject.

Given the rapid shifts in the IT field, Wal-Mart's success would greatly restrict the market for skilled IT professionals. IT professionals receiving no express outline of their employers' trade secrets nor their post-employment options would be effectively barred from working for competing technology companies (Wal-Mart's case places no time limit on its employees' post-Wal-Mart duties).

The solution is to craft tightly worded restrictive covenants for employees who will be privy to confidential information. Those covenants should specifically outline all covered information and limits on an employee's post-employment options. That way, both employers and employees will know from the outset exactly where they stand. ■

*Dort is a partner at the Chicago law firm of Gordon & Gluckman PC. His practice focuses on intellectual property law and technology-related issues. Contact him at [kkdort@ggpc.com](mailto:kkdort@ggpc.com).*

**I**N JANUARY, a World Bank report estimated that only 21 of 139 developing countries had taken concrete steps to address the year 2000 problem. The report went on to anticipate year 2000 impacts on power, telecommunications, energy, food distribution and medical care in developing countries.

That bleak picture means another layer of misery for the developing world and additional year 2000 burdens for U.S. companies doing business abroad.

But the good news here is that the scope of the year 2000 problem has forced a few industries to work together to obtain and share information, develop resources and provide help around the world. "We are seeing a lot of good, cooperative efforts," says George R. Juncker, vice president of the Bank Supervision Group at the Federal Reserve Bank of New York and the Fed's point man on year 2000.

By collecting data on infrastructure issues around the world and issuing recommendations, these organizations have, in effect, become general resources for year 2000 project managers everywhere.

**FINANCE:** The financial community is a leader in year 2000 information sharing, and one of the chief vehicles for international cooperation is the Global 2000 Coordinating Group, representing 234 financial institutions, banks and securities and insurance companies in 46 countries — from Aetna Inc. to the Czech Republic's Zivnostenska Banka. Membership is free.

One subgroup, called Custody 2000, has identified several dozen top custodial institutions that safeguard currency and securities. Each Custody 2000 member is auditing the year 2000 preparedness of several of these custodians, eliminating the need for audits by other institutions. "That's the type of cooperation that will be needed over the balance of the year to get through the date change," Juncker says.

Other subgroups on year 2000 assessment, disclo-

sure, testing and risk management/contingency planning have issued extensive, detailed best practices papers that can benefit not just financial institutions worldwide but other businesses, too. The document on risk management, for example, offers suggestions for handling risks such as simultaneous failures in multiple systems and locations, cascading failures that build on one another and external failures. The paper also includes risk management time lines and checklists, tips for building and running a year 2000 command center and strategies for "wellness checks" of systems after the date change.

All the documents are available for free from the Global 2000 Web site ([www.global2k.com](http://www.global2k.com)). Juncker says that kind of sharing is essential because even though the U.S. financial industry is "well-advanced" on year 2000 work, "I would characterize international progress as uneven," he says. "The greatest vulnerability internationally is infrastructure," like energy, telecommunications, power and water.

The group has developed templates for countries to assess their status, and as responses trickle in, it's posting them on its Web site for anyone to read. Global 2000 is planning to use the self-assessments to identify countries, regions and infrastructure elements at greatest risk for year 2000 failure and then engage public- and private-sector assistance.

Given the international situation, Juncker says, "Everyone recognizes there are bound to be problems." So for the rest of the year, Global 2000 will focus on contingency planning, such as helping organizations plan for manual work-arounds and fallbacks.

**AIR TRANSPORTATION:** For air carriers like Federal Express Corp., the biggest international year 2000 task is assessing "vendors" — the 375 airports the company uses, and air traffic authorities around the world. "The general state of year 2000 awareness fluctuates widely outside the U.S.," says Di-

anah Allison, managing director of FedEx's year 2000 project. That's why the company and more than 250 other member airlines funded a \$20 million year 2000 project through the International Air Transport Association (IATA) last June.

The project is targeting every international airport used by IATA members. It identified more than 120 airport components — from runway lighting systems to fire trucks — likely to be affected by the date change. Then it began sending teams to assess year 2000 progress by walking through the runways and air traffic systems of high-volume airports worldwide.

That information is available to member airlines on a protected Web site so they can plan accordingly. For medium- and low-volume airports, IATA is providing regional training seminars and program support.

The association "has opened doors that couldn't have been opened otherwise," Allison says. "I can't imagine what we'd have done without it."

The IATA also has developed a set of compliance guidelines, including advice for setting up a year 2000 program, staff responsibilities, methodologies, inventory checklists, reporting and monitoring strategies, sample supplier letters and questionnaires, testing recommendations and legal considerations. The entire document is available at [www.iata.org](http://www.iata.org).

**TELECOMMUNICATIONS:** The International Telecommunications Union (ITU) Y2K Task Force, established in March 1998, has created a year 2000 workgroup on intercarrier testing. The group recently held a successful, limited, worldwide test. More complex testing is scheduled for later this year.

Last April, the task force distributed a 20-question self-assessment survey. Based on 328 responses from the offices of 287 operators in 132 countries, it has published an overview of individual telecommunications companies' preparedness by country on its Web site ([www.itu.org](http://www.itu.org)), information invaluable to telecom-

International year 2000 issues have forced competitors to team up to find answers and share them with the world By Kathleen Melymuka

# The Hunt for Global

munications industries and any company dependent on international communications.

The site includes other features useful to a general audience, such as guidelines on embedded systems and links to other year 2000 organizations.

ITU is using the self-assessment responses to identify regions with the greatest needs.

It has held workshops on four continents; more are planned.

ITU workgroups are looking at information management, contingency planning and relationships with outside groups, and the Web site includes contact information for key people in each group.

Despite those efforts, there's little confidence in the international telecommunications network.

"We are anticipating that many developing countries are not going to make it," says Skip Patterson, year 2000 project manager at Bell Atlantic Corp. in New York.

But working through ITU, Patterson is reasonably confident that at least the most vital links, among the world's primary financial centers, will hold.

## RETAIL:

Though most international year 2000 groups have grown from well-established international organizations, the U.S. retail industry's effort shows how much a domestic group can achieve.

Because changing fashions preclude stockpiling, information on international preparedness is extremely important to retailers — but hard to get, says Morton Mease, director of planning and technical services at Montgomery Ward & Co. in Chicago. Mease has quizzed overseas organizations, but "the information coming back is very vague and nonspecific," he says, particularly in areas such as the Middle East.

To leverage their information, Montgomery Ward and 159 other retailers have been sharing it through

the National Retail Federation's Year 2000 Survival Committee. Mease says members have put away their competitive attitude to cooperate on year 2000. "We're trying to share rather than waste time and money. This committee has been free and open about things we've done and mistakes we've made."

The committee has published "Ready or Not," an extensive guide to year 2000 best practices, on its Web site ([www.nrf.com](http://www.nrf.com)). It also has polled 82,000 international suppliers, including vendors of merchandise and technology, and posted the responses on a protected area for member access. It has met with agencies responsible for international shipping, oil, gas, electricity and telecommunications, but much of its best information has come from its own members.

When retailers visit overseas vendors, they report back to the group on local issues. Members returning from abroad recently reported that their suppliers weren't even thinking about infrastructure issues such as power and communications. "Infrastructure issues have not become part of their year 2000 plans until we raise it," Mease says, "and that's scary."

Melymuka is Computerworld's senior editor, management. Contact her at [kathleen\\_melymuka@computerworld.com](mailto:kathleen_melymuka@computerworld.com).

## Web Resources On International Y2K Issues

- The World Bank year 2000 site ([www.worldbank.org/y2k](http://www.worldbank.org/y2k)) includes tool kits for developing countries, links with international year 2000 Web sites and user groups, information on international providers of energy, embedded systems and telecommunications, plus financial services organizations.
- The federal government provides a gateway for year 2000 directories ([www.itpolicy.gsa.gov/mka/yr2000/g7yr2000.htm](http://www.itpolicy.gsa.gov/mka/yr2000/g7yr2000.htm)). It includes diverse international resources such as year 2000 Web sites for other countries and international organizations.
- The information project office of the European Commission ([www.jepo.ces.belfry2000/year2000.html](http://www.jepo.ces.belfry2000/year2000.html)) includes extensive year 2000 overviews for Ireland, Sweden, Italy, Denmark, Finland and Greece.
- The Organization for Economic Cooperation and Development ([www.oecd.org](http://www.oecd.org)) includes extensive lists of national and international Web sites on year 2000 and year 2000 government contacts for dozens of major countries. Information on readiness by country and sector is dated but still useful for comparison.
- The World Information Technology and Services Alliance ([www.witsa.org](http://www.witsa.org)) is working to create a central source for year 2000 information and crisis management assistance.

MORTON MEASE of Montgomery Ward says retailers are trying to share information on global compliance "rather than waste time and money."

# Glitches

# Dear Career Adviser:

Recently you wrote: "The best way to be sure you're always working is to get some experience with a popular, well-entrenched business package and application under your belt, whether PeopleSoft, SAP or Oracle-based — in other words, something really desirable in the market-

place." However, it can be hard to get in the door in these areas. I, too, have many years of experience but feel shut out of these areas at my own company. Often my employer hires outside consultants over internal people.

If I were Oracle- or PeopleSoft-trained, how hard would it be for me to find employment afterwards? I always see ads that specify one to two years' experience.

Is it worth the risk to spend thousands of dollars on training? Would I take a big cut in pay? — EXPLORING MY OPTIONS

## Dear Exploring:

Thanks for responding. Internally, employees do face stiff competition to be selected for this training, with its \$10,000 price tag, whether paid for by the employer or you individually. In fact, even companies that use training to motivate and retain employees feel defeated when a year

later, the newly trained person wants a substantial bump in salary or threatens to leave. However, whether your training is through your employer or on your own, companies agree that expertise in these packages is valuable. "Someone who has taken this initiative shows real merit," says one East Coast hiring manager at a large IT installation.

Remember: If you have hard-core technical (rather than functional) skills, opportunities abound. With training and project experience under your belt, consensus says you won't take a pay cut at all. Your career will get a real boost!

## Dear Career Adviser:

I would like to know where to find IT jobs that let me telecommute (I'm a systems analyst or programmer). I have an MBA, and I wonder if IT people are in fact telecommu-

ting. Are there more opportunities to telecommute (if you're in to department other than IT)? Like marketing? I also want to know if companies list telecommuting in their classified ads in newspapers? On Web sites? I am lost. — NO TIME TO DRIVE

## Dear Drive:

You're right: Finding IT jobs that allow for telecommuting is hard. In fact, even CareerPath.com, a site that consolidates thousands of job listings from major newspapers throughout the country, found only two job listings that contained the word telecommuting: one in IT and one from The New York Times.

From a recent government study on electronic commerce: "The Department of

Transportation estimates that up to 15 million workers may be telecommuting in the next decade." But the trick is to identify employers that tell you from the get-go that they let you telecommute, and that often happens only during the interview.

But if you aren't sure whether the new company allows telecommuting, be certain they want to hire you before you bring it up, and verify that your role isn't hands-on, day-to-day management. Then show that you understand and are prepared to fulfill specific tasks and demands of the new job and will telecommute only after you reach those goals. And don't suggest telecommuting if your new employer is an

"all-hands-on-deck" environment where everyone stays late.

## Dear Career Adviser:

I am currently employed by a large services firm working on an engagement to develop imaging applications. I'm not sure my current

company can find me new work in imaging, which is my most recent expertise, and my client wants to hire me. My salary is above all but the top level of IT

staff, and the person offering me the new job is in imaging and related technology only, not IT. I'm 54, in IT for about 30 years and consulting through firms (never independently) for more than 10 years. Should I move into a corporate environment? What criteria do I use to base my decision and what can I negotiate? When year 2000 dies, will I wind up mixed in with lots of other ex-Cobol, ex-systems people who are client/server (Visual Basic) types competing with newly trained, much lower-cost candidates? — GIMME SHELTER

## Dear Shelter:

If you're looking for security in the workplace, definitely don't coast into corporate! You could get pigeonholed, but good.

Debra Berman, senior recruiter at New Dimensions in Technology Inc. in Marblehead, Mass., notes: "The most important factor in your decision-making process should be related to the technologies you will be learning and using in your new position. So be sure you stay as close as you can to the cutting-edge technologies, and you'll be just fine."

Berman adds that people who accept high-paying assignments often return to the market a few years later with inflated salaries and possibly antiquated skills. ■

## WORKSTYLE BRIEFS

### Employers

WHERE MBAs WANT TO WORK Jobs at technology companies are among the most sought-after for people with MBAs from top schools, says a recent report.

A dozen technology firms — from the most to any one industry — owned the list of the 50 employers MBAs most want to work for, according to a report published by Vault.com, an online recruiter. It's based on a survey of 256 alumni from top MBA programs such as the Wharton School, Harvard University and the University of California at Los Angeles. Participants were asked to rank 100 companies and describe the ones.

Marcy Lerner, executive editor at Vault.com, said MBAs want to work for technology firms because they seek an environment where they can be entrepreneurial, make a contribution and earn good money. "I think they perceive high tech as the place to do all three of those," she said.

Anticipating the list is what Vault.com calls "the best" — a representative sampling of how participants view these companies, both good and bad.

"Generally, people have a pretty clear picture of those employers," Lerner said.

For example, among the descriptions for IBM: "Outting back on track," "versatile, flexible,"

"passion," and "turnaround experts." Microsoft Corp.: "Hated, but the establishment," "aggressive, demanding," "bitchy," and "cutting-edge, market leader."

Message Communications Corp.: "Cool, fighting," "good company going down," "boring but interesting," and "young, untested." Oracle Corp.: "Complainers," "aggressive, innovative, leading," "slow growth," and "too sales-oriented, not enough marketing." Sun Microsystems Inc.: "Wifeless," "demanding," "cool culture, but low upside."

### Behavior

#### IT DOESN'T BITE (MUCH)

IT jobs are among the safest in the country, at least as far as on-the-job assaults go, according to the U.S. Bureau of Labor Statistics (see

chart). The bureau studied reports of workplace violence — including hitting, hitting, kicking and beating — in six occupational categories: managerial/professional; technical/sales/support; service; farming; craft and repair; and operators and laborers.

The technical/sales/support group, which includes most IT jobs, had the fewest incidents in all categories.

gories. Those working in service had the most.

The data, culled from the bureau's Occupational Injuries and Illness survey by the Ohio Casualty Group in Hamilton, Ohio, dates from 1995 but is the most recent available. It recorded about 1,000 hitting incidents, about 2,000 assaults and scratches and about 10,000 reports of bites, kicks and beatings.

OCCUPATIONAL TYPE	MANAGERIAL/PROFESSIONAL	TECHNICAL/SALES/SUPPORT	SERVICE	FARMING	OPERATORS AND LABORERS
Managerial/professional	5,038	285	2,206		
Technical/sales	4,233	69	1,988		
Service	10,479	580	4,556

## JOE FIRMAGE IS OUT THERE

JOSEPH P. FIRMAGE was pure Silicon Valley gold. His \$200 million Internet consultancy, USWeb, was going great guns. Then along came a white-robed alien, who hovered over his bed for a chat. So swears Firmage, who has since spent most of his time and money searching for extraterrestrials. He departed USWeb posthaste and weathered a media snicker-storm. Is Joe Firmage a crackpot? A charlatan? Or a true visionary?

# 76

As with every new piece of enterprise technology,  
someone has to try it first.

**Microsoft**

Where do you want to go today?\*

The good news is, it won't be you.

**Introducing Microsoft® SQL Server® 7.0, tested and proven in companies like Pennzoil and HarperCollins.\*** With an impending merger on its hands, Pennzoil faced a rapid increase in its user base for SAP® R/3.™ In order to handle this mission-critical load, Pennzoil turned to SQL Server 7.0. Then there's HarperCollins. The publishing leader uses the SQL Server 7.0 data warehousing platform to process hundreds of gigabytes of data in order to make smarter and faster business decisions. To see who else is deploying Microsoft SQL Server 7.0 in their enterprise go to [www.microsoft.com/sql/](http://www.microsoft.com/sql/)

## Winner of the Database Race.

Ever wonder if there might be a new, powerful and easy-to-use database management system that can solve your performance and scalability problems?

It's called Caché - the "post-relational" DBMS that offers advanced object technology, Web connectivity and faster SQL performance. Caché can do so many good things that it has won a prestigious international award as "the most exciting new database product".

Caché is already in use today in hundreds of enterprises, ranging from small entrepreneurial companies to the world's largest client/server network.

Caché is the latest database technology from InterSystems, the worldwide leader in high performance database products for transaction processing, with over 2,000,000 users... and 20 years of database experience.

The "best new database" is from a well-established company.

## BRIEFS

## IT Sales Management Automation Tool

Evolve Software Inc. has announced a new enterprise software package, *ServiceSphere*, designed to automate tasks related to selling, managing and delivering information technology services. According to the San Francisco company, tasks include developing project requirements, scheduling workers with particular IT expertise and tracking project progress.

*ServiceSphere* costs \$1,000 per user.

[www.evolvesoftware.com](http://www.evolvesoftware.com)

## Service Tracks Leads

TargetSmart Inc. has introduced *ProSpecSmart*, software that helps retailers find potential customers. After the user selects demographic and geographic data combinations, the Denver-based company generates a database of contacts using outside sources. The contacts are then delivered on CD-ROM.

The service costs 10 cents per name or \$199 for unlimited names. [www.targetsmart.com](http://www.targetsmart.com)

## Aladdin Updates Uninstaller for Mac

Aladdin Systems Inc. is shipping *System Cleaning 3.0*, an uninstaller utility for the Macintosh. According to the Watsonville, Calif., company, new features include the ability to restore items, check for damaged files and search for "invisible" files.

Spring Cleaning costs \$49.95. [www.aladdinsys.com](http://www.aladdinsys.com)

## Web App Server For Solaris

Pervasive Software Inc. has announced the *Tango 3.5 Application Server* for Sun Microsystems Inc.'s Solaris operating system.

Web application developers using the *Tango 3.5 Development Studio* now can run their applications on the Solaris platform, according to the Austin, Texas, company. The server can integrate JavaServlet, Java classes and JavaBeans.

The server costs \$5,000. [www.pervasive.com](http://www.pervasive.com)

## MICROSOFT ZEROS IN ON MANUFACTURING

Pitches DNA, Visual Basic as cheap application integration tools

BY CRAIG STEGEMAN  
AND KIM S. NASH

**M**ANY manufacturing operations don't get much money to spend on integrating the different systems that run their plants — and that makes them a natural target for Microsoft Corp.

Microsoft is making a major push to convince cost-conscious manufacturers, and the software vendors that work with them, to build application interfaces with Visual Basic and its other development tools. That effort intensified two weeks ago when Microsoft announced a manufacturing-specific version of its Windows DNA development framework (CW, Feb. 4).

New technology wasn't part of the announcement, which mainly was an attempt to pack age existing tools more cohesively. Even so, some manufacturers are taking Microsoft's advice to heart.

OCEAN SPRAY'S MIKE SMITH keeps a close eye on integration budget

For example, Ocean Spray Cranberries Inc. is using tools such as Visual Basic and Microsoft's Component Object Model (COM) to build a new manufacturing execution system for its eight regional cranberry juice plants and to link the homegrown software to SAP AG's R/3 enterprise resource planning applications.

Mike Smith, national manufacturing systems manager at the Lakeville, Mass., company, said he must justify the investment in the new system at each plant. The Microsoft tools are helping cut costs and development time up to 50% compared with writing procedural C code, he said. In one case, Ocean Spray reused COM ob-

jects to extend a software module that manages juice blending so that it also controls the cleaning of pipes and tanks. "Traditionally, that was two completely different sets of code," Smith said. This time, "We didn't have to write the software all over again."

Microsoft products are increasingly popular with manufacturing plants that run on tight budgets, said Bill Soranton, an analyst at AMR Research Inc. in Boston. AMR estimated Windows NT had a 49% share of the market for factory management systems last year and will grow that to more than 60% this year by continuing to displace Unix and IBM AS/400 setups.

Microsoft's companion development tools also could be an affordable alternative for companies that now shuttle data by "printing out reports and keypunching them into another system," Swanton said.

The Gates Rubber Co., a Denver-based maker of rubber belts, hoses and other products, used to do just that. But Gates now is rolling out a combination of packaged applications that use Microsoft interfaces to pass production schedules and other data back and forth, said program manager George Sebastian. ■

## Exec Discusses IBM's E-Business Plans, AS/400

Sees initiatives to speed deployment

As general manager of sales and marketing at IBM's vast enterprise software group, William Zeidler presides over a technology portfolio that includes traditional host operating systems, distributed platforms such as Unix and Microsoft Corp.'s Windows NT, and a fast-growing sector of Web applications.

Zeidler recently spoke with *Computerworld* senior editor Jitkumar Vijayan about the state of the IBM's software business.

**Q: What are some specific IBM ini-**

**tiatives to help business partners tap in to electronic-business opportunities?**

**A:** We want to make sure our partners know how to talk about this... so we have a set of specific marketing campaigns aimed at helping them drive tactical sales. We have an application framework for e-business.

**Q: Our Start Now [suite of integrated e-commerce applications] helps them go out with something very specific to their customers and helps them install e-business applications.**

**Q: What does that mean for customers?**

**A:** Faster deployment and an architecture that will allow

them to connect [Web applications] into the rest of the company. We will give them systems that build on what they already have.

**Q: Has the growth of your Windows NT and Unix software businesses come at the expense of your traditional host operating system revenue?**

**A:** Our strategy is to maintain revenues from our host products and grow NT and Unix. IBM software overall grew by 9% last year. Now, 65% of the business is host and 30% to 35% is from distributed operating systems. When we formed the group four years ago, host operating systems accounted for more than 90% of [software] revenues.

**Q: Hasn't middleware been a high-growth area for IBM?**

IBM'S WILLIAM ZEIDLER: "We have an application framework for e-business."

**A:** There is a big push towards enterprise system management, improving reliability and just improving the returns on IT investments. A lot of companies are moving towards [enterprise application] integration and building on what they already have. It's the reason Tivoli has been doing very well for us.

**Q: Why has there been such a resurgence of interest in platforms like the AS/400?**

**A:** Part of the resurgence of both these platforms has to do with [the early expectations] around NT. Now everybody is being much more pragmatic about it. I think what the AS/400 [see story, page 63] has done well is make itself relevant to the things that are important to the market today. ■

## IE 5.0 ENHANCES WEB EXPERIENCE

New browser improves searching, data management

BY CAROL SLIWA

**A** WEEK FROM today, Microsoft Corp. will launch the new version of its Internet Explorer browser for Windows and some versions of Unix.

Version 5.0 is expected to give users improved search and management capabilities, a smaller minimum download size and upgraded standards support.

Although corporate users may find those improvements helpful, they probably won't be rushing to install the new browser.

"I've been underwhelmed. It's an evolutionary release. It's not a revolutionary release like IE 4.0 was," said Pamela Edwards, Web administrator at the Richmond, Va.-based Wheat First Union Wheatage division of First Union Capital Markets Corp.

Edwards said Wheat First likes to keep its browser lean, so it will use Internet Explorer

5.0 to help give administrators more granular control over the features they install on end users' desktops.

Some data-binding features also will work faster, helping users sort through stock symbols and their prices, Edwards said. But Wheat First doesn't expect to move to the new version until late summer. "Year 2000 is taking

precedence before we do any enhancements to existing systems," he said.

Another reason corporate users may wait to move to Internet Explorer 5.0 is because of deployment-management problems associated with rolling out new Internet technology, said Phil Costa, an analyst at Giga Information Group Inc. in Cambridge, Mass. Microsoft rival Netscape Communications Corp. — which last fall released Version 4.5 of its Navigator browser with new features — won't finalize its 5.0 version until later this year. The first public beta is due this spring.

Working through the open-source community, Netscape is revamping its browser engine, now called Gecko, to make it faster, more lightweight and modular.

So far, the Gecko engine is less than 2M bytes in size, as opposed to 9M bytes in the Version 4.0 engine.

Microsoft's browser is getting trimmer, too. The minimum Version 5.0 download will be 6.5M bytes, whereas the Version 4.0 minimum download was 12.3M bytes, a Microsoft spokesperson said.

The 5.0 release will be available on Windows 3.1, 95, 98 and NT 3.5 and 4.0, as well as Sun Microsystems Inc.'s Solaris platform and Hewlett-Packard Co.'s Unix platforms. ■

### New Features In IE 5.0

- Smaller minimum download size: 6.5M bytes (compared to 12.3M bytes on hard disk). Minimum download for IE 4.0 was 12.3M bytes (compared to 40M bytes on hard disk).
- More granular management controls. Greater ability to pick and choose features, network settings and preferences for and users' desktops.
- Improved standards support for HTML 4.0 Extensible Markup Language, Document Object Model and cascading style sheets.
- Intelligence. Can automatically complete often-used uniform resource locators and choose the best search engine to use.

## Sun Server to Offer Jini Component

Open Service Gateway spec will be supported

BY CAROL SLIWA

Sun Microsystems Inc. last week announced that the next major version of its small-footprint Java Embedded Server — which lets users install and change applications in a wide range of devices — will support the Jini networking scheme and an Open Service Gateway specification being worked on by a consortium of 15 vendors.

At its JavaOne Conference in June,

Sun officials said, the company plans to release an early-access copy of the new Java Embedded Server, featuring a Jini look-up and registry service component to help service providers install and administer network-based applications in homes and offices.

In the second half of next year, Sun said it plans to add support for the Open Service Gateway specification, which will provide connectivity interfaces for linking data centers to the LAN so that consumer and small business appliances can hook up to Internet services. ■

# INTEL'S TECH PUSH MAY OUTPACE USERS' NEEDS

**But businesses may see price advantage from constant rollouts**

BY GALEN CRUTMAN

**I**NTEL CORP. has a dizzying set of technology changes in store for the next several years (see chart). Should you jump on these new technologies or plan your major PC upgrades around Intel's plans?

"Honestly, no," said John Dunkle, a consultant at Workgroup Strategic Services Inc. in Portsmouth, N.H., echoing other analysts.

"I don't believe Pentium III will have as wide acceptance in the next six to 12 months" as Intel hopes, said Brad Day, an analyst at Giga Information Group Inc. in Norwell, Mass. Companies typically upgrade their systems every two or three years — at a fraction of Intel's pace, he said.

Among Intel's major initiatives are faster systems via new processors, buses, memory and other motherboard components.

The biggest benefit to companies may be that Intel's dom-

inance in PC technology means PC makers have little differentiation, thus making pricing their key separator, that gives users "more sources

to negotiate a price," Day said. Companies that do decide to buy new systems should think twice if they plan major purchases at the end of this year, said Tony Massimini, an analyst at Semco Research Corp. in Phoenix.

That's because Intel plans to use a new kind of RAM, called Rambus Direct RAM — or RDRAM — a technology the company has acknowledged will likely be in short supply. At its recent developers' forum, Intel suggested that PC makers prepare systems that can accept several types of RAM during that period. But such a strategy could introduce systems-administration headaches, Massimini said.

It may make sense for companies seeking to consolidate several server platforms to adopt the new Intel technology for widely used business applications such as e-mail and accounting, Day said. But for Web hosting, large databases and other historically high-performance, Unix-based systems, the forthcoming 64-bit Intel servers won't be serious contenders, he added. ■

## BRIEFS

## HP Adds Cheap Business PC

Hewlett-Packard Co. is expanding its Erio line with an entry-level business PC. According to the Palo Alto, Calif., company, it comes with an Intel Corp. 333-MHz Celeron processor, a 4.3-G bytes hard drive, 32M bytes of synchronous dynamic RAM and Windows 98.

The PC costs about \$699.  
www.hp.com

## Compaq Flat-Panel Monitors

Compaq Computer Corp. has two new flat-panel monitors: the TFT8000, with an 18-in. display supporting resolution up to 1,280 by 1,024 pixels; and the 15-in. TFT5000, which supports resolution up to 1,024 by 768 pixels.

The TFT8000 costs \$3,100; the TFT5000 costs \$1,199.  
www.compaq.com

## Procom Unveils Two NetFORCE Servers

Procom Technology Inc. has announced NetForce 2000 and NetForce 2200, two new network-attachable storage servers. The storage systems offer multiple RAID levels and support for file sharing between Unix and NT environments, according to the Santa Ana, Calif., company. The NetForce 2000 can house up to 1800 bytes; the NetForce 2200 can support up to 3000 bytes.

A NetFORCE 2000 configured with all 10 drives costs \$35,000.  
www.datacube.com

### Quad Research Web Server

Quad Research has introduced the Stratus Web Server. Designed to support up to 100 million page views per day, it has an embedded Windows NT operating system and dual computer boards, load balancing and up to 1456 bytes of Fibre Channel storage, according to the Riverside, Calif., company.

Pricing starts at \$43,000  
www.mazdausa.com

## Preparing for the Evolving PC

The following is a road map of how the key components are expected to change in Intel-based PCs in the next three years. Components listed are for advanced models at the time, rather than an average PC. Details, such as speed, are omitted where uncertain.

	Early 1999	Late 1999	Early 2000	Late 2000	Late 2001
<b>DESKTOP</b>	<b>Processor</b> 450-MHz Pentium II	600-MHz-plus Pentium III	800-MHz Pentium III	1-GHz Pentium III	IA-32 (Foster)
<b>Memory</b>	100-MHz SDRAM	100-MHz RDRAM	133-MHz RDRAM	RDRAM	RDRAM
<b>Internal buses</b>	33-MHz PCI, AGP 2X, ATA/33, ISA	33-MHz PCI, AGP 4X, ATA/33	33-MHz PCI wide, AGP 4X, ATA/66	33-MHz PCI wide, AGP 4X, new ATA	66-MHz PCI wide, AGP 4X, new ATA
<b>Ports</b>	PS/2, USB 1.1, 2 serial	PS/2, USB 1.1, 2 serial, AT keyboard, parallel	PS/2, USB 1.1, 1 serial, AT keyboard, parallel, 1394	PS/2, USB 2.0, 1 serial, parallel, 1394	USB 2.0, 1394b
<b>SERVER</b>	<b>Processor</b> 450-MHz Pentium II Xeon	600-MHz-plus Pentium III Xeon	Pentium III Xeon	IA-64 (Merced) or Pentium III Xeon	IA-64 (McKinley) or IA-32 (Foster)
<b>Memory</b>	100-MHz SDRAM	133-MHz RDRAM	133-MHz RDRAM	RDRAM	RDRAM
<b>Internal buses</b>	33-MHz PCI wide, AGP 2X, ATA/33, SCSI	33-MHz PCI wide, AGP Pro, ATA/33, SCSI	33-MHz PCI wide, AGP Pro, ATA/66, SCSI	33-MHz PCI wide, XDR, AGP Pro, ATA/66, SCSI	66-MHz PCI wide, XDR, AGP Pro, ATA/66

NEPC 1004-IEEE 1004, also called **Parallel ATA-Advanced Graphics Port**, **ATA-42** (on old IBM PC model) **Attachment** (for internal drives); **ISA-32**, **ISA-64**—**Internal Architecture**, which will have 32-bit and 64-bit versions; **NIIO-Network Interconnection**; **PCI-Peripheral Component Interconnect** ("wide" means a 64-bit version, rather than 32-bit); **RDMA-Random dynamic random access memory**; **SCSI-Small Computer Systems Interface**; **SRAM-static random access memory**; **UDMA-Ultra Direct Mode**.

# RETAILER FIRES UP SAN

*Burlington Coat, early adopter of storage technology, sees big throughput gains*

BY NANCY OLLSON  
BURLINGTON, N.J.

**F**IBRE CHANNEL-based storage-area networks (SAN) still may seem bleeding-edge to many mainstream business users, but Burlington Coat Factory Warehouse Corp. has had one sewn up for more than a year now.

"The industry invented the buzzword — SAN — and several months later we realized we already had one in production," said Michael Prince, CEO at the Burlington, N.J., discount clothier.

A SAN takes storage off isolated server buses and places it on a shared, high-speed I/O

pipeline such as Fibre Channel. SANs generally comprise servers, distributed storage and networking devices like hubs and switches.

A survey last August of more than 800 large information technology organizations worldwide by New York-based Find/SVP Inc. showed that only 12% were implementing a SAN, 35% were in the planning or evaluation stage and 53% weren't planning for one. "I don't think we took a risk as early adopters of SANs," Prince said, "SANs are proving themselves part and parcel as the most cost-effective way to build large-scale, managed systems.... In the low-margin,

SWITCHED FABRIC may mean one thing to a clothing customer, but to Burlington Coat it's an essential element in managing SAN traffic.

high-pressure business of discount retail, we embraced the technology."

Burlington uses three SANs, each based on symmetrical multiprocessing Non-Uniform

Memory Access (NUMA) servers from Beaverton, Ore.-based Sequent Computer Systems Inc. The company's many databases, divided among the SANs, use about 4T bytes total.

Each server houses 12 processors that connect to a disk pool via two dedicated Fibre Channel switches. Each server also has a dedicated tape backup library plugged in to one of its two switches.

Burlington Coat plans to combine the three SANs into one in about a year, after Prince finishes examining available technologies. "We're not totally there yet in terms of sharing one common I/O system among multiple servers. But our current switched fabric [a technique to route SAN traffic] has given us about a 3x jump in throughput," he said. Furthermore, "with a faster, more reliable infrastructure,

we can take people out of the hardware-tweaking business and use them to deliver something with real business value."

The SAN's throughput is letting Burlington Coat Factory add customer-tracking databases to the financial records and inventory databases now housed on the NUMA servers.

Because the switched fabric also offers more redundancy and the ability to schedule preventive hardware maintenance, it has translated into a "more rational working environment and easier staff retention," Prince said.

Matt Marchione, a systems administrator at Burlington Coat, said he once received six paper cuts related to system problems during a single night shift. Since the switched fabric was implemented, he said that number has dropped significantly. "Last week, I think I had two calls all night. I don't have to dread [on-call rotations] anymore," he said.

Prince said he hopes to exploit the distance gains of Fibre Channel in the next year. Soon he plans to open a second data center at the opposite end of Burlington Coat's headquarters property. "It will only be about a half-kilometer away, so I won't be using Fibre's full 10K distance.... But we'll locate half of our disk and half of our processors out there so if one center goes down, we'll be protected. We couldn't do that with SCSI's limitations," he said.

## Suite Links NDS, NT; Eases Shift to Active Directory

*Entevo's single console an edge*

BY SHARON GAUGHN

Entevo Inc. has introduced a directory-management product designed to tie together the highly disparate worlds of NetWare and Windows NT.

Entevo, in Arlington, Va., broadened its directory-management suite by releasing DirectAdmin V2.0. DirectAdmin for NDS and DirectAdmin NDS Plus Pack. The tools are aimed at helping information technology executives manage their operating systems under one umbrella as they prepare to move to Active Directory in Microsoft Corp.'s forthcoming Windows 2000.

"This is for customers who have decided the Windows 2000 server and Active Directory are where they're headed, and need to manage that transition," said Jamie Lewis, president of The Burton Group in Midvale, Utah. "If you're currently an NT customer, there's a problem with domains — you

can't delegate authority very well, or at all. And they're not hierarchical, which is what you'll have with [Active Directory]. That's a tough thing to manage."

Windows NT is built on a flat-file system, without domains or trees. The Windows 2000 operating system will move to a domain system in Active Directory.

NDS, or Novell Directory Services, is Novell Inc.'s operating system directory. Built for NetWare, it has been expanded to handle Unix and NT. NDS for NT reaches into NT's flat files, pulls out information and puts it in domains. Entevo's products, on the other hand, leave the flat files as they are and simply manage them.

Lewis said Entevo, unlike competitors such as Mission Critical Software in Houston and FastLane Technologies Inc. in Halifax, Nova Scotia, gives companies one console from which they can manage NT's flat files, NDS and the Active Directory hierarchy.

And it will help companies move their Windows flat files

to Active Directory.

"With this, you can make NT now look like Active Directory," Lewis said. "It's not [a directory], but it's a pseudohierarchy. That will help make the move a little more transparent, because instead of moving from a flat world to hierarchies, you can move from a pseudohierarchy to a hierarchy. It gives you a map."

DirectAdmin 2.0 costs \$19 per managed account. DirectAdmin for NDS costs \$10 per managed account. DirectAdmin NDS Plus Pack, set to be released this month, will cost \$10 per managed account.

## Smooth LAN Switching With Catalyst

BY BOB WALLACE

Why deploy fast, dirt-cheap 10M/100M bit/sec. workgroup LAN switches widely if you don't have a simple and affordable plan for tying them to your backbone network?

To help users with this predicament, Cisco Systems Inc. has introduced a high-de-

sire, low-priced Gigabit Ethernet switch that can aggregate traffic from 10M/100M bit/sec. switches onto campus backbone networks.

The Catalyst 4912 has 12 Gigabit Ethernet ports, which cost about \$1,300 each. They channel traffic from widely deployed 10M/100M bit/sec. LAN switches onto Gigabit Ethernet superhighways.

"Switches like the 4912 are a requirement in networks with tons of 10/100 buses, because they concentrate traffic into larger Gigabit Ethernet pipes," said Esmereja Silva, an analyst at International Data Corp. in Framingham, Mass.

# IS YOUR NETWORK OPERATING SYSTEM DELIVERING ALL YOU NEED TODAY?

You need your OS to be all it can be as you struggle to find flexible, scalable and powerful solutions to meet end user demands for more IT services and capabilities. So ask yourself, does your network OS:

- ▶ Yield fast and reliable file and print?
- ▶ Offer Web application services as well as streaming media?
- ▶ Handle sophisticated databases and other line of business applications?
- ▶ Provide advanced communications with integrated remote access while integrating features such as virtual private networking?

Next week in a special 12-page supplement in *Computerworld*, you'll discover several users harvesting these and other business-critical benefits from a single, multi-purpose operating system.

*Be sure to watch for "Are You Getting What You Need From Your Network Operating System?"*

## VeriSign Bundled With Acrobat 4.0

In conjunction with Adobe Systems Inc.'s launch of Acrobat 4.0, VeriSign Inc. is bundling its new VeriSign Document Signer with Acrobat's collaboration and annotation tools.

According to the Mountain View, Calif.-based VeriSign, the product lets users sign an Adobe Portable Document Format document within Acrobat, validating file contents and verifying the identity of the document's author.

The estimated retail price for the bundled product is \$249. An upgrade package for Acrobat 2.0 or higher has an estimated retail price of \$99.

[www.verisign.com](http://www.verisign.com)

## LAN Technology's Help Desk Ace 2.0

LAN Technology Solutions has announced HelpDesk Ace 2.0, software that helps LAN administrators identify and resolve user PC problems.

According to the Camarillo, Calif., company, the client/server software creates trouble tickets using an Access 97 database from Microsoft Corp.

Pricing ranges from \$99.95 to \$149.95.

[www.lan-stuff.com](http://www.lan-stuff.com)

## Token Ring Adapter Card

Olicom Inc. is shipping GoCard 3250, a Token Ring network adapter for CardBus-compliant notebooks.

The adapter card supports remote LAN-initiated wake-up technologies and complies with Microsoft's Onboard specification, which enables instant availability of PCs from powered down states.

It includes a new chip set designed to improve performance over previous-generation 16-bit cards, according to the Richardson, Texas, company.

The card is priced at \$298.

# PROTECTING YOUR WEB SITE AGAINST CREDIT-CARD FRAUD

AI tools can reduce risks, but fresh phony cards are a click away

BY CYNTHIA MORAN

**E**LECTRONIC-COMMERCE merchants focus on making customers feel safe inside their virtual stores (see story, page 24). But achieving that same level of protection for merchants themselves is a much tougher proposition that IT managers say isn't happening fast enough.

"It's like we're triple-locked the bank vault only to get nudged on the sidewalk outside," said Danny Sullivan, a webmaster who recently uncovered a major online credit-card scam in the U.K.

"One of two people with stolen credit cards can skim the profits right out of a Web site," said Jim Shanks, CIO at computer retailer CDW Computer Centers Inc. in Vernon Hills, Ill.

Think it's tough to steal a credit card? Computerworld's 10-minute Web search turned up a half-dozen credit-card generation applications, bank-identification system guides and instructions for "carding," or using stolen cards. And that's only one method thieves use.

## How the Crooks Work

Credit-card numbers have a built-in mathematical test, known as a "checksum." Card-generation applications take known bank numbers — the first four digits of a major credit-card number — and generate mathematically valid card numbers that pass the checksum test.

Carding, however, requires extra work to determine if the card is active. It's much easier to purchase stolen cards: A valid credit-card number and expiration date can be had for as little as \$25 online, said

Ramzi Saffouri, a consultant at fraud-detection software maker Advanced Software Applications Corp. in Pittsburgh.

According to the Federal Bureau of Investigation, you can buy the magnetic stripes and holograms to create a counterfeit card online for about \$40 per set (see photo below).

Many commerce sites, especially smaller ones, fail to adequately protect customer databases and are vulnerable to attack by thieves seeking credit-card information, Saffouri said.

Banks and large electronic merchants are well-protected, he said, but "it's much easier to break in to the retailer's sys-

tem. But 'you don't have to be a computer genius to steal credit-card numbers — you just have to work in a restaurant or video store," Saffouri pointed out.

## Reducing Fraud

"Fraud rates between 8% and 20% aren't unusual for new merchants. But if you follow correct procedures, you can get it below 1% or 2%," said Audri Lanford, owner of Netrageous Inc. in Olney, Md., whose Internet Scambusters site ([www.scambusters.org](http://www.scambusters.org)) serves around 50,000 electronic-commerce merchants.

Banks and credit-card processors use artificial intelligence systems to discover anomalies in a cardholder's buying routines. Merchants can buy those services and take the transaction check entirely off-site — a technique experts said is effective but costly.

Even then, "We've learned that you have to have a human behind every Internet transaction, monitoring the process," Shanks said.

"The more it costs, the more someone will try to steal it," said William Headpohl, president of electronic software distributor BuyDirect.com Inc. in San Francisco. "One of our first defenses was not to sell the really expensive products online."

The best defense institutes screening practices based on online retailers' most typical sales. Administrators flag addresses that don't match and other suspicious details. "We triangulate," Headpohl said. "It's just common sense, if they say they're from the U.K., their card is Japanese and the ship-to address is in Beverly Hills, call and check."

Many merchants, including

airlines, refuse transactions in which the shipping address doesn't match the billing address on the card.

A high percentage of fraud originates with free e-mail addresses such as those from Microsoft Corp.'s Hotmail and JunoMail from Juno Online Services LP. Ditto for requests for overnight shipping — after all, what do thieves care about costs?

## Banks Chip In

Banks sometimes will assume at least part of the liability for fraud if a merchant agrees to perform additional checks. "If we ship to the same bill-to/ship-to address, we call them to verify and we document that — some banks won't charge us. And our developers agree to reimburse us for our costs in a fraudulent transaction," Headpohl said. "That way, we both lose the profit we would have made, but no more."

Electronic-commerce security managers shouldn't rely too heavily on expiration-date

checks, said one industry insider. Some systems test only whether the card has expired, not if the date matches that of the specific card.

Credit-card generators may produce only a few valid cards out of hundreds, so thieves often rapidly rotate large numbers of cards through Web sites.

"They can run 100 or more cards per day," one security specialist said. Sites counter that technique with velocity checks, which filter out sequential card submissions from the same IP address.

International transactions require caution, especially from the former Soviet republics, Netrageous' Lanford said. One merchant now requires first-time buyers overseas to use safer payment methods such as international money orders, while others call the cardholder's bank directly to verify, she said. ■

## MORE THIS ISSUE

For a look at the business reality of online credit-card fraud, see page 24.

COUNTERFEIT CREDIT CARDS can be created online at sites like this one.

item. Increasingly, we're hearing about thieves stealing servers" to obtain credit-card data they hold, he said.

Or a thief may set up a "gypsy" site to steal cards. "They'll claim to be a familiar merchant with unbelievable prices, take orders for a few days, get hundreds of valid cards and then shut down," later selling the information to the highest bidder, Saffouri said.

Other crooks "pretend to be [America Online Inc.] officials and ask for billing confirmation," said Bill Burnham, an electronic-commerce analyst at Credit Suisse First Boston Bank in San Francisco. "There's always a newcomer who'll believe them."

## Fraud Terms Defined

**Address Verification System (AVS):** A system for matching a cardholder's address with bank records used by several companies, including the U.S. IRS system, generally don't cross national borders.

**Carding:** Cloning and using stolen credit-card numbers.

**Card generator:** Software that can make and sometimes test credit-card numbers.

**Cardholder Verification Value:** Identification code on a card's magnetic stripe in a face-to-face transaction, this number must match the corresponding code at the cardholder's bank.

**Card-present transaction:** Also called a face-to-face transaction, this is a transaction involving the physical credit card, where the merchant has the cardholder's signature and magnetic stripe for authentication. The bank is liable for fraudulent-card-present transactions unless it can prove merchant carding negligence.

**Phone bill:** The minimum amount that triggers verification of

a transaction. In Europe, the floor limit is the equivalent of \$100 in U.S. currency; a \$500 transaction isn't verified. There's no U.S. floor limit; all transactions must be authorized.

**Super site:** A Web site masquerading as a legitimate merchant, promising fabulous deals to those who buy with a credit card. The merchant doesn't exist; the webmaster collects credit cards for resale.

**Mail-Order/Telephone Order (MOTO) transaction:** In which the credit card isn't present, generally in purchases made by mail, telephone or electronically. Because there's no magnetic stripe or cardholder signature, the merchant absorbs the loss if the transaction is fraudulent.

**Blomberg:** Copying the cardholder data encoded on a credit card's magnetic strip for incorporation into a white card.

**White card:** Illegally reproduced credit card, including its magnetic stripe and hologram.

— Cynthia Moran

# Palms aweigh!

There are updates and accessories galore to pump up the super-star of handheld devices

By Russell Kay

**T**HE PALMPILOT was the first really popular personal digital assistant (PDA), and it has quite a selection of hardware and software accessories, far larger than for any of the original Windows CE handhelds or the newer, palm-size CE machines. So what add-ons does the Palm sport these days? In looking at many accessories, I learned a lot about what makes sense and what doesn't for this class of machine. The highest-tech hardware turned out to be more curiosities and gadgets-for-their-own-sake than helpful accessories (see story below). The hardware that makes a real difference to the Palm user is much more basic: a good case, a better stylus and a way to clean the screen without damaging it.

## A Federal Case

When I started carrying a Palm full time a year ago, I soon discarded its plastic screen cover, which usually got in the way. But I still wanted to protect the unit. Looking at other types of cases, I learned that protection comes at a price — that the right case depends a lot on lifestyle and work habits. There's a trade-off between bulk and features. The naked Palm is a slim, shirt-pocket-

size unit. Put it in any case, and suddenly it's a lot bigger.

If you're on the go and don't want to be encumbered, the belt-clip models from 3Com, PalmPilot Gear H.Q. and others are a convenient way to go. Of all the cases I tried, those add the least bulk. However, you have to remove the Palm from the case to use it.

The Devlin Enterprises DV78 Supreme Wallet Case (\$60) is a nicely made, midsize leather case with a shaped leather carrier for the Palm (there are other models for bare and modem-attached units) along with a notepad,

space for stylus or pen and slots for credit cards, cash and more. This case makes no pretense of fitting into a pocket, but it could be a good choice for anyone who routinely carries a briefcase. Of course, if you're into prestige leather, you can get even nicer (and pricier) cases from Dooney & Bourke and Coach Leatherware ranging upward of \$100.

I tried two hard-sided cases, HRP Products Inc.'s \$20 POD (Protective Organizational Device) made of plastic foam and Rhinoshin Inc.'s \$100 Cockpit, made of industrial-style titanium. They offered great

protection, but each made an awkward package that was too big for a pocket and lacked carrying clips or straps. Moreover, using the Palm inside these cases was much less convenient than with other styles.

I didn't find any case that offered what I really wanted, but I was happiest with a small leather case (the \$22 Copilot from E&B Co.) that also carries a few credit cards. Like most cases, the Copilot makes the pocket-size Palm too bulky. It will fit into a jeans pocket, but it makes a big lump. Still, the Copilot was the best compromise for me.

## Stylistic Differences

All the Palm models from the original PalmPilot to the newest Palm V stow their stylus in the unit. For many users, especially those with big fingers, these stylus are too short, too lightweight and too thin. The IIIi and IIIx stylus are the best of the lot — with a heavier, metal center section — but still awkward. Because the stylus is a primary input device, many accessory stylus are available.

I tried an all-metal unit from

## Three Short Takes: Sex and the Single PDA

The assignment was exciting: Round up and review the newest, neatest PalmPilot III accessories. Doing it was an eye-opener, though, leading to unexpected conclusions about what's important and what isn't for this PDA. I found that all the highest-tech accessories, the latest hardware, worked pretty much as advertised, but I also learned that I didn't particularly want or need to use any of them.

### PALM MODEM:

Using the Palm with the \$29 3Com 14.4 K bps modem for e-mail is possible but not nearly as useful as I'd hoped. If at all you ever do get short messages without attachments and send even shorter messages, then the Palm will do. The modem works, the

software works, but it's all pretty basic. Using the Palm's Graffiti handwriting recognition for creating long replies wears quickly and caused me to shorten my outgoing messages considerably. That's my observation, and I know folks who feel differently. I also used the modem with AvantGo Inc.'s software for Web browsing. I don't recommend this. It's like the talking dog. The wonder isn't how well it performs but that it performs at all. Without color graphics, a better screen and a faster modem, the Palm platform isn't well-suited to the Web.

### PALM NAVIGATOR:

This \$40 modem-size attachment from Precision Navigation Inc. turns your Palm into a pretty accurate map-

netic compass. You can use it with maps stored on the Palm, but overall it seems of limited use. It doesn't work inside a car, for example. It doesn't claim to be a poor man's Global Positioning System — and it isn't.

### THE QWERTY KEYBOARD:

A small, \$70 keyboard with full-size keys that your Palm plugs directly in to sounds like a convenient alternative to Graffiti handwriting input. But because

the Palm, like most PDAs, can hook into and exchange information with your PC, you've already got a decent keyboard for inputting data about through a two-step process. However, if you use the Palm without ever connecting to a PC, the LandFolio Inc. keyboard can be very useful.

— Russell Kay

Panache PDA (S15) that fit into my Palm III's built-in stylus slot but lacked a projecting rib to help remove it. I really liked writing with this stylus, but getting it out was slow, awkward and frustrating.

Pen-like stylus are widely available, including several Cross Pen models at around \$30 and up. More interesting, however, is the \$30 Platinum Executive from Palm Pilot Gear H.Q., which offers the convenience of a PDA stylus, a 0.5-mm pencil and a ballpoint pen in a single, twist-cap stainless-steel unit (colors are \$5 more). Less fancy, plastic triple-threat units cost only \$8 to \$50.

Concept Kitchen recently unveiled a PenCap Stylus, but I'm still most intrigued by its \$20 Fingertip Stylus (see photo above). You put this unique and attractive sterling silver cage over your index fingertip, then write with it. It does take a little getting used to, but it's both comfortable and effective. The main drawback is the lack of a pocket clip to stow it when it's not in use.

### Clean and Careful

The PalmPilot III screen rarely is bright enough for me, even when backlit, so keeping it clean provides clarity and prevents dust from scratching the screen. Concept Kitchen has an interesting array of products dedicated to PDA maintenance. Its \$50 PDA Survival Kit includes the Fingertip Stylus (described above), a year's supply of two-part screen-cleaning pads, special cleaning cloths for daily maintenance and a set of replaceable plastic screen overlays called WriteRites.

These protect the screen against scratching, and their textured surface gives your stylus a more pen-on-paper feel, though they do decrease visual contrast. The kit works with all PDAs, not just Palm products.

### Speaking in Tongues

The latest software I found was Concept Kitchen's Small Talk, an \$80 language aid that goes well beyond the usual dictionary model. Available for German, French, Italian, Spanish and Japanese, Small Talk takes advantage of the Palm's portability.

You tap an icon to select from eight categories: basics, transportation, lodging, money/shopping, emergency, business, food and entertainment and social. This brings up subcategories, and another tap gives you a group of questions or statements.

Tap the one you want, and hand the Palm to the person you're communicating with. He sees the query plus several possible replies, all in his language. He selects a reply, taps "translate," and hands the unit back. This is a surprisingly useful way to get some basic needs met in an unfamiliar country.

### Where to Get the Stuff

In looking for accessories, I found the Web the best source. Computer superstores generally had few items in stock. 3Com ([www.palmpilot.com](http://www.palmpilot.com)) offers a number of accessories, mainly hardware. But the best overall source was PalmPilot Gear H.Q. ([www.pilotgear.com](http://www.pilotgear.com)), which offers a wide variety of accessories and an extensive selection of third-party software. Most Palm-related Web sites are linked in an extensive Web ring.

### Tips

- Most Palm software is downloadable in trial versions, so you can determine if it's what you want.
- Surf the Web and the Palm Web ring; you'll be surprised at the variety of software and information available.
- Don't expect too much from your PDA. It's not so much a computer as a really good datebook. ■

## Palm Update: V Earns Victory; X Hits the Spot

Right after finishing the accompanying review of Palm accessories, what should arrive but two brand-new Palm personal digital assistants (PDAs) from 3Com that address two of the most annoying problems I've encountered using Palms since their introduction in 1996: poorly lit screen and bulkiness when they're in a carrying case.

The **PALM IIIx** (\$399) updates the Palm III's too-dark liquid crystal display with a screen that's noticeably clearer, has more contrast and has a yellowish cast compared with the original greenish-gray. The backlight still can't be as bright as I'd like, but when you switch it on, the display changes to light characters on a dark background, which is more readable in the dark. Also, the IIIx comes with 4M bytes of RAM, double the Palm III's. Overall, the Palm IIIx is a slight but worthwhile improvement over its predecessor.

The **\$449 PALM V**, on the other hand, is a new machine that offers the IIIx's better screen quality (different color, slightly smaller but clear and sharp) in a package just half as thick. It manages this trick with an aluminum housing and by eschewing replaceable AAA cells for fixed, rechargeable batteries. 3Com claims the batteries are good for a week of normal use, though I didn't have time to verify this. Putting the V onto its new cradle (which can't be used with any older PalmPilot, III or even the newest IIIx) will automatically recharge it and let you sync up with your PC. With older Palms, you set screen contrast by turning a small wheel that's prone to inadvertent misadjustment. The V uses a harder software application.

The V's thin profile finally gives the Palm the portability it has needed. Now you

can put it in a case that fits in your pocket without stretching the seams. A new 33.6K bps/sec modem (\$169) is a flat package that snaps onto the back of the V, adding only 1/4 in. or so in depth, and a \$50 travel kit lets you leave the comparatively bulky cradle at home when you travel. Finally, a note of concern: The standard production unit I reviewed froze up on a few occasions, necessitating a hardware reset. But I never lost any data, and I expect Palm will resolve this problem.

Both the IIIx and the V use the same operating system, PalmOS 3.11 Synchronizing either with the PC was simple and straightforward.

So which Palm should you get? Overall, the IIIx is a good machine, well worth the \$70 premium over the now discontinued Palm III. But the one you really want to have is the Palm V. It's the next user-friendly Palm yet.

Neither of these new Palms is the ultimate small handheld, though the V is the most powerful and convenient pocket organizer I've used. Palm aficionados are eagerly awaiting the release of the Palm Vm, which will incorporate a wireless modem for instant e-mail and Internet service in major population areas. The Vm is due out later this year, but given my personal experiences using the Palm IIIx as a communications device, I'd be surprised if the new unit is much more useful overall than the handy, dandy Palm V. — Russell Kay

THE PALM V is a bit pricier than the IIIx but is more useful than its cousin.

## BRIEFS

NT-Based  
Tivoli NetView

Tivoli Systems Inc. has announced Tivoli NetView-IT Director Edition, network management software for small to midsize businesses. The Windows NT-based software detects and reports device problems on networks with fewer than 1,000 nodes, according to the Austin, Texas, division of IBM, and includes a centralized Web-management console.

Pricing starts at \$4,995 and includes licensing for 1,000 nodes.

[www.tivoli.com](http://www.tivoli.com)

SGI Woods  
Developers

Silicon Graphics Inc. is migrating some key graphics technologies from its Irix Unix operating system to the open-source community, where developers can freely use them to develop software based on the operating system. The move is seen as part of the company's bid to attract more application developers to its platform — particularly in the low-end graphics market.

Who's  
Buying What

NEW YORK LIFE INSURANCE CO. has selected Warren, Va.-based MANICONTROL INC.'s MCE/Power suite to manage its IT assets and associated business processes. TTI INC., a Fort Worth, Texas, electronics parts distributor, has purchased Raleigh, N.C.-based GSP Inc.'s GSP Financials General Ledger system to automate its major accounting processes. PREMIER INC., a Charlotte, N.C., company that buys goods and services for more than 800 hospitals, said it's buying Contract Administration and Reporting System, software

developed by SYSTEMS CONSULTING CO. in Portland, Maine. DIAGEO PLC's United Operations and Veterans division said it plans to standardize supply-chain planning on software made by MANUJUSTICS INC. in Rockville, Md.

Web-to-Host  
Connectivity

NetManage Inc., a Cupertino, Calif.-based vendor of PC connectivity software, this week is expected to release altConnect, a suite of Web-to-host connectivity products for linking PCs to Unix servers and IBM AS/400s. A single-user interface will let any browser-enabled PC or terminal access data in both environments.

Allied Telesyn  
Unveils Switch

Allied Telesyn International this week will announce a switch with 24 10M/100M bit/sec. ports and two 100M bit/sec. uplinks. The Sureway, Calif., vendor's AT-8292R, supports Web-based management and virtual LANs on a per-port basis.

The switch is shipping. It costs \$2,030.

[www.alliedtelesyn.com](http://www.alliedtelesyn.com)

Java Appliance  
Update

More good news for consumer desktops that sports to be Internet devices: A new Java appliance, the Open Service Gateway Specification, intends to create standards for connecting Java-based devices ranging from PCs to washer/dryers (see story, page 66). The alliance includes IBM, Sun Microsystems Inc., Oracle Corp. and other notables. Watch this space for budding developments.

[www.esgi.org](http://www.esgi.org)

FRANK HAYES/FRANKLY SPEAKING

## The Secret of Linux

**L**AST WEEK WAS LINUXWORLD EXPO. You couldn't help noticing. Every television and radio business show trotted out an expert or two to try to explain just what this Linux thing is. The experts weren't exactly clear. Fortunately, I took notes. According to the experts I heard, Linux is free — except most people pay about \$50 for it. And it was written by one guy from Finland — and also a few thousand other people. And they're all working for free — except the ones making money from it. Best of all, the Linux source code is freely available. What's the source code? Well, it's sort of like a blueprint, or a set of plans, or a diagram, or — hey, we're out of time!

The mass media did a pretty good job describing the Internet and even Java for ordinary businesspeople. But Linux baffled them. Maybe that's because there's a dirty little secret hidden beneath Linux's open-source, group-developed, hacker-philosophy, buzzword-happy surface.

That secret: Linux is just software.

Not a revolutionary paradigm shift. Not the end of the software industry or even Microsoft. Not a religion, at least not for corporate IT people. Just another piece of software. Is it the product of radical free-software fanatics? Maybe. Who cares? The politics of Linux's programmers matters not at all to a computer. Either it works or it doesn't. It runs or it crashes.

Giveaway software isn't exactly a radical idea these days. Just ask those wild-eyed anarchists at Netscape, Sun, Microsoft and IBM. And providing source code isn't just an old notion, it's positively ancient — IBM did it routinely until the 1960s.

Linux isn't even free — not for corporate IT shops, anyhow. Add up the costs of installation, testing, support, training and the political infighting that comes with any new technology in an IT shop, and your total cost of running Linux is about the same as NT, Unix or anything else. The "free" sticker price is a tiny fraction of that cost.

No wonder big vendors — IBM, Hewlett-Packard, Compaq, Sun, SAP — are lined up for Linux. It sounds radical, big and free. In practice, it's still just software. IT customers will kick the tires, run it through evaluations and try it on pilot projects just as we would with any other product.

That's all. Not exactly revolutionary. Unfortunately, all the bafflebag tends to

obscure the few questions we should be asking about Linux. Should you pay for outside support? (Probably, unless you want to be in the operating system business.) Should you let your in-house developers make changes to the source code? (Probably not, unless you love

version-control hell.) Is there any real benefit to having source code? (With it, vendors can't force you to upgrade to the current version just to get a bug fixed — a tactic many users faced when doing their Y2K fixes.) Should I really consider software written piecemeal by thousands of programmers in an anarchic development setting? (Well, you're looking at Windows 2000, aren't you?)

Those aren't questions the mass media is going to answer for an ordinary business audience. They're IT-shop questions. And despite all the hype, hope and hoopla, Linux simply isn't something TV and radio can explain to a mainstream audience in three minutes of sound bites.

Maybe by the next Linux bash, they'll figure that out. And we won't have experts all over the tube explaining to ordinary folks that source code is really more like a

movie script — whoops, we're outta time!

Hayes, Computerworld's staff columnist, has been looking for a good way to explain source code for 20 years. His e-mail address is [frank\\_hayes@computerworld.com](mailto:frank_hayes@computerworld.com).

# Copper Microprocessors

BY APRIL JACOBS

**I**N THE RACE for faster processors at lower prices, IBM marched forward last year and introduced a copper-based chip that provides a smaller and faster generation of microprocessors.

In a nutshell, a copper-based chip, as opposed to the traditional aluminum-based chip, contains copper wiring.

The wiring within a chip connects the transistors to one another. The transistors are basically the brains of the chip.

## Thinner Is Better

The main benefit of copper-based wiring is that copper is a good conductor of electricity, so wires can be much thinner than aluminum and each chip can hold more transistors, making the chip smaller.

In processor technology, microns measure the distance between each component. One micron equals one thousandth of a millimeter — a micron is so small that one human hair is about 50 microns wide.

The shorter the distance an electron travels between transistors, the faster it can get there, and that means better performance.

Copper chips are

down to 0.18 microns today and are expected to eventually drop to below 0.13 microns.

On the other hand, the distance between components in today's aluminum chips, such as the Pentium processor, is 0.25 microns.

The next generation of Pen-

tium processors will reduce that measurement to 0.18 microns, and developers plan to reduce that even further to 0.13 microns.

At that point, aluminum will hit a performance wall.

And that limitation is forcing manufacturers to find alterna-

tives to aluminum. A chip can hold only so many transistors, and at a certain point, transistors lose their ability to conduct effectively, says Amir Ahari, an analyst at Framingham, Mass.-based International Data Corp.

But there are some draw-

backs with copper technology, according to Michael Slater, an analyst at the "Microprocessor Report" newsletter.

Copper typically requires putting in extra layers of material to isolate it from the chip in the chip.

This multilayering requires different manufacturing and design processes, which means an initial start-up expense for vendors choosing to make copper-based chips. ▀

Jacobs is a freelance writer in Dover, N.H. She can be reached at [ajacobs77@aol.com](mailto:ajacobs77@aol.com).

## AT A GLANCE

### What the vendors are doing

According to analysts, vendors aren't rushing to manufacture copper chips because it's a very complex and expensive process. Following are the plans of some major vendors:

#### ■ IBM

Debuted its PowerPC 750 copper-based chips in September based on 0.18 micron technology.

#### ■ Apple Computer Inc.

Introduced G3 computers, which feature copper based PowerPC processors running up to 400 MHz.

#### ■ Motorola Inc.

Motorola and Advanced Micro Devices Inc. signed an agreement last summer to codvelop copper chips.

#### ■ Intel Corp.

Plans to implement copper-based chips but believes the technology won't be competitive until the next generation of chips based on 0.13 micron technology come to market.

## DEFINITION

A copper microprocessor uses copper to connect transistors. Copper is a better conductor of electricity than aluminum, the metal used in most chips today. Copper chips offer faster performance and lower power consumption and are smaller.

## BY THE NUMBERS

### How small is a micron?

One micron equals 100mm. The diameter of an ordinary penny is about 18,500 microns.

If this were a copper chip, you would need to leave 0.18 microns of space between each 0.18-micron copper wire — and this penny could fit more than 51,350 wires.

Jacobs is a freelance writer in Dover, N.H. She can be reached at [apjacobs77@aol.com](mailto:apjacobs77@aol.com).

## DEFINITION

A copper microprocessor uses copper to connect transistors. Copper is a better conductor of electricity than aluminum, the metal used in most chips today. Copper chips offer faster performance and lower power consumption and are smaller.

### Copper

- Faster performance
- Wiring can be scaled down without losing integrity
- Requires less power since electricity passes more easily
- Requires more isolation and buffering than aluminum, creating more layers
- Requires a different manufacturing and design process because more layers need to be manufactured into the chip
- Initially expensive start-up cost for vendors because of the manufacturing issues

### Aluminum

### Copper

Now at 0.18 microns and has the potential to scale down to 0.13 microns and even lower

Now at 0.25 microns, but some say that aluminum will come down to 0.18 microns and possibly 0.13 microns but won't be able to go below that point without jeopardizing performance

### Aluminum

- Fewer layers, so it's easier to manufacture
- Less expensive right now because it involves no extra start-up costs

## BY THE NUMBERS

### How small is a micron?

One micron equals 1/100th. The diameter of an ordinary penny is about 18,500 microns.

If this were a copper chip, you would need to leave 0.18 microns of space between each 0.18-micron copper wire—and this penny could fit more than 51,350 wires.

## AT A GLANCE

### What the vendors are doing

According to analysts, vendors aren't rushing to manufacture copper chips because it's a very complex and expensive process. Following are the plans of some major vendors:

#### ■ IBM

Debuted its PowerPC 7445 copper-based chips at September based on 0.18 micron technology.

#### ■ Apple Computer Inc.

Introduced iMac computers which feature copper-based PowerPC processors running up to 1000 MHz.

#### ■ Motorola Inc.

Motorola and Advanced Micro Devices Inc. signed an agreement last summer to co-develop copper chips.

#### ■ Intel Corp.

Plans to implement copper-based chips but believes the technology won't be competitive until the next generation of chips based on 0.13 micron technology come to market.

# JOE FIRMAGE IS OUT THERE

He left the \$228 million Internet company he founded to spread the word: UFOs have visited us. Is he a true believer? Is he a charlatan? Is he a crackpot? Hell, is he right? By Sam Witt and Sean Durkin

**J**OE FIRMAGE does not seem crazy. His words do not echo like the proclamations of a zealot but rather are delivered in a controlled, deliberate, boardroom fashion. They sound like the words of a man who was forming a strategy for building Web sites one day — and forming a strategy for a techno-spiritual evolution the next. Somehow, Firmage's manner makes the progression seem natural.

Joe Firmage wants you to believe what he believes. To wit:

"You are a homo sapien animal, sitting at the top of an 8,000-mile-wide clump of geology, staring into an electronic communications system called 'the Internet'.... 2,000 revolutions around this globe since the birth of a man named Jesus. That's a more accurate picture of you in the eyes of the cosmos right now."

Joe Firmage says that without blinking.

Joseph P. Firmage, 28, founded USWeb, a leading Internet consulting firm, in 1995. Like his previous ventures, the company prospered wildly. For fiscal 1998, USWeb posted revenue of \$228 million — a 100% increase over the previous year.

During that year of intense growth, Joe Firmage was moonlighting — working on the Kalros Project, a Web site and book (due this summer) about human evolution and extraterrestrials.

Word got out. In January, Firmage posted his 700-page manifesto, called "The Truth" ([www.thewordistruth.org](http://www.thewordistruth.org)), which evokes both *Star Trek* and the New Testament. In the manifesto, Firmage asserts that extraterrestrials not only have visited us, but also have influenced our technological development.

A few days later, he resigned.

So is he a "crackpot," as USWeb/CKS (the companies merged shortly before Firmage left) board member Gary Reischel recently pronounced him, summing up what he'd heard from colleagues and investors? Or is he a maverick entrepreneur with disturbing ideas who is paying with his credibility for the strength of his convictions?

## Quiet Certainty

Joe Firmage does not look like a man who's spent 3 million of his own dollars researching extraterrestrials. In tony Los Gatos, Calif., in a living room almost too small for its opulent furniture, he speaks without flourish, with pregnant pauses and sustained eye-blinks as much as with bold words. He wears a discreetly trimmed beard and is dressed casually, as per the uniform of Silicon Valley executives (including mandatory cell phone, which periodically interrupts an interview). Out front in the driveway, a cardboard Jesus hangs from the rearview mirror of his red Corvette.

Firmage is both savvy and candid about all the attention the world is paying him. "I've been very open to the media for 10 years now in a business context," he says. E-t: "I've given nobody reason to question my sanity until six months ago."

Firmage, page 80

"I've got Windows NT  
where I want it."

## AS/400e=NT Integration

Now you can get the best of both worlds. Right here. Right now. Thousands of robust AS/400e business applications. And thousands of Windows NT<sup>®</sup> personal productivity apps. The good news: there's no need to stop running one to start the other. AS/400e or NT? Choose both at [www.as400.ibm.com/NT4](http://www.as400.ibm.com/NT4)

right

IBM.

Continued from page 77

I'm just starting to get the PR structure to deal with the media."

When he first published his manifestos, the news stories tended toward predictable snickering, but Firmage says he believes "it's beginning to shift in the right direction. *Rolling Stone* is doing a good piece on us. Time's already done something. I'll be on the *Daily Line* [NBC], I just spent the whole day with ABC News."

How does he expect those TV interviews to go? "Everything can and will be used against me," he laughs.

#### Early Achiever

Firmage was born and raised in Salt Lake City, where his family belonged to the Church of Jesus Christ of Latter-day Saints ("It's a very cosmic thing," he says of the Mormon church). After finishing high school in a mere two years, a scholarship in physics led him to the University of Utah. Firmage left college

The two shared a brief conversation about space-time travel. When asked by the visitor why he should be given the chance to travel in space, Firmage said, "because I'm willing to die for it."

The following year was "the busiest time of my professional life," he says. "I held a 12-hour-per-day job at USWeb, with Kairos [the UFO project] growing to four to six hours per day. I had a simple system: daytime: USWeb; evening: Kairos."

A year after the visit, Firmage posted his manuscript online. A media flood followed. Then came investor jitters.

"For the record, I chose to step down," Firmage says. "And off the record, I chose to step down. That's the truth. I was not forced out. Now, had I not chosen to step down, I could well have been forced out. I've been 10 years in this valley. I know how the game is played."

Is there no room for visions like his in Silicon Valley? "I would like the answer

versal theories of physics underpin Firmage's belief in space-time travel. Zero-point energy refers to a theory that energy can be created from nothing, rather than matter. Gravitational propulsion is based on the concept that the force of gravity can not only be harnessed, but also engineered. Combined, the two provide the foundation for spacecraft capable of warp speeds.

Firmage's beliefs have backers. John Peterson, a futurist and head of the Arlington Institute, a nonprofit research group in Arlington, Va., is adamant about zero-point energy. "There's no question but that it's real," And Charles Ostman, senior fellow at the San Francisco-based Institute for Global Futures, says that, in 25 to 50 years, "we probably will have things like anti-gravity travel, time-space continuum manipulation — all the usual precursors [to] getting around the universe."

Not all scientists agree. In fact, not all sectors of extraterrestrialists agree. Dan Wertheimer, director of the University of California at Berkeley's Search for Extra-Terrestrial Intelligence program, calls Firmage's ideas "pretty vague ... you'd be hard-pressed to find any scientist that thought there was an ounce of credibility in his ideas."

#### Visionary or Crackpot?

You'd also be hard-pressed to find a Silicon Valley CEO who doesn't dabble on about vision and evolution and progress. If nothing else, Joe Firmage's story is the story of what happens when the vision becomes intensely personal, when public relations buffers melt away and the board runs for cover.

It's impossible not to wonder at Firmage's motivations. Is this story about a yearning for liberation from the corporate structure? (When USWeb and KES merged, Firmage was not named CEO of the combined company.) Is Firmage after a piece of history? Is this a publicity trick, a plan to get richer? (After all, that cell phone keeps ringing.)

Or is this as simple as one man telling his version of the truth — and paying for it dearly?

"What happens in the history of a world when its most advanced beings for the first time gain the power to break through its own gravity well?" Joe Firmage asks. "I'll tell you what it's called, it's called birth. If Earth is a living being, and we are created by the Earth, and we one day gain that power, the power to touch the fabric of space-time itself, and use it, tap it, to voyage — is that not literally a birth? And is not the history of humanity an incredible drum roll to the opening of the first real frontier? That's the vision that I see." ■

Witt and Durkin are freelance writers in San Francisco. Their partnership is called *Too Many Stars*. Their Internet address is [toomany@stirius.com](mailto:toomany@stirius.com).

## "The UFO phenomenon is absolutely legitimate." — Joe Firmage

in 1989 after his sophomore year to form his first venture: *Serius*, which began as a Macintosh program for his mother's greeting card business and quickly grew into a database software company. Result? "Within six months," Firmage says, *Serius* "closed \$7 million" in revenue.

In 1993, Firmage sold the company to Novell Inc. for \$24 million and a vice presidency. In 1995, he left to found USWeb.

According to Novell public relations manager Jonathan Cohen, the company considered Firmage a "valued contributor. ... We wouldn't comment on his beliefs or cultural activities."

#### The Real Deal

"I am convinced that the UFO phenomenon is absolutely legitimate," Firmage says. "I have sat across the table from people whose credibility is unimpeachable." People who have described to him in great detail their experiences as alien abductees, he says. Asked to mention names, he replies, "I can't."

The cultural activities Cohen mentions can be traced, Firmage says, to a vision he had early one morning in 1997, shortly before USWeb's initial public offering. A mysterious figure clad in white hovered over his bed, he recalls.

to be yes. But right now ... no." Maybe that's why, Firmage claims, there are several Silicon Valley leaders hiding their own belief in extraterrestrials the declines several times to mention names). Why the need to remain quiet? "Well, look what happened to me."

#### Man of Principle?

"Frankly, I admire the guy," says author and columnist Robert Cringely. "In a world filled with weasels who call themselves entrepreneurs and who will corrupt their business plan to fit whatever is this week's hot technology, Firmage stands out as a man of principle."

And now out of the boardroom, Firmage is free to discuss those principles. "I can say things I could never say" when at the helm of USWeb, he says. "Every single executive of a public company has to live that way." He says Steve Jobs and Bill Gates are exceptions who "have a measure of freedom that anybody just one notch down on that ladder does not have."

One of Firmage's goals, he says, "is to make things that have not been permitted to be spoken in open company, speakable. Things that deal with anomalies. Things that deal with spirituality."

Things like zero-point energy and gravitational propulsion. Those contro-

# Birth of Integrated Circuits

BY LESLIE GOFF

**T**HE FAIRCHILD Eight weren't thinking a lot about their legacy in 1958. They didn't see that they were on the verge of spawning a new industry, of planting the seed that would grow into Silicon Valley.

Had it not been for their research and development that year, the computer industry — our jobs, our way of life — might look quite different. Their ideas about how to efficiently mass-produce silicon-based integrated circuits, either directly or indirectly, made possible nearly everything that information technology is capable of today.

But at the time they were focused only on making reliable transistors and finding a way to combine many of them into a single device using silicon instead of the then-standard material, germanium. Silicon could withstand high temperature better than germanium.

"No one had any strong feeling that these devices were going to take over the world," says Jay Last, one of the eight. It wasn't until the mid-to-late 1960s that the Fairchild Eight's true legacy began to take shape.

In 1958, "[We] were all very busy and we never had any time to sit back and reflect," says Julius Blank, a Fairchild co-founder who now is a director at Xicor Inc. in Milpitas, Calif., a manufacturer of non-volatile memory devices.

Last, Blank, Eugene Kleiner, Robert Noyce, Gordon Moore, Jean Hoerni, Sheldon Roberts and Victor Grinich were a diverse group of young scientists, all in their mid-20s to mid-30s. They had come to the San Francisco Bay area in 1956

to work for William Shockley, who had won the Nobel Prize that year with John Bardeen and Walter Brattain for the invention of the transistor at Bell Laboratories. But the eight, disagreeing with Shockley over technology and management issues, left his start-up, Shockley Semiconductor, en masse in late 1957 to found Fairchild Semiconductor. Shockley called them the "Traitorous Eight."

The creation of Fairchild Semiconductor would establish a model for entrepreneurs for the rest of this century. Each of the men was promised stock options, a then unheard-of arrangement. They dispensed with job titles and had an open working relationship. "None of us went to business

school, but we turned out to be pretty good managers after all," says Kleiner, who later contributed to the expansion of Silicon Valley as a co-founder of the venture capital firm Kleiner, Perkins, Caufield & Byers. "It was an informal, hard-working and effective group."

With \$3,500 in seed money from Fairchild Camera, they secured a building on Charleston Road in Palo Alto, Calif., and set about building from scratch the equipment they would need to create silicon-based integrated circuits.

By 1958 they were making their own transistors, and Hoerni was perfecting the planar process, which ultimately enabled the team to manufacture integrated circuits using sil-

icon instead of germanium. When Jack Kilby at Texas Instruments, that year introduced what's regarded as the first integrated circuit using germanium, they felt affirmation rather than competition.

"We had the benefit of the planar patent, which enabled us to do this thing more monolithically than [Texas Instruments] at the time," Blank says.

Hoerni patented the planar process a year later, and Noyce constructed the first integrated circuit on a layer of silicon. An industry had been born.

"The first 50 years of transistors were very similar to the first 50 years of the Gutenberg press," says Last, a venture capitalist and publisher of fine-art books who now lives in Beverly Hills, Calif. "They happened 500 years apart, and they trace almost the exact same path: Both became mature industries within the

same amount of time. The [integrated circuit] changed the world the way the Gutenberg did — but even more so — by giving us this enormous ability to communicate." ■

# AS/400: SUBSTANCE OVER STYLE

Y2K conversion and system upgrades are driving up both demand and salaries for those with AS/400 skills

BY CARLA CATALANO

**T**HE IBM AS/400's mainframe image can't compete with the glamorous allure of the PC. But, according to Nate Viall, president of Nate Viall and Associates, an AS/400 recruiting and national industry research firm in Des Moines, Iowa, the AS/400 is a workhorse that more companies are making their server of choice.

The installed base for the AS/400 is "huge" right now, an enormous market with lots of opportunities and little career risk, Viall says. People finally are recognizing the AS/400 for its reliable operating system and its ability to seamlessly connect to other network devices, he adds.

Companies rushing to head off year 2000 glitches have generated even more traffic toward the AS/400. Another reason for the AS/400's popularity is its low cost of ownership and operation, says Steve Evans, director of information systems at the Professional Golfers' Association (PGA) Tour in Ponte Vedra, Fla. "We use two AS/400s and a bunch of Windows NT servers. No one is dedicated to managing the AS/400, yet we have three people focused on maintaining the NT servers," he says.

The most valuable employees are those who know more than one technology — and that's especially true for those employed at smaller companies in which most projects require a "mixture of technologies," Evans says. Most important, he says, is to "focus on business objectives."

To keep yourself marketable by learning about new products and skills that are transferable, "my advice for RPG programmers is to focus on technologies like Java [the AS/400 is migrating toward Java] that target both the AS/400 and other platforms such as NT," says Jim Duggan, research director for application development at Gartner Group Inc. in Stamford, Conn.

Also valuable for AS/400 programmers: Internet-related

skills, such as those employing Java and the Web language HTML; object-oriented languages and object-oriented design; event-driven front ends and object-oriented skills such as Visual Basic; and abilities in computer-aided software engineering development and enterprise planning.

## System Fluency Needed

Career-conscious professionals can beef up their AS/400 résumé by making sure their debugging and programming skills are sharp and that they understand the architecture, file system, capabilities

and nuances that make the AS/400 different from other platforms, says Steve Fillipi, manager of AS/400 OneWorld Server at J.D. Edwards & Co. in Denver. Fillipi, who is searching for an AS/400 engineer with C and C++ skills, admits it's a challenge to find qualified AS/400 people. "Our fallback approach is to recruit people with good programming skills and grow our own AS/400 expert from there," Fillipi says. He typically trains people on the server team so they gain detailed, critical skills, then moves them to other areas of the company to broaden the company's overall AS/400 strength.

"Recruitment is a two-way street," Evans says. "We do a lot of reference checking, a large amount of interviewing, and we encourage candidates to ask questions of staff as well." The PGA Tour staff has remained stable for the past two years, which Evans believes has more to do with the company than the technology.

"I'm paying 20% to 30% more for an AS/400 programmer than I would for a programmer with similar skills because inventory is so low," says Steve Cataldo, president of Wilmington, Mass.-based Software Concepts Inc., an authorized AS/400 reseller that develops distribution and manufacturing software strictly for the AS/400.

Salaries for experienced AS/400 programmers are increasing, except in the public and education sectors, where pay remains at the low end of the spectrum, according to Viall, who maintains one of the most comprehensive salary surveys specific to the AS/400. Although Evans agrees that there's been an "escalation of salaries in what has been a flat market for a long time," he doesn't attribute it solely to the AS/400 market, but to the overall IT labor market.

"Everybody's been predicting the death of the AS/400 since its conception, but it never seems to come about,"

Cataldo says. "You'll see a shift in technology from the RPG programmer to the Java programmer, but the AS/400 can accommodate both styles."

## Real Competitor

The AS/400 is a fierce competitor of Windows NT Server because it offers seamless connections to network devices without the problems associated with multitrendor products like NT Server, such as upgrades, vendor compatibility and so on, Cataldo says. AS/400 skills also offer job security, according to Cataldo. "Programmers can expand their skills to exploit new server-based functionality like serving up Web pages, E-mail, running client/server applications ... while preserving past skills related to transaction processing," he says.

Cataldo says a programmer trained on the System 38, the precursor to the AS/400, can write productive code today on the AS/400. And because the AS/400 still is popular as an economical transaction processor, those early skills won't become obsolete, he says. ▀

Cataldo is a freelance writer in Hopkinton, Mass.

## 20th-Century Headlines

The Newsweek in Arlington, Va., asked American journalists and scholars to select the 20th century's top 100 stories. The following are verbatim selections from the list:

**31. First mass market personal computers introduced.** (1977)

**32. World Wide Web revolutionizes the Internet.** (1989)

**33. Scientists at Bell Labs invent the transistor.** (1948)

**42. ENIAC becomes world's first computer.** (1946)

**51. American scientists patent the computer chip.** (1959)

**97. Bill Gates and Paul Allen start Microsoft Corp. to develop software for Altair computer.** (1975)

**NOW THAT'S SERIOUS SECURITY**  
Mind your laptops, Arthur Andersen warns. After a couple of thefts last week at the company's Chicago headquarters, its security department issued an e-mail warning to workers to keep their laptops locked down with cables attached to their desks. Any un-attended portable computers spotted by security patrols - as opposed to thieves - will be confiscated.

**NOT YOUR USUAL HACK**  
Well, it made a good story London's Sunday Business newspaper reported last week that crackers had seized control of a British military satellite and demanded a ransom. The Ministry of Defence denied the report that, but you'd expect that, right? However, it turns out the satellite's controls aren't on the Internet - just sending a signal to it would require building a microwave tower in southwest London, said Paul Beaver, a

**OLD NEWS**  
What's the opposite of Internet time? Health care IT execs were fuming last week after a U.S. Senate committee singled out their industry as the worst prepared for year 2000. The Senate report included Gartner Group statistics that

showed 64% of hospitals have no year 2000 testing plans, and 90% of doctors are clueless on year 2000. But those stats are a year old and aren't necessarily accurate today, the execs charged.

**OVERHEARD**  
Direct Marketing Association CEO Robert Wientzen, on a proposed California law that will force companies to tell consumers exactly what information is collected about them and why. "We're calling it the ball from hell." The head of one Linus company, surveying the show floor at last week's Linux World Expo. "They're like a big dysfunctional family that just came into money."

**spokesman for military analyst Jane's Information Group.** "You can't just move your satellite TV dish around." Beaver told the British Broadcasting Corp.

**spoke** spokesman for military analyst Jane's Information Group. "You can't just move your satellite TV dish around." Beaver told the British Broadcasting Corp.

**RUMOR MILL**  
Tired of waiting for Godot 5.0 - or Windows 2000? So is Microsoft's BackOffice development team. Until the specs are finalized - or at least close to it - it can't put together a version of the BackOffice server that will be packaged with Win2K. 3Com Corp. and Siemens AG are reportedly mum about rumors the German com-

pany will buy 3Com's division that makes equipment for cameras and service providers. 3Com reportedly will focus on its handheld Palm line and low-end networking. Siemens says it will split out its strategy this week.

**FRENCH WINDOWS**

**BROKEN**  
News services in France reported late last month that Microsoft's Windows 98 and Windows 4.5 have failed government year 2000 testing. Small and Medium Businesses Minister Marylise Létranchu said her ministry was assessing Microsoft's "possibility," adding, "It is extraordinary that a company which is supposedly at the cutting edge of technology has sold products which will not work after 2000." Guess that makes our whole industry, um, endemic. News editor Patricia Keefe thinks so: e-mail your news tips and tidbits to her at [patricia.keefe@computerworld.com](mailto:patricia.keefe@computerworld.com) or call (508) 426-8983.

## CHANGE YOUR DASHBOARD ANY WAY YOU WANT

IS IT THE ULTIMATE in futzware or the ultimate in user-friendliness? Visteon Automotive Systems, a unit of Ford Motor Co., has developed a car dashboard that's actually a computer display panel that can be reconfigured in infinite ways. Move the fuel gauge, eliminate the oil-pressure display, enlarge the speedometer, change the colors or show Internet information. The high-definition display could be available in less than five years, Ford says.

**THE HIGH-RESOLUTION dashboard display can be outfitted with a "background busy window" and navigational aids. "New features will be as easy to add as a new software package on a personal computer," the company says.**

## The 5th Wave

"I understand how the thumb is the pointing device, but why does this finger have to be the antenna?"

Tired of  
putting out  
one **fire** ?  
after another ?

Bring all your IT services

RELIES ON KINGSTON SERVER MEMORY.**

**Kingston Server Memory**

**WHY DOES AMERICAN AIRLINES CHOOSE KINGSTON® MEMORY** for its revenue management servers? Because it's tested under conditions far more demanding than any real world situation. And it comes with a lifetime warranty, so reliability is guaranteed. "We don't take chances when it comes to our servers," says Matt Walton, Manager of Revenue Management Technology Planning. "And we have absolute confidence in Kingston memory." Find out why more Fortune® 500 companies are choosing Kingston server memory. To see if you qualify for a free 90-day server memory evaluation, call Kingston at (800)435-0669. Or visit our website at [www.kingston.com/server](http://www.kingston.com/server) today.
